

# OLAS Multiple Engine Connector

EXPOLASMEC wiring diagram

BLUE, GREEN and WHITE wires are signal wires. These should be connected to the engines signal wire

BLACK wires are the Ground wires. These should be connected to the engines ground wire

**WARNING:**  
For installation of multiple outboard engines the negative battery cable for each starter motor ground circuit, must be connected to each other by a common circuit cable capable of carrying the starting current of each engines motor.

White — Power  
Black — Ground

Purple — Open to stop (OS)  
Brown — Close to stop (CS)  
Grey — Common (CMN)
