Wave WiFi products offer outstanding performance because of the proprietary firmware technology embedded in each unit. The Web based firmware permits the user to scan for access points (Hotspots) and provides a detailed diagnostic of the quality of each hotspot.

The GUI (pronounced “gooey”) or Graphical User Interface allows the user to see the signal strength and quality in real time of any connected hotspot.

*Wave WiFi’s MBR550 Has a SIM slot for 3G / 4G SIM cards.*
