

HDO[®]

MICROFIBER

RECOMMENDED TOOLS: DA 1

DESCRIPTION

NEW HDO Microfiber Polishing Pad!

The LC HDO Microfiber Pad System is a complete system designed to provide a systematic approach for effective DA paint correction. Each pad offers a unique combination of custom microfiber strands and foam interface for expertly tailored precision.

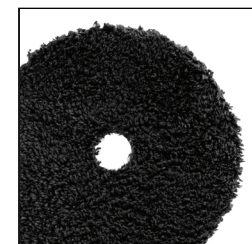

The LC HDO Microfiber Pad system consists of a heavy cutting pad, one-step pad, and a finishing pad.

FEATURE	BENEFIT
Precision Sizing	Engineered for balanced performance, precision sizing ensures even pressure distribution across the pad while providing the ideal material thickness. This design helps protect against backing plate contact with the painted surface, reducing the risk of damage during polishing.
Premium Bonding System	Our advanced loop system is designed to create the strongest possible bond to your machine's backing plate. Combined with premium bonding materials, this construction delivers superior durability and outlasts comparable pads on the market, ensuring consistent performance through repeated use.
Engineered Microfiber Blends	Each pad is engineered with a unique microfiber blend tailored to its specific function. By optimizing the fiber composition for every pad, we deliver the ideal balance of performance, efficiency, and ease of use across a wide range of polishing applications.
Simple System, Unlimited Possibilities	The Lake Country Microfiber Pad line uses an easy color-coded system to simplify pad selection.
	LC Microfiber OSP (One-Step Pad): A versatile option for general polishing, ideal in production environments where speed and consistency matter.
	Black LC Microfiber Polishing Pad: Provides a refined, haze-free finish on clear coat, single stage paint, and metal. White LC Microfiber Cut Pad: Designed for aggressive correction with fibers that resist matting, maintain cutting power, and reduce heat buildup for consistent results.
