

LIFE LIGHT®

World's Finest Rescue Light

Life Light® is a state-of-the art, U.S. Coast Guard approved Life Jacket Light. **Life Light®** rescue light is a water-activated, LED flashing signal light to aid rescuers in locating a person adrift and in distress at sea.

Compact

Life Light® is lightweight and easy to attach to life jackets. Simply attach and know you will have a working rescue light should you ever need it. You can also attach **Life Light®** to a life raft, safety harness, work vest, EPIRB, ditch kit, VHF radio, ring buoy, even a dog's collar.

Water-activated

Activates when **Life Light®** becomes immersed in salt or freshwater. Will not activate with just splashes of water during recreational activities.

Over 300 hours of light

Life Light® flashes for over 300 hours, unlike other common competitor products that only flash for 8-12 hours

Visible up to 2.5 miles away

Rescuers will be able to see **Life Light®** from 2.5 miles away, ensuring they can find you faster.

Virtually Indestructible, No Maintenance Required

Unlike other products on the market, **Life Light®** will never corrode. There are no compartments to open, no switches to fail, and you never need to replace the batteries.

5-Year Life

Life Light® units have a five-year shelf life.

HOW IT WORKS

Life Light® innovative float system keeps the light pointed upward at rescuers. When in the water, the tethered light can float by your shoulder, not flashing in your eyes. The unique lanyard and float design system allows it to attach to any type of life jacket.

STEP 1

Pass end of lanyard through webbing strap of PFD. Pass **Life Light®** unit through loop of lanyard. Pull Snug.

STEP 2

Place Hook & Loop Strip in place through Life Vest attachment point.

STEP 3

Wrap Hook & Loop Strip around **Life Light®** securely.

Don't be left in the dark. Travel the water safely with Life Light.
