

# **INSTALLATION GUIDE**

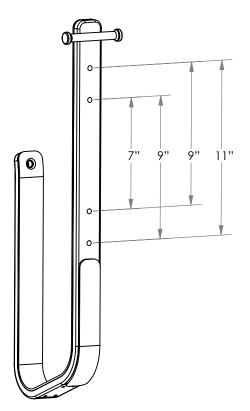

# **INSTALLING THE SINGLE BOARD RACK**

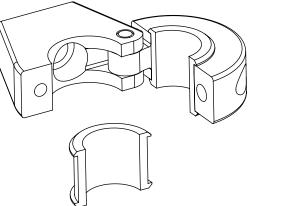

## STEP 1

Identify the clamp spacing that best fits with the stanchion you'll be mounting the rack to.

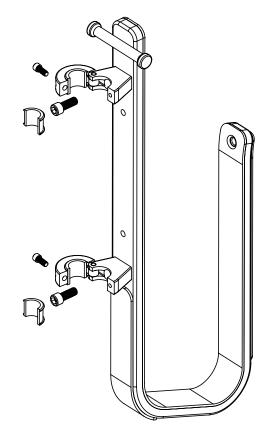

# STEP 2

Open each clamp by removing the fastener. If the rubber insert covering the bolt hole in the bottom of the clamp is covered, this rubber insert will need to be removed.

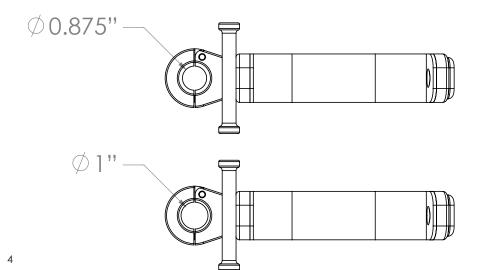

**STEP 3** Using the 0.375" bolts, fasten the clamps in place.

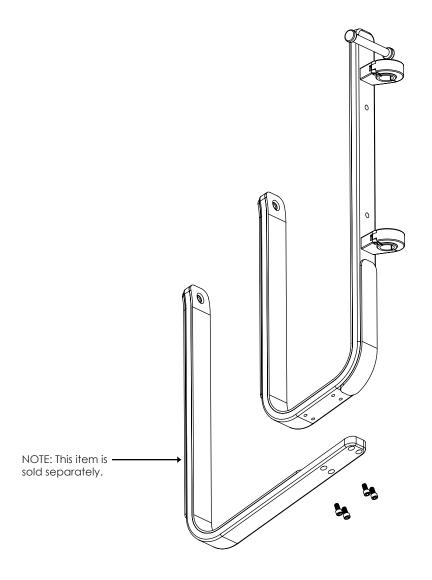

#### STEP 4

Measure the diameter of the stanchion and select the appropriate rubber clamp insert to be used. Rubber clamp inserts help to protect from scratches and also provide a secure grip.

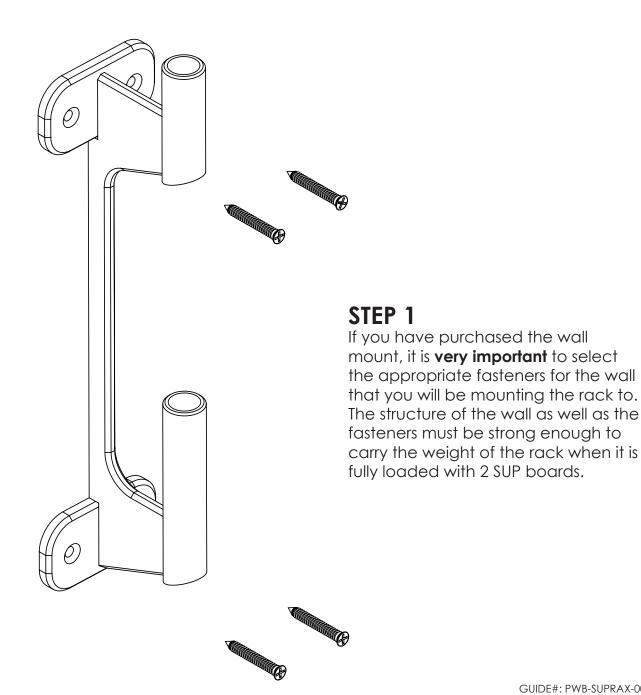

## **INSTALLING THE DOUBLE BOARD RACK**

Using the 1/4" fasteners provided, attach the additional rack to turn the system into a double board rack.

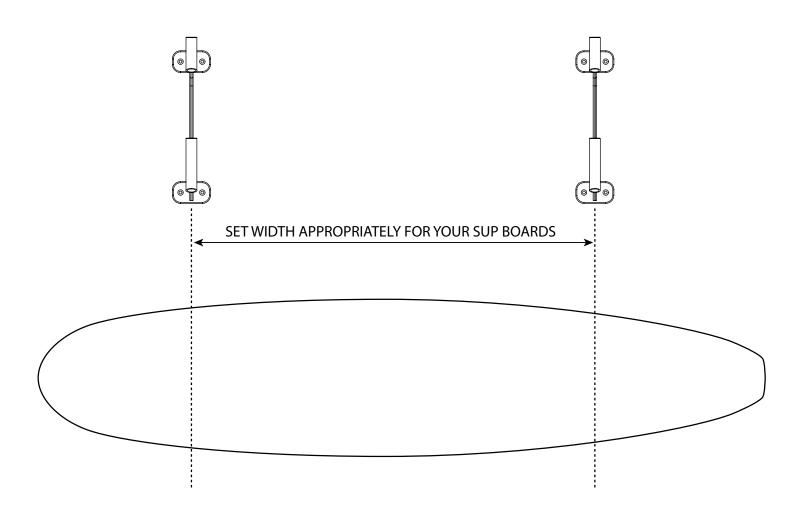

## **INSTALLING THE WALL MOUNT**

## STEP 2

Space your wall mounts the appropriate width apart to fit with the length of your SUP boards.

# **STEP 3** To install the board rack on the wall mount, slightly loosen the clamps and slide the assembly over the wall mount pins. Once in place, tighten the clamps so that they are securely fastened to the wall mount.
