Electrical connections

The Guest Model 503 spot/flood light has two types of wiring connections.

They are:

- *Power supply wires* - the red (+) and black (-) wires that bring 12 volts DC power to the spot/flood light and to the control panel.
- *Control cable wires* - the small wires within a gray casing that carry your commands from the control panel to the spot/flood light.

CAUTION!
**DO NOT CONNECT THE CONTROL WIRES (with connectors)
TO ANY POWER SUPPLY WIRES.
DO NOT REVERSE THE RED (POSITIVE) AND BLACK (NEGATIVE) POWER WIRES.**

This spotlight requires a power source of 12-volt DC power that is capable of supplying 10 amps of current even when other equipment is operating. For best results, run two new power supply wires from the red (+) and black (-) power wires of the light directly to the main 12-volt DC accessory panel. Install fuses and fuse holders as shown in diagram. A 10-amp circuit breaker can be installed instead of an in-line 10-amp fuse. If the light will be mounted less

Precautions

DO NOT look directly into the spotlight or floodlight while it is operating.

DO NOT cover the light with a fabric cover or any other flammable material. Accidental activation may result in a fire hazard.

DO turn the spotlight toward the control station when not in use. If the spotlight is accidentally activated during daylight, the operator will be more likely to notice and turn the spotlight off before draining a battery.
