DOMETIC

COOLER, QUIETER, MORE AIR FLOW

The FreshJet 3 Series rooftop marine air conditioner improves the way professionals and boaters cool their spaces, so they can cool down quickly—and stay comfortable. The innovative blower system quietly moves an average of 350 cubic feet of cool air per minute, providing a faster cooldown in hot ambient temperatures. With 13% more cooling power, users can focus on their time on the water or at work—without the heat.

EPP foam insulation on the inside of the unit reduces weight, provides protection, and reduces noise for more restful sleep or quieter operation. The advanced design and state-of-the-art materials offer one of the lightest weight rooftop air conditioners available for marine and commercial use. The composite base pan and shroud not only look modern but also save weight—so the load is light for the added journey.

Now upgraded with marine-grade durability, the FreshJet 3 Series features corrosion-resistant hardware and coated coils to withstand salt air and harsh environments. Built for reliability and performance, it's the ideal solution for vessels, mobile workspaces, and commercial applications where cooling power and rugged construction matter most.

FEATURES

- Cooling Capacity: 15,000 BTU / 4396W
- 13% higher cooling capacity compared to select rooftop air conditioners in the market today
- 15% higher airflow than select rooftop air conditioners on the market today
- 4dB less noise than select rooftop air conditioners on the market today
- 14% lighter than previous Dometic Brisk II air conditioner models
- Backwards compatible with existing Dometic and competitor air returns
- Ducted and non-ducted applications

COLDER & QUIETER FOR BETTER COMFORT

1. Unique Coil Design

Evaporator E-coated for enhanced durability

2. Increased Cooling

Unique design delivers powerful performance and uniform temperature

3. Quiet Operation

Produces less perceived noise than its predecessors
