2019

Poco Digital Lighting Control

Introducing Poco Digital Lighting Control. Poco delivers powerful, low cost on-board lighting control through a compatible MFD or connected smart device and a simple, easy to install control module.

Suitable for new builds or refits, the Poco control module is compact and completely sealed. Because it replaces physical circuits, wires, and switches, builders will often find that they can save money while offering their customers the sophisticated control previously found only on high end yachts. And when installed with Lumitec's PLI-enabled lights, even more functionality is unleashed – without additional control wires. Multiple 'virtual circuits' can be connected to a single channel, allowing aftermarket installers to add lights and improve on-board lighting designs without adding any home-(wire) runs.

- Simple to install and configure
- Powerful, intuitive interface
- Saves money - saves time
