TOOLS NEEDED

BEFORE YOU BEGIN

- Make sure that you do not drill within 1/8" (3.2mm) from the edge of the tapered plug.
- Drill tube is recommended. However, if using a drill bit, a slightly larger drill bit is needed for drilling the rubber.

1

Measure your cable diameter and select the appropriate drill tube provided. Cable diameter $+0.01/-0.03$

1A

1

Take one of the four drill tubes (included with the Retrofit Cable Gland). Double check to make sure the tube is the right diameter for your installation.

2

Insert drill tube into drill motor, and leave enough length to get through the tapered plug.

3

Apply small amount of soapy water to the tube and slowly drill the rubber plug.

1B

If using a drill bit, the drill should be run repeatedly through the rubber.

2

Using a sharp razor blade or knife, cut the rubber grommet from the cable hole outward.

3

Wrap the rubber grommet around the electronic cable.

4

Apply the rubber base gasket to the mounting surface.

5

Combine the two halves of the plastic base and mount onto rubber base gasket. Be sure to stagger the seams as shown by the two black arrows.

6

Secure the base to the mounting surface with the four screws. Apply marine sealant to the threads.

7

Slide the rubber plug down into the plastic base.

8

Combine the two halves of the outer shell. These will snap together with a click. Be sure to stagger the seams as shown by the two black arrows.

9

Apply marine sealant to the four allen head screws and tighten.
