INSTALLATION INSTRUCTIONS BEGIN ON NEXT PAGE

NOTE: It is strongly advised that all installations are carried out by an authorized installer who possesses the necessary expertise and experience in marine equipment installation. Furthermore, prior to the final installation process, we recommend performing a dry fit assembly of all components. This entails fitting the components in their designated positions on the boat without permanently affixing them. This step allows for careful assessment of compatibility, alignment, and any potential adjustments that may be required before proceeding with the actual installation.
