

AIS Antenna

VA162 high performance AIS Antenna

AN ANTENNA DEDICATED FOR AIS !

- AIS tuned 1.0m stainless steel antenna for masthead or other similar installations.
- Has SO-239 socket & mounting L-bracket. Perfect for installations where the lowest possible windage is a requirement.
- Although referred to as a masthead antenna, it is also suitable for mounting anywhere the L-bracket suits the location. Example mounting locations are along side solar panels, bimini side, on an arch, above a radar, or at the upper edge of a cabin top.
- A detachable cable makes installation and maintenance easier and allows for any length cable to be used. It easily mounts on a mast but is also suitable for mounting almost anywhere with it's included 316 stainless steel L-bracket.

Note: The VA162 is a dedicated AIS antenna. If the installation requires sharing one antenna between the VHF radio and the AIS transponder using a Vesper Marine SP160 Antenna Splitter, use the VA159 Antenna specifically designed for sharing with a VHF radio.

If sharing one antenna, use VA159 Antenna and SP160 Antenna Splitter

KEY FEATURES:

- Specially designed 1.0m (3ft) 316 stainless steel antenna
- Easily replaceable stainless steel whip if it gets lost or damaged
- Optimized for AIS
- Includes SO239 socket & 316 stainless steel mounting bracket
- Perfect for masthead or installations where the L-bracket suits
- Easily adapted to most any installation configuration
- Detachable cable allows for any length to be used
