SUBJECT: Batch Coding

Gent-I-kleen includes a batch code on both containers and cartons.

Format: YYDDD 99

YY = the last 2-digits of the year. (2009 = 09)

DDD = the Julian Day number. The Julian day is a 3-digit number determined by counting up from 001 beginning on January 1 of any year. This number can also be found on many calendars. Be sure you take into account the differences between a leap year and a non-leap year.

A SPACE is required to separate the date portion from any additional batch tracking information.

99 = Daily Batch Sequence Number, beginning with 01 at the start of each day.

Some examples:

08212 03 would be used on the 212th day of 2008
(or July 30 -- 2008 is a leap year), the third production batch of the day.

09211 01 would be used on the 211th day of 2009
(or July 30 -- 2009 is not a leap year), the first production batch of the day.

09003 02 would be used on the 3rd day of 2009
(or January 3), the second production batch.

We will use customer-specific, private label code systems when requested. All other product coding uses a date code as presented here. This code will be required for all merchandise credits and/or returns.

Please contact our Technical Director, Gail Shermeyer, with any questions concerning our coding system.
