

INSTALLATION GUIDE

WARNING: To reduce the risk of injury, please read all installation instructions.

MICRO Battery Pak with Charger

Included hardware:

- A.** (1) Right battery bracket (pre-assembled)
- B.** (1) Left battery bracket (pre-assembled)
- C.** (2) Adapter bolts 2.75" (pre-assembled)
- D.** (1) 5/32 Allen key
- E.** (1) AC Wall Adapter
- F.** (1) Battery charger
- G.** (1) Battery Pak

INSTALLATION

Battery Bracket Installation Instructions

Slide the battery bracket onto the MICRO Driver Unit (**Fig. 1**).
Tighten the bolts with the Allen Key (**D**) (**Fig. 2**).

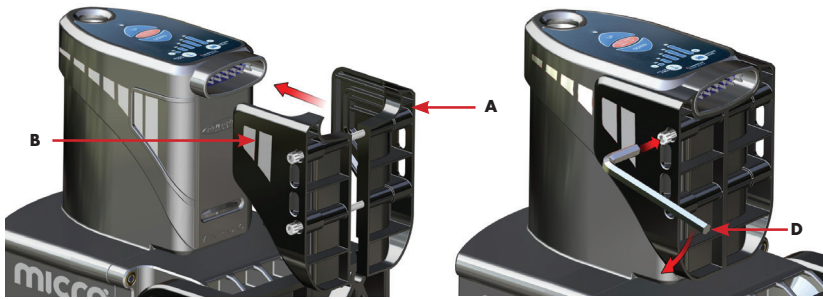

Figure 1

Figure 2

IMPORTANT: Tighten the bolts until the bracket does not move.

Attaching / Removing the Battery Pak

Push the Battery Pak into the battery bracket until it snaps into position (**Fig. 3**).

Figure 3

IMPORTANT: The Battery Pak should not move when attached correctly. To remove, press in on both sides of the Battery Pak to disengage the tabs. (**Fig. 4**)

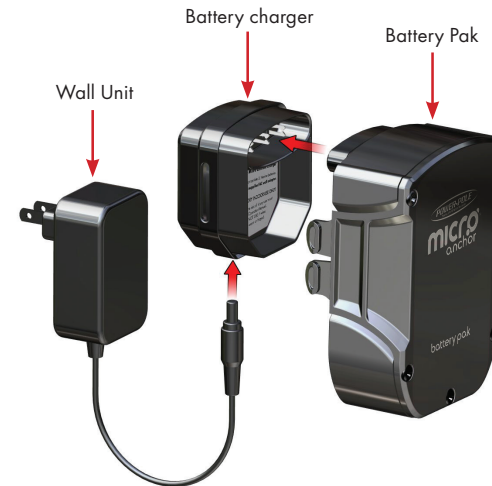

Figure 4

CHARGING

User Information: The Micro Battery Pak delivers up to 100 full deployment / retractions cycles per charge.

Charging the Micro Battery Pak

Plug the wall unit into a 110 Volt AC power source and then connect to supplied battery charger and Battery Pak.

Battery charger indicator lights

CAUTION:

Do not use the Power-Pole shallow water anchor as your primary anchorage. Never leave your boat unattended while anchored solely with the Power-Pole shallow water anchor.

GENERAL GUIDELINES AND WARNINGS:

- Read all warning labels before using the Battery Pak.
- Perform a full battery charge before use. For best results always charge at room temperature. Never charge near open flames or in direct sunlight.
- Use supplied Micro Battery Pak Charger only. Do not use any other charger. Failure to do so may cause a fire, which may result in personal injury and property damage.
- Your battery is electronically protected against over current, under and overvoltage, and under and over temperature. However, lithium batteries carry a risk of fire and burns. DO NOT open, crush, puncture, cool below 32° F Min or heat above 140° F Max, incinerate, or attempt to connect to battery contacts.
- Remove Battery Pak from Micro Driver Unit when not in use, storing, or prior to removal of Micro unit from boat.
- For longest battery life, store Battery Pak at or near a 50% charge at 32°F Min, 76°F Max. For long-term storage keep temperature as close to 32°F as possible.
- The Battery Pak comes with dielectric grease pre-applied into the connection area and should be re-applied every six months to ensure a corrosion-free connection.
- The Micro Battery Pak meets UN38.3 Transportation Shipping regulations.
