

## Low Friction Ring Strap Eye 60415

### Low Friction Ring Strap Eye – For the concerning dinghy sailor

Barton has offered stainless steel deck eyes for a long while, but as performance on boats improves, the desire to reduce friction on deck fixings and turning points of lines becomes more important. By adding the low friction ring that is pressed into the stainless steel strap, it gives a low profile, and low friction rope guide for small lines.

This can be used with a range of lines for sailing boats using small diameter ropes. The HV500 anodised coating on the Low Friction Rings produced by Barton gives the ultimate performance and durability. The hard anodising feature means there is only 15% load bearing friction on this fitting.
