

The Captain

by Aqua-Vu®

Introducing The Captain: The Ultimate Outdoor Display & Dual-Camera System

Outdoors Insight, Inc., creators of the industry-leading Aqua-Vu underwater cameras, have launched The Captain—an innovative new display and camera system built for off-road and offshore adventures. This rugged, waterproof 7-inch HD display features dual cameras, integrated GPS, DVR recording, and seamless Apple CarPlay and Android Auto compatibility—purpose-built for UTVs, golf carts, boats, pontoons, and more. It's the ultimate system for outdoor enthusiasts and utility riders who want increased visibility, connectivity, and control.

Engineered for marine-grade durability, The Captain enhances the capabilities of any vehicle it's installed on. The system includes a glove-friendly touchscreen, front and rear HD cameras, and an integrated GPS mount for route tracking and on-screen data. With built-in DVR functionality, users can record their entire journey to a microSD card and access essential apps through Apple CarPlay or Android Auto. Flexible mounting options and expandable video inputs make The Captain adaptable to nearly any scenario—from daily utility tasks to backwoods exploration.

“When we designed The Captain, we weren’t trying to build just another screen—we wanted to build the brain for your recreational vehicle,” said Kolt Ringer, President of Outdoors Insight. “Whether you’re navigating trails, launching a boat, or cruising your neighborhood in a golf cart, The Captain delivers the awareness and technology to make it all easier, safer, and more enjoyable all while keeping your phone out of the sun, rain, and dust.”

Product Highlights - What is included

Display Unit

- 7" Ultra-Bright 4K LCD (3" x 7" viewing area)
- IP67 Waterproof & Rugged Design
- Apple CarPlay & Android Auto Compatible
- Recording: Removable microSD card slot for video capture and playback.
- Integrated GPS: Speed, Location, and Real-Time Clock
- 12V Power Input

Camera Display

- Dual 1080p Waterproof Wide-Angle Cameras
- Easy-Mount Brackets Included
- 30' Waterproof Extension Cables
- Sealed Waterproof Connectors

The Captain: CarPlay at the Helm, DVR on Guard

On the water, conditions change fast—sun, salt, rain, tight channels, crowded ramps. Phones overheat, get wet, and distract at the worst moments. The Captain is a purpose-built camera and display system that solves these problems with two simple ideas: run your essential apps on a bright, boat-ready screen, and record the entire day to an SD card—hands-free.

Why it matters

- Protect your phone. Keep it stowed and safe from heat, saltwater, and spray.
- Stay focused. Use built-in CarPlay/Android Auto for maps, tides, comms, and audio—no juggling a handset.
- Have the record. The always-on DVR continuously captures your run, approach, and on-water moments.
- What The Captain does
 - CarPlay/Android Auto at the helm
 - Plug in (or connect per your setup) and get familiar, full-screen access to navigation, messaging, music, and voice assistant—on a display designed for glare and spray.
- Continuous DVR to SD

The system records automatically while you operate. If an incident occurs—or a client lands a fish of a lifetime—you already have the footage. Loop recording keeps recent hours available without manual management.

Marine-ready design

Built for the realities of salt and sun. Clean mounting options, tidy cable runs, and simple power integration make it a straightforward install on consoles, T-tops, and helms.

Real-world uses

- Documentation: Docking scrapes, wake encounters, or near-misses are preserved in context.
- Professionalism: Share short highlight clips with clients after the trip—no one had to pull out a phone mid-fight.
- Training: Review footage to improve docking approaches, crew coordination, or route choices.

Simple to add to your boat

Mounting: Standard bracket or RAM-style options for consoles and T-tops.

Power: 12V with an inline fuse per the install guide.

Cameras: Position for forward visibility, docking, and deck action; adjust to prioritize safety coverage.

Tips from the field

- Angle the primary camera to capture bow traffic and docking lanes.
- Keep a labeled, waterproof case with spare SD cards; rotate weekly.
- Use offline map downloads for areas with spotty service.
- After each trip, trim a 15–30 second “client highlight” and file an incident clip if needed.

FAQs

Does it work without cell service?

CarPlay/Android Auto runs from your phone; many nav apps support offline maps. Cloud features (calls, texts, streaming) require coverage.

How long will it record?

Recording time depends on your SD card size and settings. The loop feature overwrites the oldest footage, so recent hours are always available.

Can I export clips easily?

Yes. Remove the SD card to transfer to a computer or follow your preferred workflow to move clips to your phone for sharing and archiving.

The Captain keeps your phone safe, your helm organized, and your day documented—so you can run the boat, serve clients, and let the technology work quietly in the background.
