MODEL	MIS210	MIS220	MIS230	MIS240
SIZE	Child	Adult Small	Adult Universal	Adult Oversize
BODY WEIGHT	44 - 110 lb. (20 - 50 kg)	110 - 200 lb. (50 - 91 kg)	110 - 300 lb. (50 - 136 kg)	225-375 lb. (102 - 170 kg)
HEIGHT	39-59 in (99-150 cm)	58-68 in (147-173 cm)	59-75 in (150-191 cm)	Max: 80 in (203 cm)

DONNING INSTRUCTIONS

1

Don the suit as you would a pair of coveralls.

2

Secure ankle straps. Pull hood over head.

3

Hood on, tip head back, pull up zipper by toggle.

WARNING

There is a risk of entrapment in a submerged compartment due to the buoyancy of the suit.

4 Jump Instruction

Hold nose; Hold arm against body with the other arm.

5

Inflate head support by depressing inflation tube cap and blowing into mouthpiece.

FOLDING INSTRUCTIONS

1

Lay the suit out flat. Unzip front zipper.

2

A . Roll feet upwards towards the waist.
B . & C . Fold arms across the front and roll the whole suit up.

3

Insert rolled suit into bag. Take care to prevent tight bends or folds in the open zipper.

MUSTANG SURVIVAL NEOPRENE IMMERSION SUIT

MAINTENANCE

MAINTENANCE INSTRUCTIONS TO FIT RESCUE LIGHT

This suit comes equipped with a special front neoprene pocket designed to hold a rescue light. To fit the light, insert bulb through hole in the light holder patch so that the dome faces out. Follow manufacturer direction for operation.

VISUAL INSPECTION

MUSTANG SURVIVAL recommends you inspect your suit before each voyage, or at least quarterly

1. Unpack the suit and lay it out flat.
2. Inspect all areas of the suit for visible signs of damage or degradation. Also inspect for rips, tears or small punctures.
3. Close and open zipper several times to check for smooth operation. Lubricate the inside and outside of the waterproof zipper with paraffin wax after each use.
4. The head support pillow should be inspected for damage. Inflate the pillow by depressing the mouth valve cap and blowing through the valve. The pillow should fully inflate and remain rigid.
5. Leave the pillow fully inflated for a period of 6 hours. At the end of the 6 hours, the pillow should still feel hard to the touch and maintain its general rigidity.
6. Check the inflation hose for leaks or kinks which could also inhibit inflation of the pillow. Any major leakage should be repaired by the manufacturer.
7. Deflate the pillow by pressing the top of the mouth inflation tube.
8. To store suit, always ensure it is fully dry prior to stowing in its stowage bag.
9. Always roll your suit feet first to the head area making sure that the head support pillow and inflation hose have no creases, fold in the arms and continue to roll suit lengthwise. Replace in stowage bag and always ensure that it is accessible in case of emergency.
10. Never compress your immersion suit by placing heavy objects on top of it, as this could result in loss of buoyancy or damage to the suit.

MUSTANG SURVIVAL recommends a complete inspection of your immersion suit by a factory authorized inspection & repair facility at intervals not exceeding every 2 years. Immersion suits 5 years or older should be inspected annually.

REPAIRS & REPLACEMENTS

Major tears, rips or punctures and chemical or heat burns must be inspected and repaired by the manufacturer or factory authorized repair facility.

CLEANING INSTRUCTIONS

1. Rinse with fresh water after each use. DO NOT DRY CLEAN.
2. Allow to drip dry before repacking.
3. Lubricate zipper with wax stick
4. Repack with zipper in open position.

CAUTION

Suit may not fit some individuals near high or low end of size range. Try on suit wearing garments you typically wear on the vessel.
