THANK YOU!

Thank you for choosing Humminbird®, the #1 name in marine electronics. Humminbird has built its reputation by designing and manufacturing top quality, thoroughly reliable marine equipment. Your Humminbird is designed for trouble-free use in even the harshest marine environment. We encourage you to read this manual carefully in order to get the full benefit from all the features and applications of your Humminbird product.

Contact Humminbird Customer Service at humminbird.com or call 1-800-633-1468.

WARNING! This device should not be used as a navigational aid to prevent collision, grounding, boat damage, or personal injury. When the boat is moving, water depth may change too quickly to allow time for you to react. Always operate the boat at very slow speeds if you suspect shallow water or submerged objects.

WARNING! The electronic chart in your Humminbird unit is an aid to navigation designed to facilitate the use of authorized government charts, not to replace them. Only official government charts and notices to mariners contain all of the current information needed for the safety of navigation, and the captain is responsible for their prudent use.

WARNING! Humminbird is not responsible for the loss of data files [waypoints, routes, tracks, groups, recordings, etc.] that may occur due to direct or indirect damage to the unit’s hardware or software. It is important to back up your control head’s data files periodically. Data files should also be saved to your PC before restoring the control head defaults or updating the software. See the following sections of your Humminbird manual: Manage Screen Snapshots and Recordings and Manage your Navigation Data: Import/Export Navigation Data.

WARNING! Disassembly and repair of this electronic unit should only be performed by authorized service personnel. Any modification of the serial number or attempt to repair the original equipment or accessories by unauthorized individuals will void the warranty.

WARNING! Do NOT leave the control head microSD or SD card slot cover open. The slot cover should always be closed to prevent water damage to the unit.

WARNING! Do not travel at high speed with the unit cover installed on the control head. Remove the unit cover before traveling at speeds above 20 mph.

NOTE: Some features discussed in this manual require a separate purchase, and some features are only available on international models. Every effort has been made to clearly identify those features. Please read the manual carefully in order to understand the full capabilities of your model.

NOTE: The illustrations in this manual may not look the same as your product, but your unit will function in a similar way.

NOTE: To purchase accessories for your control head, visit our Web site at humminbird.com or contact Humminbird Customer Service at 1-800-633-1468.

NOTE: The procedures and features described in this manual are subject to change without notice. This manual was written in English and may have been translated to another language. Humminbird is not responsible for incorrect translations or discrepancies between documents.

NOTE: Product specifications and features are subject to change without notice.

NOTE: Humminbird verifies maximum stated depth in saltwater conditions, however actual depth performance may vary due to transducer installation, water type, thermal layers, bottom composition, and slope.

ROHS STATEMENT: Product designed and intended as a fixed installation or part of a system in a vessel may be considered beyond the scope of Directive 2002/95/EC of the European Parliament and of the Council of 27 January 2003 on the restriction of the use of certain hazardous substances in electrical and electronic equipment.

ATTENTION INTERNATIONAL CUSTOMERS: Products sold in the U.S. are not intended for use in the international market. Humminbird international units provide international features and are designed to meet country and regional regulations. Languages, maps, time zones, units of measurement, and warranty are examples of features that are customized for Humminbird international units purchased through our authorized international distributors.

To obtain a list of authorized international distributors, please visit our Web site at humminbird.com or contact Humminbird Customer Service at (334) 687-8613.

Operations Summary Guide: For an overview of functions, see the Operations Summary Guide [or Quick Start Guide] included with your product.

Accessories: Some of the features shown in this manual require a separate purchase. Radar, AIS, Compass/Heading Sensor, Ethernet, i-Pilot Link, etc. require a separate purchase. For the list of accessories that are compatible with your control head, visit our Web site at humminbird.com. To install each accessory, use the installation guide provided with it, or download the guide from our Web site.

Ethernet Models: Visit our Web site at humminbird.com to purchase Ethernet cables and switches, and to download the Ethernet Networking Installation and Operations Manual.

Register and Update: Visit our Web site at humminbird.com to register your product[s], update control head and accessory software, and purchase additional equipment. Also, see Update Software in this manual for more information.
Using Humminbird Manuals on your Mobile Device or PC

The Humminbird manuals for your control head and accessories can be downloaded to your mobile device or PC. If you prefer to use a hard copy for reference, this manual may be printed.

Download the Manual to your Mobile Device

1. Download the free Adobe Acrobat Reader app to your mobile device.
2. Go to our Web site at humminbird.com, and click Support > Manuals.
3. Select the PDF for your control head model or accessory, and save it to your device.
4. Open the Adobe Acrobat Reader app.
5. Open the Humminbird manual.

Download the Manual to your PC

1. Download the free Adobe Acrobat Reader software from http://get.adobe.com/reader/, and install it on your PC.
2. Go to our Web site at humminbird.com, and click Support > Manuals.
3. Select the PDF for your control head model or accessory, and save it to your device.
4. Open Adobe Acrobat Reader.
5. Open the Humminbird manual.

Jump to a Section: Click a section name in the Bookmarks panel. Bookmarks can be expanded and collapsed by clicking on the plus (+) or minus (-) icons.

Search for Words or Phrases: Press and hold the Ctrl F keys on your PC keyboard. Type the word(s) into the text box.

Print: If you prefer to use a hard copy for reference, this manual may be printed.
The procedures in this section describe how to get started with your control head. Some of the settings in this section are a one-time set up, and other settings [such as checking the GPS reception] you will use each time you hit the water.

**Power On**

Follow the instructions below to power on your Humminbird control head.

1. Press the **POWER** key.
2. When the Title screen is displayed, press the **MENU** key.

3. Select Normal. Press the **RIGHT** Cursor key.
**Normal**

Normal mode is required for on-the-water operation. If a functioning transducer is connected to the control head, Normal will be selected automatically, and your control head can be used on the water.

**Simulator**

To learn how to use your control head, select Simulator. You can save menu settings and navigation data in Simulator mode (see [Chart Overview](#) and [Navigation Overview](#) for more information).

**System Status**

To view system information for software version, GPS reception, and accessory connections, select System Status. See [Check Accessory Connections](#) and [Check GPS Reception](#) for more information.

---

**NOTE:** If you wait too long to select a start-up option, the system will start the mode that is already highlighted. If your control head goes into Demonstration mode, please note that menu settings cannot be saved in this mode (see Manage your Control Head).

---

**Starting Normal Mode for on-the-water Operations**

![Press Right Cursor Arrow to Select](image)

Press the RIGHT Cursor key

---

Getting Started
Quick Setup

If this is the first time the unit has been powered on (after installation or after restoring defaults), the Quick Setup menu will display.

Set up the Control Head

1. Use the Cursor Control key to change the settings.
2. Close: Press the EXIT key.

Quick Setup Menu

<table>
<thead>
<tr>
<th>Language</th>
<th>The available languages are determined by your Humminbird model.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><strong>WARNING!</strong> Do NOT enable Asian Mode if you do not require Asian languages. Before you select Asian Mode, contact Customer Service for important information.</td>
</tr>
<tr>
<td>Max Depth</td>
<td>Set the maximum depth of the body of water. When Max Depth is set to Auto, the control head will acquire bottom readings as needed (within the capabilities of the unit). When Max Depth is set to match your water maximum depth, the control head will not attempt to acquire sonar data below that depth, so more detail will be shown on the display. Side Imaging units default to the Side Imaging range setting if the SI Range is set deeper than the Max Depth. See the Side Imaging section for more information.</td>
</tr>
<tr>
<td>Water Type</td>
<td>Water Type affects the accuracy of deep water depth readings and configures the control head for operation in fresh or salt water. In salt water, you can also choose the shallow or deep setting. If the depth is more than 330 ft (100 m), select Salt (deep).</td>
</tr>
<tr>
<td>Connected Transducer</td>
<td>The control head will automatically select the transducer that was included with your control head. If your model is compatible with an accessory transducer, and it is connected to the control head, select the transducer in the system so the beams are activated and the related views are added to the control head.</td>
</tr>
</tbody>
</table>

NOTE: To change the Max Depth, Water Type, and the Connected Transducer after the initial Setup, see Set up Sonar.
**Check Accessory Connections**

If you’ve connected other separate-purchase equipment to the control head, such as AIS, Compass/Heading Sensor, and more, use these instructions to confirm the equipment is detected and communicating with the control head. You can also check Ethernet accessory connections from this view.

1. Press and hold the VIEW key.
2. Select System > Accessory Test.

**Confirm all accessories are listed as Connected.** If you have a temp/speed wheel, the wheel must move for it to be detected.

**Unconnected:** If an accessory is listed as Unconnected, check the cable and power connections to confirm they are secure and powered on. Review the installation guide that was included with your accessory to confirm it is installed correctly.

</tbody>
</table>

**NOTE:** The menus for installed accessories are typically included in the Accessory tab in the Main Menu. See your accessory guide for details. For the latest list of accessories that are compatible with your control head, visit our Web site at humminbird.com.
Check GPS Reception

If your control head includes internal GPS, or if it is connected to an External GPS receiver, use the instructions in this section to confirm the control head has GPS reception.

1. Press and hold the VIEW key.
2. Select System > GPS Diagnostic View.

- **Confirm GPS Fix Type** is shown as Enhanced or 3D.
- **Confirm that the latitude/longitude position** readout is displayed.

### GPS Diagnostic View

- **HDOP**
- **Est Pos Error**
- **Average CNO**
- **Top 4**
- **Speed**
- **COG**
- **SD Card**
- **Chart Card**

**GPS Reception**: The sky chart displays the satellite number and signal strength bar.

**GPS Fix Type**: reported as No Fix, 2D Fix, 3D Fix, or Enhanced. An Enhanced Fix has been augmented using information from WAAS, EGNOS, or MSAS.

**HDOP (the Horizontal Dilution of Precision)**: a GPS system parameter which depends on the current satellite configuration. HDOP is used to calculate the Estimated Position Error.

**NOTE**: To manually change your GPS source, change the output frequency, or turn on GLONASS, see *Manage your Control Head.*
Set Alarms

When an alarm is turned on, an alert will sound or display on the control head to indicate the threshold has been exceeded.

**Turn on Alarms and Adjust Settings**

1. **Main Menu:** Press the MENU key twice.
   OR
   To open the Main Menu from a System View, press the MENU key once.
2. Select the Alarms tab.
3. Select an alarm menu. Press the RIGHT or LEFT Cursor keys to adjust the threshold.

<table>
<thead>
<tr>
<th>Alarm Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Depth Alarm</td>
<td>The alarm will be triggered when the depth becomes equal to or less than the menu setting. Transducer required.</td>
</tr>
<tr>
<td>Fish ID Alarm</td>
<td>The alarm will be triggered when a fish is detected based on the menu setting. See <em>Adjust Sonar Display Settings</em> for more information.</td>
</tr>
<tr>
<td>Low Battery Alarm</td>
<td>The alarm will be triggered when the input battery voltage is equal to or less than the menu setting. The battery must be connected to the control head. Set the alarm to a level that will alert you when the battery is low but at a level that is high enough to start the engine and run essential electronics. See your control head installation guide for more information.</td>
</tr>
<tr>
<td>Temp. Alarm</td>
<td>The alarm will be triggered when the water temperature detected by the control head is equal to the temp alarm setting. Input from the built-in transducer temperature sensor or a temperature accessory is required.</td>
</tr>
<tr>
<td>Off Course Alarm</td>
<td>Sets how far the boat can move off course during navigation before an alarm will be triggered. GPS required. See <em>Navigation Overview</em> for more information.</td>
</tr>
<tr>
<td>Arrival Alarm</td>
<td>Sets how close the boat must be to the destination waypoint before the alarm will be triggered. GPS required. See <em>Navigation Overview</em> for more information.</td>
</tr>
<tr>
<td>Drift Alarm</td>
<td>Sets how far the boat can move from its anchored position outside the drift alarm perimeter before an alarm will be triggered. GPS required. See <em>Navigation Overview</em> for more information.</td>
</tr>
</tbody>
</table>

**NOTE:** The available alarms are determined by the connected equipment, so your control head may provide more or less options than the information shown here. If there are accessories installed, review the accessory guide for alarm information.

4. **Close:** Press the EXIT key twice.

**Exit an Alarm**

If an alarm is triggered during control head operation, you can close it or silence it using these instructions.

1. Press any key on the control head.
**Change Units of Measurement**

Use the instructions in this section to change the units of measurement format. You can also change the time and date format, language, and installation offsets from this menu. See *Manage your Control Head* for more information.

1. **Main Menu:** Press the MENU key twice.
2. Select the Setup tab.
3. Select Units - Depth, Units - Distance, etc., and select each unit setting as needed.
4. **Close:** Press the EXIT key.

**Reset the Triplog**

The Triplog includes the timer for elapsed time, distance traveled since last reset, and average speed. Use the following instructions to reset the triplog. To display the Triplog as a digital readout, see *Views: Display Digital Readouts*.

1. **Main Menu:** Press the MENU key twice.
2. Select the Setup tab.
3. Select Triplog Reset.
4. Press the RIGHT Cursor key.
5. Follow the on-screen prompts.

**Turn on/off Sounds**

Use the instructions in this section to choose the category of sounds you want to hear from your control head.

1. **Main Menu:** Press the MENU key twice.
2. Select the Setup tab.
3. Select Sound Control.
4. Select All Sounds or Alarms Only.
   - **To receive a sound alert from an alarm,** Sound Control must be set to All Sounds or Alarms Only.
   - **Change the Alarm Tone:** Select the Alarms tab > Alarm Tone.

**Change the User Mode**

The User Mode determines how many menu options are displayed in the menu system. Select **Normal** to see fewer menu options that are used more often. Select **Advanced** to see all the menu options available in the menu system.

Instructions in this manual marked with **Main Menu [Advanced User Mode]** indicate that the menu system User Mode must be set to Advanced for the selected menu to be shown. If you do not see the menu in the system, change the User Mode to Advanced. See *Menu System Overview* for details.

1. **Main Menu:** Press the MENU key twice.
2. Select the Setup tab.
3. Select User Mode.
4. Select Normal or Advanced.

**Set up Sonar**

If you’ve installed an accessory transducer, or to refine your sonar settings or turn on/off Ice Fishing Mode, see *Set up Sonar* for details.
Set up Chart Preferences

If you’ve installed a microSD or SD map card, see Chart Overview to set up the map source.

Pair a Phone with the Control Head (HELIX G2N/G3N Series only)

If you have a HELIX G2N or G3N Series control head, you can pair a phone with it using Bluetooth wireless technology.

Pair a Phone with the Control Head

1. **Main Menu:** On the HELIX control head, press the MENU key twice.
2. **Open the Phone Bluetooth Menu:** Select the Accessories tab.
   
   Select Phone Bluetooth. Press the RIGHT Cursor key.
3. Select Bluetooth.
4. Select On.
5. Select Connect New Phone. Press the RIGHT Cursor key.
   
   It will take a moment for this option to appear in the menu.
6. Follow the on-screen prompts to start the pairing process.
   
   If the phone is not found, select Search for Phone. Press the RIGHT Cursor key.
7. When the phone name displays in the menu, select it. Press the RIGHT Cursor key.
8. Check your phone. When prompted, tap Pair on your phone.
9. In your phone Settings menu, turn on Show Notifications.

Change the Phone Bluetooth Alert Format

Use the following instructions to select an alert format on the control head or turn off alerts.

1. On the HELIX control head, open the Phone Bluetooth menu.
   
   **NOTE:** In your phone Settings menu, confirm that Bluetooth is turned on and Show Notifications is turned on.
2. Select Text Message Alerts or Phone Call Alerts.
   
   Press the RIGHT or LEFT Cursor keys to select an alert format. To turn off notifications, select off.
3. Select Sounds. Select On or Off.

Review Phone Bluetooth Notifications

Use the Views X-Press Menu to review notifications.

1. Press and hold the VIEW key.

### Reviewing Phone Bluetooth Information

![Phone Bluetooth Information](image)
**Adjust the Backlight**

1. Press the POWER key.
2. Select Light.
3. Adjust the Backlight setting from Dim to 10 (brightest).

**Start Standby Mode**

To conserve power while the control head is not in-use, start Standby mode.

1. Press the POWER key.
2. Select Standby.
3. Press the RIGHT Cursor key.
4. **Turn off:** Press the POWER key.

**Power Off**

Use the following instructions to power off your control head. Your control head should always be turned off using the POWER key.

*If you are currently navigating,* you should save the current track before powering off.

**Save the Current Track**

1. **Chart X-Press Menu:** With a Chart View displayed on-screen, press the MENU key once.
2. Select Save Current Track.
3. Press the RIGHT Cursor key.

**Power Off**

1. Press and hold the POWER key.
HELIX 7 G2/G2N and G3/G3N Series Models (with Internal GPS)

HELIX 8, 9, 10, 12 G2N/G3N Series

The Control Head
**Control Head Keys**

The available keys are determined by your control head model. Your control head might not include all the keys shown in this section.

**ZOOM IN (+)/ZOOM OUT (–) KEYS**

Press the ZOOM keys to change the scale of the view. For a closer view, press the ZOOM IN (+) key. For a wider view, press the ZOOM OUT (–) key. You can also magnify the cursor selection. You can also press these keys to adjust the sensitivity in sonar views (Sonar, DI, SI).

**VIEW KEY**

Press and hold the VIEW key to open the Views X-Press menu, or press the VIEW key repeatedly until the view you want to use is displayed on the screen. Press the EXIT key to display the previous view. See Views for details.

**CHECK/INFO KEY**

In the Chart View, press the CHECK/INFO key to see information about the cursor position or about objects located near the cursor position. If the cursor is not active, the Chart Info submenu will open. See Navigation Overview for details.

In Sonar Views, press this key once to switch frequencies (if available). See each sonar section (Sonar, DI, SI) for details.

**MARK KEY**

Press the MARK key to save a waypoint at the boat position. If the cursor is active, press the MARK key twice to save a waypoint at the cursor position. See Navigation Overview for details.

If a microSD or SD card is installed, press and hold this key to save a Screen Snapshot. See Manage Screen Snapshots and Recordings for details.

**MENU KEY**

To open the X-Press Menu for the on-screen view and operation mode, press the MENU key once. To open the Main Menu, press the MENU key twice. See Menu System Overview for details.

**GO TO/MAN OVERBOARD (MOB) KEY**

With an active cursor, press the GOTO key twice to create a waypoint and start navigation towards that waypoint. If the cursor is not active, press the GOTO key, and choose from the saved navigation data.

To start Man Overboard navigation, press and hold the GOTO key. See Navigation Overview and Man Overboard (MOB) Navigation for details.

**EXIT KEY**

Press the EXIT key to close a menu, close a dialog box, turn off an alarm, or exit Cursor mode.

Also, press the EXIT key to scroll through the View Rotation in reverse order. See Views for details.

**VIEW SHORTCUT KEY**

Press and hold a VIEW SHORTCUT key to save a shortcut to the on-screen view. You can save one view on each VIEW SHORTCUT key. See Views for details.

**POWER KEY**

Press the POWER key to power on the control head. To power off, press and hold the POWER key.

During operation, press the POWER key. The backlight can be adjusted from this menu. You can also turn on/off Sonar, change the view background color, and start Standby mode.
SD Card or microSD Card Slot

Your control head may be compatible with an SD or microSD card (separate purchase required). Use it to update software, add detailed charts to your control head, import/export navigation data, and save sonar recordings and screen snapshots. Use the instructions in this section to install the card.

Add Maps: see Chart Overview.

Import/Export Navigation data: See Manage your Navigation Data.

Sonar Recordings and Screen Snapshots: See Manage Screen Snapshots and Recordings.

Software Updates: For details, see Update Software.

⚠️ CAUTION! Before the control head software is updated or restored to system defaults, export your navigation data (see Update Software).

Insert an SD Card

Follow these steps if your control head is compatible with SD cards.

1. Remove the SD card slot cover.
2. Position the SD card so that the label faces to the left.
3. Insert the card into the slot until it clicks into place.
4. Replace the slot cover so it is secure.
5. Remove: Press the card into the slot and then release it. The card will eject. Pull the card carefully from the slot.

NOTE: Do not leave the SD card slot cover open. The slot cover should always be closed to prevent water damage to the unit.

Insert a microSD Card

Follow these steps if your control head is compatible with microSD cards.

1. Remove the microSD card slot cover.
2. Side Card Slot: Position the microSD card so that the label faces the front of the control head and the card notches face down.
   
   Front Card Slot: Position the microSD card so that the label faces to the left and the card notches face up.
3. Insert the card into the slot until it clicks into place.
4. Replace the slot cover so it is secure.
5. To Remove: Press the card into the slot and then release it. The card will eject. Pull the card carefully from the slot.

NOTE: Do not leave the card slot cover open. The slot cover should always be closed to prevent water damage to the unit.
Removing the microSD Card Slot Cover (HELIX 5, HELIX 7)

Installing a microSD Card (magnified view) (HELIX 5, HELIX 7)

**Menu System Overview**

The menu system provides menu options that are determined by the operations mode, on-screen view, and connected accessories.

---

**Open an X-Press Menu**

The X-Press Menu displays menus that are related to the on-screen view and the operations mode (such as navigation). In this illustration, the Sonar X-Press Menu is displayed because the Sonar View is displayed on the screen.

**Open the X-Press Menu**

1. Press the VIEW key repeatedly until the view you want is displayed on-screen.
2. Press the MENU key once.

---

**Open the Main Menu**

The main menu is divided into tabbed categories [Alarms, Sonar, Navigation, Chart, Humminbird Chart, Setup, Views, and Accessories]. The available tabs and menus are determined by your model and the connected accessories.

**Open the Main Menu**

1. Press the MENU key twice.
**Select a Menu**

Use the Cursor Control key to select a menu in the Main Menu or X-Press Menu.

**Select a Tab (Main Menu)**

1. Press the RIGHT or LEFT Cursor keys.

**Select a Menu**

1. Press the DOWN or UP Cursor keys.

**Change a Menu Setting**

Use the Cursor Control key to change menu settings or start an action. When you change a menu setting, the view will update immediately.

**Adjust a Menu Setting**

1. Press the RIGHT or LEFT Cursor keys.
Start an Action/Open a Submenu

1. If a menu has a right arrow on it, press the RIGHT Cursor key to start the action or open the submenu.

Tips for Using the Menu System

You can move through the menu system quickly using the following tips.
Change the User Mode (Normal or Advanced)

The User Mode determines how many menus are shown in the menu system. Select Normal to see fewer menus that are used more often. Select Advanced to see all the menus available in the menu system.

Main Menu [Advanced User Mode]: Instructions in this manual marked with Main Menu [Advanced User Mode] indicate that the menu system User Mode must be set to Advanced for the selected menu to be shown. If you do not see the menu in the system, change the User Mode to Advanced.

Change the User Mode

1. Main Menu: Press the MENU key twice.
2. Select the Setup tab.
3. Select User Mode.
4. Select Normal or Advanced.

Close the Menu System

Use the EXIT key to go back through the menu system or close the menu system.

Back: Press the EXIT key to close the current menu and go back one level in the menu system.
Close: Press the EXIT key repeatedly until the menu system is closed.
The HELIX control head has many options to display data on-screen, and the data can be displayed in a variety of ways. There are also several ways to quickly display a view on-screen. To see the list of views available on your control head, see Show your Favorite Views.

Display a View

The available views are determined by the control head model, installed transducer, and connected accessories.

Display a View from the Views X-Press Menu

1. Press and hold the VIEW key.
2. Select a view category. Press the RIGHT Cursor key.
3. Select a view. Press the RIGHT Cursor key.

Selecting a View to Display on the Screen

Press and Hold to Open the Views X-Press Menu

Forward: Press to go to the Next View

Back: Press to go to the Previous View

Press to Display a Saved View
Display the Next/Previous View

Next View: Press the VIEW key repeatedly until the view you want is displayed on-screen.

Previous View: Press the EXIT key repeatedly until the view you want is displayed on-screen.

Display a Saved View

1. Press a VIEW SHORTCUT key.

You can save one view on each VIEW SHORTCUT key. See Save a View to a VIEW SHORTCUT key for more information.

Show your Favorite Views

You can display or hide any view so that each time you press the VIEW key, only your favorite views are displayed on the screen. You can also use the Views tab to see the list of views available on your control head. The available views are determined by your control head model, installed transducer, and connected accessories.

Show/Hide a View

1. Main Menu: Press the MENU key twice.
2. Select the Views tab.
3. Select a view.
4. Select Hidden or Visible.

Hide Sonar Views

If you’re using your control head for GPS/Navigation functions only, use these instructions to hide all sonar views from the view rotation. This setting also deactivates sonar.

1. Press the POWER key.
2. Select Sonar.

NOTE: You can also turn on/off Sonar from the Main Menu > Setup tab > Sonar.

Save a View to a VIEW SHORTCUT key (HELIX 8, 9, 10, 12 only)

Another way to display your favorite views quickly is to save them on the VIEW SHORTCUT keys. You can program the VIEW SHORTCUT keys to display a saved view immediately. You can save one view on each key.

With the view you want to save displayed on-screen, press and hold one of the VIEW SHORTCUT keys for several seconds.
Digital Readout data can be displayed as an overlay, or it can be displayed in data boxes on the views. You can also choose which digital readouts you want to display. The format and readouts you choose will be applied to all views.

**Accessories:** The available digital readouts are determined by the installed equipment, so if you connect accessories, additional readouts will be available.

**Format:** You can change the digital readout format from the Setup Tab. See *Manage your Control Head: Change Digital Readout Formats* for details.

## Select the Digital Readout Type

Use the instructions in this section to display digital readouts in boxes or as overlays. You can also choose to hide the digital readouts completely.

1. **Main Menu:** Press the MENU key twice. Select the **Setup** tab.
2. Select Digital Readouts.
3. Select one of the following options:

<table>
<thead>
<tr>
<th>Boxes</th>
<th>Digital Readouts are displayed in boxes on the view. See the illustration Digital Readouts with Boxes Selected. You can customize which digital readouts are displayed [see Customize Digital Readouts].</th>
</tr>
</thead>
<tbody>
<tr>
<td>Overlay</td>
<td>The digital readouts are displayed as an overlay on the view. See the illustrations Digital Readouts with Overlay Selected. These digital readouts are fixed and cannot be changed.</td>
</tr>
<tr>
<td>Off</td>
<td>The digital readouts will be hidden completely. To hide individual digital readouts instead of all, see Customize Digital Readouts.</td>
</tr>
</tbody>
</table>

## Show/Hide Digital Readouts on the Side Imaging View (Side Imaging models only)

If you have Digital Readouts set to Boxes on all views, you can hide the digital readout boxes on the Side Imaging View exclusively.

1. **Main Menu:** Press the MENU key twice. Select the **Sonar** tab.
2. Select SI Readouts.
3. Select On [show] or Off [hide].
Customize Digital Readouts

If you have Digital Readouts set to Boxes, you can select the data that will be displayed in each box. Use the **Select Readouts** menu to set your standard digital readouts. Use the **Select Nav Readouts** menu to set the digital readouts that will be displayed during navigation.

1. **Main Menu [Advanced User Mode]**: Press the MENU key twice. Select the **Setup** tab.
2. Select Select Readouts or Select Nav Readouts. Press the RIGHT Cursor key.
3. Select a readout window [Readout 1, 2, 3, etc.].
4. Select a digital readout.

*Hide*: To hide a readout window, select **Off**.
Understand Digital Readouts

The following table displays the digital readouts that are available in the Select Readouts menu or the Select Nav Readouts menu. The available digital readouts are determined by the installed equipment.

<table>
<thead>
<tr>
<th>Label</th>
<th>Name</th>
<th>Description</th>
<th>Navigation Readout</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bearing</td>
<td>Bearing</td>
<td>The direction to a destination waypoint measured in degrees from north.</td>
<td>✓</td>
</tr>
<tr>
<td>COG</td>
<td>Course Over Ground (Course)</td>
<td>The direction the boat is traveling measured in degrees from North. When the COG is equal to Bearing, the boat is said to be on course and will arrive at the destination in the most efficient manner.</td>
<td>✓</td>
</tr>
<tr>
<td>Depth</td>
<td>Depth</td>
<td>The depth of the water from the transducer or digital depth sensor to the bottom. This measurement includes the depth offset setting. If the depth number is flashing, it means the unit is having trouble locating the bottom. This usually happens if the water is too deep, the transducer is out of the water, the boat is moving too fast, etc.</td>
<td></td>
</tr>
<tr>
<td>DTG</td>
<td>Distance to Go (Distance)</td>
<td>The distance between the boat position and the next waypoint on the route.</td>
<td>✓</td>
</tr>
<tr>
<td>ETA</td>
<td>Estimated Time of Arrival</td>
<td>The estimated time of arrival to the next waypoint on the route.</td>
<td>✓</td>
</tr>

<td>Timer</td>
<td>The digital readout for the timer set in the Alarms tab (see Manage your Control Head: Start the Timer).</td>
<td></td>
</tr>
<tr>
<td>Triplog</td>
<td>Triplog</td>
<td>The elapsed time since the triplog was last reset, the distance traveled since last reset, and the average speed during timed interval. To reset the triplog, see Getting Started: Reset the Triplog.</td>
<td>✓</td>
</tr>
<tr>
<td>TTG</td>
<td>Time to Go</td>
<td>The estimated time required to reach the next waypoint on the route. TTG is calculated using the SOG (Speed Over Ground) and DTG (Distance to Go).</td>
<td>✓</td>
</tr>
<tr>
<td>VLT</td>
<td>Voltage</td>
<td>Power supplied to the control head.</td>
<td></td>
</tr>
<tr>
<td>XTE</td>
<td>Cross Track Error</td>
<td>The straight-line distance of the boat from the intended route. XTE measures how far the boat is off course.</td>
<td>✓</td>
</tr>
</tbody>
</table>
**Combo Views**

Combo views display two views (or more) on the screen at the same time. To change the settings, select menus or actions, or change the size of either view, you must select the view as the Active Pane from the X-Press menu. The available combo views are determined by your Humminbird model.

**Select an Active Pane**

To change the settings in a combo, or to use the cursor on a view, the individual view must be selected as the active pane.

1. **X-Press Menu:** With a Combo View displayed on-screen, press the MENU key once.
2. Select Active Pane.
3. Select a pane.

   **X-Press Menu:** The X-Press Menu updates with the menus available for the active pane of the view.

   **Cursor:** Press any arrow on the Cursor Control key to use the cursor on the active pane of the view.

**Adjust the View Pane Size**

Split Position allows you to adjust the size of the selected pane in a Combo View.

1. **X-Press Menu:** With a Combo View displayed on-screen, press the MENU key once.
2. Select Split Position.
3. Press the RIGHT or LEFT Cursor keys to adjust the pane size.
Set up Sonar

The available sonar views and menus on the control head are determined by the connected transducer and the selected transducer source.

Most of the settings in this section were set up when you first powered on the unit using the Quick Setup Menu. Use the instructions in this section to adjust those settings, set up an accessory transducer, or refine the information shown on-screen.

Set up an Accessory Transducer (Optional)

The control head will automatically select the transducer that was included with your control head. If your model is compatible with an accessory transducer, and it is connected to the control head, select the transducer in the system so the beams are activated and the related views are added to the control head. See Getting Started: Quick Setup for more information.

NOTE: To see the latest transducers that are compatible with your control head, visit our Web site at humminbird.com.

1. Main Menu: Press the MENU key twice. Select the Sonar tab.
2. Select Connected Transducer.
3. Select the transducer connected to the unit.
   To adjust the depth offset, see Manage your Control Head.

Adjust the Noise Filter (Optional)

If interference appears on the sonar views from sources such as your boat engine, turbulence, or other sonar devices, use Noise Filter to limit the interference.

1. Main Menu [Advanced User Mode]: Press the MENU key twice. Select the Sonar tab.
2. Select Noise Filter.
3. Select a filter setting, where Low is the lightest filter and High 3 filters the most interference.
   Off: removes all filtering.
   High: The high settings are useful when there is excessive trolling motor noise. However, in some deep water situations, the High settings may hinder the control head’s ability to find the bottom.

Change the Max Depth (Optional)

The Max Depth was set when you first configured the unit with the Quick Setup dialog box (see Getting Started: Quick Setup). Use the instructions in this section to adjust the maximum depth setting.

1. Main Menu [Advanced User Mode]: Press the MENU key twice. Select the Sonar tab.
2. Select Max Depth.
3. Select one of the following:
   Auto: the control head will acquire bottom readings as needed [within the capabilities of the unit].
   Set to match the body of water depth: the control head will not attempt to acquire sonar data below that depth, so more detail will be shown on the display.

NOTE: Side Imaging units default to the Side Imaging range setting if the SI Range is set deeper than the Max Depth. See the Side Imaging section for more information.
Select the Digital Depth Source

Depending on the depth, the control head will automatically choose the 2D conical beams or the Down Imaging beams to display the depth digital readout. If the depth is deeper than 350 ft, or if you connect an ice transducer to the control head, set the Digital Depth Source to 2D Element.

NOTE: Selecting the Digital Depth Source is available on the following models: DI, CHIRP DI, CHIRP MEGA DI, CHIRP MEGA DI+, CHIRP MEGA SI, and CHIRP MEGA SI+.

1. Main Menu [Advanced User Mode]: Press the MENU key twice. Select the Sonar tab.
2. Select Digital Depth Source.
3. Select Auto or 2D Element.
   - Auto: The control head will acquire the digital depth as needed.
   - 2D Element: Select 2D Element if the depth is deeper than 350 feet. Down Imaging is not available with this setting.

Turn on Max DI (CHIRP MEGA SI models only)

Max DI [On] is typically used for deep water to provide the maximum strength for the Down Imaging signal. Max DI [Off] typically provides the best resolution in shallow water.

1. Main Menu [Advanced User Mode]: Press the MENU key twice. Select the Sonar tab.
2. Select Max DI.
3. Select On or Off.

Change DI Frequency Presets (CHIRP MEGA DI+ and CHIRP MEGA SI+ models only)

Increased Range is typically used for deep water to provide the maximum strength for the Down Imaging signal. Increased Detail typically provides the best resolution in shallow water.

1. Main Menu [Advanced User Mode]: Press the MENU key twice. Select the Sonar tab.
2. Select DI Frequency.
3. Select Increased Detail (default) or Increased Range.

Change the Water Type

The Water Type was set when you first configured the unit with the Quick Setup dialog box [see Getting Started: Quick Setup]. Water Type affects the accuracy of deep water depth readings and configures the control head for operation in fresh or salt water. Use the instructions in this section to change the Water Type setting.

1. Main Menu [Advanced User Mode]: Press the MENU key twice. Select the Sonar tab.
2. Select Water Type.
3. Select one of the following for your water type and depth conditions:
   - Fresh
   - Salt (shallow)
   - Salt (deep): If the depth is more than 330 ft (100 m), select Salt (deep).
**Change the Side Imaging Orientation (CHIRP MEGA SI, CHIRP MEGA SI+ models only)**

Use SI Orientation to switch how the Side Imaging beams are displayed in the Side Imaging View. This menu option can be used if the port and starboard beams are reversed during installation, which might be the case if a transducer is installed incorrectly. For further assistance, contact Humminbird Customer Service.

1. **Main Menu (Advanced User Mode):** Press the MENU key twice. Select the Sonar tab.
2. Select SI Orientation
3. Select Normal or Reverse.

**Set up Ice Fishing (ICE HELIX CHIRP and HELIX 5 and 7 G2/G2N models only)**

If you have a compatible CHIRP model and want to use it for ice fishing, Ice Fishing mode must be turned on. See Display the Circular Flasher View On-Screen for more information.

**Turn off Sonar**

If you’re using your control head for GPS/Navigation functions only, use these instructions to hide all sonar views from the view rotation. When it is set to Off, this setting also stops the unit from pinging, so all sonar operation is deactivated.

1. Press the POWER key.
2. Select Sonar.

**NOTE:** You can also turn on/off Sonar from the Main Menu > Setup tab > Sonar.

**Turn on/off CHIRP (optional, CHIRP models only)**

To use CHIRP sonar, CHIRP mode must be turned on. The menu options are determined by the installed transducer and control head model.

**NOTE:** Humminbird has provided the best settings for your unit. You can use the settings included with your control head, or you can adjust these advanced options.

**Turn on/off 2D CHIRP**

1. **Main Menu (Advanced User Mode):** Press the MENU key twice. Select the Setup tab.
2. Select CHIRP Configuration. Press the RIGHT Cursor key.
   - If the menu is not shown in the Setup tab, select the Sonar tab.
3. Select 2D CHIRP Mode.
4. Select On or Off. (Default = On)

**Turn on/off Down Imaging CHIRP**

1. **Main Menu (Advanced User Mode):** Press the MENU key twice. Select the Setup tab.
2. Select CHIRP Configuration.
3. Select DI CHIRP Mode or Imaging CHIRP Mode. Press the RIGHT Cursor key.
4. Select On or Off. (Default = On)
**Turn on/off Side Imaging CHIRP**
1. **Main Menu [Advanced User Mode]**: Press the MENU key twice. Select the **Setup** tab.
2. Select CHIRP Configuration. Press the RIGHT Cursor key.
3. Select SI CHIRP Mode or Imaging CHIRP Mode.
4. Select On or Off. (Default = On)

**Select Frequencies for the 2D Sonar View (optional)**

Use the instructions in this section to select the frequencies that will be used for the 2D Sonar views. The menu options are determined by the installed transducer and control head model.

**NOTE:** You can also change the frequency in the 2D Sonar View while you fish by pressing the CHECK key [see the 2D Sonar View section: Adjust Settings While you Fish].

**Display Frequency for the 2D Sonar View (HELIX 7 CHIRP GPS G2)**

**Select Frequencies for the (2D) Sonar View**
1. **Main Menu**: Press the MENU key twice. Select the **Sonar** tab.
2. Select 2D Display Frequency.
   - **Dual Beam CHIRP Models**: Select 2D CHIRP Display Frequency.
   - **Dual Spectrum CHIRP Models**: Select Display Spectrum.
3. Select a frequency.
   For details, see the tables in **Understand Transducer Frequencies** and refer to your transducer model.
Select a Frequency for the Down Imaging View (optional)

Use the instructions in this section to choose a frequency that will be used for the Down Imaging View. The menu options are determined by the installed transducer and control head model.

**NOTE:** You can also change the frequency in the Down Imaging View while you fish by pressing the CHECK key (see the Down Imaging section: Adjust Settings While you Fish).

---

Select a Frequency for the Down Imaging View

1. **Main Menu:** Press the MENU key twice. Select the Sonar tab.

2. **DI Models:** Select Imaging Display Frequency.
   - CHIRP DI, CHIRP MEGA, CHIRP MEGA+ Models: Select DI CHIRP Display Frequency.

3. Select a frequency.

   For details, see the tables in *Understand Transducer Frequencies* and refer to your transducer model.
**Set the Down Imaging Beam Width (optional, XNT 9 SI 180 T only)**

If the XNT 9 SI 180 T (Compact Side Imaging transducer) is installed, you can set the width of the beam (side to side) used for the Down Imaging View. To see only the data directly under your boat, select Narrow. Medium reveals more information, while Wide displays the maximum information available from the Down Imaging beam width. See *Understand the Down Imaging View* for more information.

1. **Main Menu (Advanced User Mode):** Press the MENU key twice. Select the Sonar tab.
2. Select Down Imaging Beam Width.
3. Press the RIGHT or LEFT Cursor keys to select a width.

**Select a Frequency for the Side Imaging View (optional, CHIRP MEGA SI, CHIRP MEGA SI+ models only)**

Use the instructions in this section to choose a frequency that will be used for the Side Imaging View.

**NOTE:** You can also change the frequency in the Side Imaging View while you fish by pressing the CHECK key (see the *Side Imaging* section: *Adjust Settings While you Fish*).

**Display Frequency for the Side Imaging View [CHIRP MEGA SI]**

[HELIX 9 CHIRP SI GPS G2N]

**Select a Frequency for the Side Imaging View**

1. **Main Menu:** Press the MENU key twice. Select the Sonar tab.
2. Select SI CHIRP Display Frequency.
3. Select a frequency.

For details, see the tables in *Understand Transducer Frequencies* and refer to your transducer model.

Adjust the CHIRP Frequency Spectrum (optional, CHIRP models only)

Your control head has been configured with the best settings for a wide range of fishing conditions, and we recommend using the entire CHIRP frequency spectrum included with your unit. However, you can adjust the CHIRP Frequency Spectrum to limit the interferences on the display or refine the settings to your preference. The menu options are determined by the installed transducer and control head model.

Requirements: CHIRP mode must be turned on. The menus are also determined by the display frequency you have selected for each view.

⚠️ WARNING! If an accessory transducer is installed, confirm it is configured in the control head. See Set up an Accessory Transducer for details. For information about accessory transducers, visit our Web site at humminbird.com.

Adjust the 2D CHIRP Frequency Spectrum

1. Main Menu [Advanced User Mode]: Press the MENU key twice. Select the Setup tab.
2. Select CHIRP Configuration. Press the RIGHT Cursor key.
   If the menu is not shown in the Setup tab, select the Sonar tab.
4. Select a frequency menu.
5. Press the RIGHT or LEFT Cursor keys to select a setting.
6. Repeat: Repeat steps 4 and 5 to adjust the Start Frequency and End Frequency for each beam.
7. Close: Press the EXIT key.

Adjust the Down Imaging CHIRP Frequency Spectrum

1. Main Menu [Advanced User Mode]: Press the MENU key twice. Select the Setup tab.
2. Select CHIRP Configuration. Press the RIGHT Cursor key.
   If the menu is not shown in the Setup tab, select the Sonar tab.
3. Select DI CHIRP Frequency Spectrum or Imaging CHIRP Frequency Spectrum. Press the RIGHT Cursor key.
4. Select a frequency menu.
5. Press the RIGHT or LEFT Cursor keys to select a setting.
6. Repeat: Repeat steps 4 and 5 to adjust the Start Frequency and End Frequency for each beam.
7. Close the Submenu: Press the EXIT key.

Adjust the Side Imaging CHIRP Frequency Spectrum

1. Main Menu [Advanced User Mode]: Press the MENU key twice. Select the Setup tab.
2. Select CHIRP Configuration. Press the RIGHT Cursor key.
   If the menu is not shown in the Setup tab, select the Sonar tab.
4. Select a frequency menu.
5. Press the RIGHT or LEFT Cursor keys to select a setting.
6. Repeat: Repeat steps 4 and 5 to adjust the Start Frequency and End Frequency for each beam.
7. Close the Submenu: Press the EXIT key.
**Reset CHIRP Configuration Settings**

Use the following instructions to reset the CHIRP menu settings to the factory defaults.

1. **Main Menu [Advanced User Mode]**: Press the MENU key twice. Select the **Setup** tab.
2. Select CHIRP Configuration. Press the RIGHT Cursor key.
3. Select Local CHIRP Configuration Reset. Press the RIGHT Cursor key.
**DISPLAY A SONAR VIEW ON-SCREEN**

There are a variety of views available to display sonar data. You can customize the view by showing or hiding information [see *Customize the Sonar View*], and you can adjust the sonar settings to refine the information displayed on-screen [see *Adjust Sonar Display Settings* and *Adjust Settings While you Fish*]. The changes you make are applied to all traditional 2D sonar views.

### Display a Sonar View

1. Press and hold the VIEW key.

2. Select Sonar > Sonar View, Sonar Zoom View, Split Sonar View, etc.

### Sonar View

![Sonar View](image)

For more information, see *Review Sonar History and Zoom In/Zoom Out.*

### Sonar Zoom View

![Sonar Zoom View](image)

For more information, see *Compare Sonar Beams.*

### Split Sonar View

![Split Sonar View](image)

### Big Digits View

![Big Digits View](image)

### Circular Flasher View (ICE HELIX CHIRP)

![Circular Flasher View](image)

For more information, see *Display the Circular Flasher View On-Screen.*

**NOTE:** The available views are determined by your control head model and the installed transducer. For a complete list of the views available on your control head, press the MENU key twice, and select the Views tab. See each related section of the manual (*Views, Down Imaging, Side Imaging, Navigation Overview*, etc.) for more information.
Display a Sonar Combo View

1. Press and hold the VIEW key.
2. To open a Sonar Combo View, select Sonar.
   To open a Chart Combo View (Sonar and Chart together), select Chart.
3. Select a view to display on-screen.

**NOTE:** The available views are determined by your control head model and the installed transducer. For a complete list of the views available on your control head, press the MENU key twice, and select the Views tab. See each related section of the manual [Views, Down Imaging, Side Imaging, Navigation Overview, etc.] for more information.
UNDERSTAND THE SONAR VIEWS

As the boat moves, the unit charts the changes in depth on the display to create a profile of the bottom contour. The Sonar View displays the sonar return intensity with different colors.

Strong returns often result from rocky or hard bottoms (compacted sediment, rocks, fallen trees), while weaker returns often result from soft bottoms (sand, mud), vegetation, and small fish.

The colors used to represent high, medium, to low intensity returns are determined by the palette you choose in the Sonar Colors menu [see Customize the Sonar View].

The control head displays the return intensity based on the Sonar Colors and Bottom View menu settings. You can display the RTS Window (Real Time Sonar), turn on/off fish symbols (Fish ID+), change the SwitchFire mode, adjust sensitivity, and more.

Sonar History – Historical returns scroll left across the view.
You can customize the sonar views by showing or hiding information, such as the temperature graph, depth lines, color bar, and RTS Window. You can also change the color palette.
Show/Hide the Frequency Label

The Frequency Label displays the currently selected frequencies. See *Set up Sonar*.

1. **Main Menu:** Press the MENU key twice. Select the **Sonar** tab.
2. Select Frequency Label.
3. Select On [show] or Off [hide].

![2D Sonar View with Frequency Label Turned On (HELIX 9 CHIRP SI GPS G2N)](image)
**Customize the RTS Window**

The RTS Window plots the depth and intensity of a sonar return. It updates at the fastest rate possible for depth conditions and shows only the returns from the bottom, structure, and fish that are within the transducer beam. When you use the cursor to review sonar history, the sonar history will freeze, but the RTS Window will continue to display sonar returns in real time. See [Review Sonar History and Zoom In/Zoom Out](#).

1. **Main Menu**: Press the MENU key twice. Select the **Sonar** tab.
2. Select RTS Window.
3. Select the type of RTS Window to display.

<table>
<thead>
<tr>
<th>Mono</th>
<th>Sonar returns are displayed in black.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Color [Full]</td>
<td>Sonar returns are displayed in color, and they fill the width of the RTS Window.</td>
</tr>
<tr>
<td>Color [A-Scope]</td>
<td>Sonar returns are displayed in color. The size of the displayed lines correspond with the intensity of the sonar returns from the transducer beam(s).</td>
</tr>
<tr>
<td>Off</td>
<td>The RTS Window is hidden.</td>
</tr>
</tbody>
</table>

**Show/Hide Data on the Sonar View**

The settings in this section are shared with the Down Imaging View, so turning them on or off will change what is shown on the Sonar Views and the Down Imaging Views.

1. **Main Menu (Advanced User Mode)**: Press the MENU key twice. Select the **Sonar** tab.
2. Select a menu and change it to On (show) or Off (hide).

<table>
<thead>
<tr>
<th>Depth Lines</th>
<th>The depth lines show incremental marks between the upper and lower depth range. See Adjust Sonar Display Settings for details.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Color Bar</td>
<td>The Color Bar shows the palette selected on the Sonar View [see Change the View Colors] from weak to strong returns.</td>
</tr>
<tr>
<td>Temperature Graph</td>
<td>The temperature graph displays the temperature changes over the recent sonar history. A temperature input from the installed transducer or temp/speed accessory is required to enable this feature.</td>
</tr>
</tbody>
</table>

**NOTE**: Digital readouts can be displayed as an overlay, or they can be displayed in data boxes [see Views: Display Digital Readouts](#).
**Change the View Colors**

The Sonar Colors menu changes the colors used to display sonar returns on the view.

**Sonar View with Customized Sonar Colors**

1. **Sonar X-Press Menu**: With a Sonar View displayed on-screen, press the MENU key once.
2. Select Sonar Colors.
3. Select a palette.

![Color Bar with Sonar Colors Set to Palette 4](image)

**NOTE**: To display or hide the Color Bar, see *Show/Hide Data on the Sonar View*. 

**Change the Sonar Colors Palette**

1. **Sonar X-Press Menu**: With a Sonar View displayed on-screen, press the MENU key once.
2. Select Sonar Colors.
3. Select a palette.

**NOTE**: To display or hide the Color Bar, see *Show/Hide Data on the Sonar View*. 
Select a Range of the Palette (Contrast)

Contrast allows you to choose a range of the Sonar Colors palette to display sonar returns. To see the current palette, display the Color Bar on the Sonar View.

NOTE: To display or hide the Color Bar, see Show/Hide Data on the Sonar View.

When Contrast is set to 20 [default], the entire Sonar Colors palette [represented by the Color Bar] is used to display weak and strong sonar returns. As you increase the Contrast, the top range of the Color Bar is used to display all sonar returns [whether weak or strong]. As you decrease the Contrast, the bottom range of the Color Bar is used to display all sonar returns [whether weak or strong].

1. Sonar X-Press Menu: With a Sonar View displayed on-screen, press the MENU key once.
2. Select Contrast.
3. Press the RIGHT or LEFT Cursor keys to move the selection higher or lower on the color bar.
**Adjust Sonar Display Settings**

Use the instructions in this section to adjust how the sonar returns are shown on the Sonar View, so you can tune into what you want to see in the display. The settings in this section are optional. You can use the default display settings for the Sonar View, or you can customize it with your preferences.

**Filter Surface Clutter**

Use Surface Clutter to reduce the noise that may appear at the top of the view caused by algae and aeration. The lower the setting, the less surface clutter will be displayed. A higher setting allows more surface clutter to be displayed.

![NOTE: You can also adjust the Noise Filter (see Set up Sonar: Adjust the Noise Filter).](image)

1. **Main Menu:** Press the MENU key twice. Select the **Sonar** tab.
2. Select Surface Clutter.
3. Press the RIGHT or LEFT Cursor keys to adjust the setting.

**Change the 2D SwitchFire Mode**

SwitchFire controls how the sonar returns are displayed in the Sonar Views.

1. **Main Menu:** Press the MENU key twice. Select the **Sonar** tab.
2. Select 2D SwitchFire.
3. Select Clear Mode or Max Mode.

![2D SwitchFire: Clear Mode](image)

Choose Clear Mode to see less clutter and more fish size accuracy on the display. When Clear Mode is selected, the clutter is filtered, and sonar returns are interpreted to provide more details about the objects within the transducer beam, regardless of their location. In other words, a large arch on the display means a large fish has been detected.

![2D SwitchFire: Max Mode](image)

Choose Max Mode to see only raw sonar returns on the display. When Max Mode is selected, you will see the maximum sonar information available within the transducer beam, so more fish arches and better jig tracking are shown.
**Turn on/off Fish ID+ Settings**

Fish ID+ uses advanced signal processing to interpret sonar returns and will display a fish symbol on the Sonar View when very selective requirements are met. Also, if Fish ID+ is turned on, you can adjust the sensitivity used for detection and receive alerts with the Fish ID Alarm turned on.

**Fish ID+ Turned On**

When Fish ID+ is turned on, fish symbols will be shown on the Sonar View. The color of the fish symbols indicates the sonar beam location, and the fish depth is shown above the symbol.

When Fish ID+ is turned off, the control head shows only the raw sonar returns on the display.

1. **Main Menu:** Press the MENU key twice. Select the *Sonar* tab.
2. Select Fish ID+.
3. Select On or Off.

<table>
<thead>
<tr>
<th></th>
<th>Fish Symbols will display in the Sonar View when a fish is detected.</th>
</tr>
</thead>
<tbody>
<tr>
<td>On</td>
<td>Orange Fish Symbols = targets detected in the 200 kHz narrow beam and Dual Spectrum.</td>
</tr>
<tr>
<td></td>
<td>Green Fish Symbols = targets detected in the 83 kHz wide beam or 455 kHz beam [DI, CHIRP DI only].</td>
</tr>
<tr>
<td>Off</td>
<td>Raw sonar returns are shown on the Sonar View. If a fish is detected, the returns appear as arches on the display to indicate potential targets.</td>
</tr>
</tbody>
</table>
Adjust the Fish ID Sensitivity

Use Fish ID Sensitivity to adjust the threshold used for detecting a fish with Fish ID+. To display only larger species of fish as fish symbols, select a low setting. To see smaller fish species or baitfish, select a high setting. Fish ID+ must be turned on to enable this menu.

1. Turn on Fish ID+.
2. **Main Menu:** Press the MENU key twice. Select the **Sonar** tab.
3. Select Fish ID Sensitivity.
4. Press the RIGHT or LEFT Cursor keys to adjust the setting.
   - **1** = low sensitivity (large fish only)
   - **10** = high sensitivity (All: small fish up to large fish)

Turn on the Fish ID Alarm

To receive an on-screen alert when a fish is detected, turn on the Fish ID Alarm. Fish ID+ must be turned on to enable this alarm.

1. Turn on Fish ID+.
2. **Main Menu:** Press the MENU key twice. Select the **Alarms** tab.
3. Select Fish ID Alarm.
4. Select one of the following icons:
   - **Off**
   - **All**
   - **Large/Medium**
   - **Large**
**Set the Bottom View Display**

Bottom View selects the method used to represent bottom and structure on the display. Bottom View is also affected by the palette selected in Sonar Colors (see *Customize the Sonar View: Change the View Colors*).

---

**Change the Bottom View Setting**

1. **Main Menu:** Press the MENU key twice. Select the Sonar tab.
2. Select Bottom View.
3. Select one of the following modes:

<table>
<thead>
<tr>
<th>Structure ID</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Structure ID</strong></td>
<td>Structure ID will display the strongest return as specified by the palette selected in the Sonar Colors menu.</td>
</tr>
<tr>
<td><strong>WhiteLine</strong></td>
<td>WhiteLine highlights the strongest sonar returns in white. This has the benefit of clearly defining the bottom on the display.</td>
</tr>
</tbody>
</table>
The X-Press Menu provides menu options to adjust the sensitivity and range as you fish. You can also control how fast the sonar history scrolls across the screen. The menus allow you to see more or less of the sonar returns from the transducer beams as you adjust each setting. Also, you can use key shortcuts on the view.
**Adjust the Sensitivity**

Sensitivity controls how much detail is shown on the view. To eliminate the clutter from the display that is sometimes present in murky or muddy water, decrease the sensitivity. When operating in very clear water or greater depths, increase the sensitivity to see weaker returns.

**Adjust the Sensitivity using the X-Press Menu**

Use the following instructions to adjust the sensitivity.

1. **Sonar X-Press Menu:** With a Sonar View displayed on-screen, press the MENU key once.
2. Select Sensitivity.
3. Press the RIGHT or LEFT Cursor keys to increase or decrease the sensitivity.

**Adjust the Sensitivity using the ZOOM Keys**

If your control head includes +/-ZOOM keys, you can use them to adjust the sensitivity.

1. With a Sonar View displayed on-screen, press the +ZOOM key or −ZOOM key.

![Adjusting the Sensitivity using the +/-ZOOM Keys](image)
Adjust Beam Sensitivity

Your control head model may allow you to adjust the sensitivity of individual frequencies. The available frequencies are determined by your control head model and the installed transducer. Use the following instructions to adjust a single beam.

1. **Main Menu [Advanced User Mode]**: Press the MENU key twice. Select the Sonar tab.

2. Select 83 kHz Sensitivity or 455 kHz Sensitivity.

   **CHIRP Models**: Select Medium Sensitivity Offset or High (455 kHz) Sensitivity Offset [DI, CHIRP DI models only].

3. Press the RIGHT or LEFT Cursor keys to increase or decrease the sensitivity.

For example, in the illustration shown below, the sensitivity of the 83 kHz beam in the Split Sonar View can be adjusted without affecting the sensitivity of the 200 kHz sonar returns. For more information about this view, see *Compare Sonar Beams*.

![Increasing the Sensitivity of the 83 kHz Beam (83 kHz/200 kHz)](image)

Select a Range of the Palette (Contrast)

Contrast allows you to choose a range of the Sonar Colors palette to display sonar returns. To see the current palette, display the Color Bar on the Sonar View. For details, see *Customize the Sonar View: Change the View Colors* and *Show/Hide Data on the Sonar View*.

When Contrast is set to 20 [default], the entire Sonar Colors palette [represented by the Color Bar] is used to display weak and strong sonar returns. As you increase the Contrast, the top range of the Color Bar is used to display all sonar returns [whether weak or strong]. As you decrease the Contrast, the bottom range of the Color Bar is used to display all sonar returns [whether weak or strong].

1. **Sonar X-Press Menu**: With a Sonar View displayed on-screen, press the MENU key once.

2. Select Contrast.

3. Press the RIGHT or LEFT Cursor keys to move the selection higher or lower on the color bar.
## Set the Upper/Lower Range

Upper Range and Lower Range control how much of the water column is displayed on the view. For example, if you are only interested in the area between 20 and 50 feet deep, set the Upper Range to 20 and the Lower Range to 50. The view will not display sonar returns outside of the set ranges, and greater detail for the selected range will be displayed.

1. **Sonar X-Press Menu [Advanced User Mode]:** With a Sonar View displayed on-screen, press the MENU key once.
2. Select Upper Range. Press the RIGHT or LEFT Cursor keys to adjust the setting.
3. Select Lower Range. Select Auto or set a specific depth (manual).
   - **Auto:** The Lower Range will be adjusted by the control head to follow the bottom automatically.
   - **Manual:** The control head locks onto the depth you select.

**NOTE:** There must be a difference of 10 feet between the upper and lower range settings.

## Change the Chart Speed

Chart Speed controls how fast the sonar history moves across the view and how much detail is shown. A faster speed is preferred by most anglers, and the sonar history moves quickly across the view. To slow down the sonar history display, select a lower setting. Regardless of the Chart Speed setting, the RTS Window will update at the maximum rate possible for depth conditions.

1. **Sonar X-Press Menu:** With a Sonar View displayed on-screen, press the MENU key once.
2. Select Chart Speed.
3. Press the RIGHT or LEFT Cursor keys to adjust the setting.

## Turn on/off Jigging Mode (CHIRP SI, CHIRP MEGA SI, CHIRP MEGA SI+ models only)

If you have a CHIRP SI, CHIRP MEGA SI or CHIRP MEGA SI+ model, you can use Jigging Mode to refine the sonar returns shown in the Sonar View. This setting is influenced by whether 2D CHIRP Mode is turned on or off. See Set up Sonar for more information.

1. **Sonar X-Press Menu:** With a Sonar View displayed on-screen, press the MENU key once.
2. Select Jigging Mode.
3. Select On or Off.

| On | Turn on Jigging Mode if you’ve selected Medium or Medium/High Frequency in the 2D CHIRP Display Frequency menu [with 2D CHIRP Mode turned on], or if you’ve selected 83 kHz or 83/200 kHz in the 2D Display Frequency menu [with 2D CHIRP Mode turned off]. When Jigging Mode is turned on, the sonar returns are refined on the view, and the chart speed slows down to show more detail. |
| Off | Turn off Jigging Mode if you’ve selected Low Frequency in the 2D CHIRP Display Frequency menu [with 2D CHIRP Mode turned on], or if you’ve selected 200 kHz in the 2D Display Frequency menu [with 2D CHIRP Mode turned off]. Turn off Jigging Mode to display the sonar history at the selected chart speed and see coarser returns on the display. |
Change the Sonar Colors Palette

The Sonar X-Press Menu allows you to quickly change the display palette while you fish. See *Customize the Sonar View: Change the View Colors* for more information.

1. **Sonar X-Press Menu:** With a Sonar View displayed on-screen, press the MENU key once.
2. Select Sonar Colors.
3. Select a palette.

   ☢️ **NOTE:** To display or hide the Color Bar, see *Customize the Sonar View.*

Switch Frequencies

If the transducer includes more than one downbeam frequency, use the CHECK/INFO key to quickly change the frequency used in the 2D Sonar View. For more information see *Sonar Overview* and *Set up Sonar.*

1. With a Sonar View displayed on-screen, press the CHECK/INFO key.

   ![Using the CHECK key to Switch Frequencies](image)
**COMPARE SONAR BEAMS**

**SPLIT SONAR VIEW**

Split Sonar View displays sonar returns from each down beam frequency on separate sides of the view. You can use this view to make side by side comparisons between the sonar returns from both beams. The beams are determined by your Humminbird model and the installed transducer.

**Frequencies:** Use this view to compare the 83 kHz and 200 kHz beams. If you have a DI or CHIRP DI model, 455 kHz and 200 kHz will be displayed side by side in this view. When 2D CHIRP Mode is turned on, you can also compare beams.

**Fish ID+:** It is also helpful to turn on Fish ID+ in Split Sonar View so you can see where the fish are located within each transducer beam (see Adjust Sonar Display Settings: Turn on/off Fish ID+ Settings).

**Display the Split Sonar View**

1. Press and hold the VIEW key.
2. Select Sonar > Split Sonar View.

---

**Reviewing Beams Separately in Split Sonar View (83 kHz/200 kHz)**

![Diagram showing Split Sonar View with 83 kHz and 200 kHz beams](image)
**REVIEW SONAR HISTORY**

Press any arrow on the Cursor Control key, and the sonar history will freeze and the cursor will display on-screen. If you move the cursor over a sonar return, digital readouts for the cursor position are displayed on the view. The RTS Window continues to update at the fastest rate possible for depth conditions [see *Customize the Sonar View*].

**Freeze the Sonar History**

1. Press any arrow on the Cursor Control key.
2. Move the cursor over a sonar return.

**NOTE:** To mark a waypoint or start navigation to the cursor position, see *Navigation in Sonar Views*.

---

**Reviewing the Depth of the Cursor Position**

<table>
<thead>
<tr>
<th>cursor depth</th>
<th>depth below cursor</th>
<th>distance to cursor position</th>
<th>bearing to cursor position</th>
</tr>
</thead>
<tbody>
<tr>
<td>27.7 ft</td>
<td>32.4 ft</td>
<td>0.15 sm</td>
<td>178° t</td>
</tr>
</tbody>
</table>

---

![Diagram of Sonar View with cursor depth, depth below cursor, distance to cursor position, and bearing to cursor position labels.](image)
**Zoom In/Zoom Out**

Use the Sonar Zoom View to see a magnified view of the bottom and structure. For example, if there are fish close to the bottom or near structure [tree, vegetation, etc.]. Sonar Zoom View makes it easier to see the separate sonar returns that might be displayed close together.

**Display the Sonar Zoom View**

1. Press and hold the VIEW key.
2. Select Sonar > Sonar Zoom View.

**Zoom In/Zoom Out using the ZOOM Keys**

If your control head includes +/- ZOOM keys, use the instructions in this section to use the ZOOM feature.

**Magnify Bottom Structure (Zoom In/Out)**

1. Display the Sonar Zoom View on-screen.
2. **Zoom In:** Press the +ZOOM key.
   
   **Zoom Out:** Press the -Zoom key.

**Magnify the Cursor Position (Zoom In/Out)**

1. Display the Sonar Zoom View on-screen.
2. Use the Cursor Control key to move the cursor to a position on the view.
3. **Zoom In:** Press the +ZOOM key.
   
   **Zoom Out:** Press the -Zoom key.

4. **Close:** Press the EXIT key.
Magnifying Sonar Returns in Sonar Zoom View (Bottom Lock Off)

- **Zoom In** (2x)
- **Zoom Out**
- **Move the Cursor**

**Zoom Level**: 2x

**Upper Range, Zoom View**: 15

**Upper Range, Full Range View**: 0

**Lower Range, Zoom View**: 35

**Lower Range, Full Range View**: 40
**Zoom In/Zoom Out using the X-Press Menu**

If your control head does not include ZOOM keys, you will use the Zoom Level menu to use the ZOOM feature.

**Magnify Bottom Structure (Zoom In/Out)**
1. Display the Sonar Zoom View on-screen.
2. Press the MENU key once.
3. Select Zoom Level.
4. Press the RIGHT or LEFT Cursor keys to adjust the setting.

**Magnify the Cursor Position (Zoom In/Out)**
1. Display the Sonar Zoom View on-screen.
2. Use the Cursor Control key to move the cursor to a position on the view.
3. Press the MENU key once.
4. Select Zoom Level.
5. Press the RIGHT or LEFT Cursor keys to adjust the setting.
6. **Close:** Press the EXIT key.
Adjust Sonar Zoom View Display Settings

Turn on/off Bottom Lock
Use Bottom Lock and Bottom Range to focus on the bottom and control how much of the water column is shown in Sonar Zoom View. Bottom Lock continuously graphs the bottom at a constant point on the display regardless of changes in depth. This “flattens” out the bottom contour but is effective at showing fish on or near the bottom.

1. **Sonar X-Press Menu:** With a Sonar Zoom View displayed on-screen, press the MENU key once.
2. Select Bottom Lock. Press the RIGHT Cursor key to select On.
3. Press the UP Cursor key. Select Bottom Range.
4. Press the RIGHT or LEFT Cursor keys to adjust the range. The range is measured up from the bottom.

   **Low Setting:** useful for seeing low-lying bottom structure or details of the bottom return.

   **High Setting:** useful for seeing large structure in deeper water.

   **NOTE:** If you see a wavy band on the view that mirrors the change in depth, the Bottom Range might be set deeper than the actual water depth. In this case, decrease the Bottom Range setting.

Change the Width of the Zoomed View
Use the instructions in this section to change the width of the zoomed view in Sonar Zoom View.

1. **Main Menu:** Press the MENU key twice. Select the Sonar tab.
2. Select Zoom Width.
3. Press the RIGHT or LEFT Cursor keys to adjust the setting.

![Setting the Bottom Range and Zoom Width (Bottom Lock On)](image)
**NAVIGATION IN SONAR VIEWS**

To mark waypoints and start navigation, the control head must have a GPS Fix from a connected or internal GPS receiver. See *Getting Started* for more information.

---

**Mark a Waypoint**

You can mark a waypoint at the boat position or the cursor position. Waypoints are saved to the Waypoint Management dialog box (see *Manage your Navigation Data*).

---

**Mark a Waypoint at the Boat Position**

1. Press the MARK key.

---

**Mark a Waypoint at the Cursor Position**

1. Use the Cursor Control key to move the cursor to a position on the view.
2. Press the MARK key twice.

---

**Marking a Waypoint at the Cursor Position**

![Waypoint Creation](image)
Navigate to a Position

Use the instructions in this section to start navigation to a position in the view. See Navigation Overview for more information about these features.

Navigate to the Cursor Position

1. Use the Cursor Control key to move the cursor to a position on the view.
2. Press the GOTO key twice.
   
   When you press the GOTO key, a waypoint will be marked at the cursor position.

Navigate to a Saved Position

If you press the GOTO key, you can choose to start navigation from a list of saved waypoints and routes.

1. Press the GOTO key.
2. Select Nav Data. Press the RIGHT Cursor key.
3. Use the Cursor Control key to select a saved waypoint or route.
4. Press the RIGHT Cursor key to start navigation.

Cancel Navigation

1. Press the MENU key once.
Starting Navigation to the Cursor Position

Move the Cursor
Press Twice to Start Navigation
Circular Flasher View provides two ways to view sonar data in traditional flasher format. The view is available on ICE HELIX CHIRP models and compatible HELIX 5 and 7 G2/G2N models with Ice Fishing mode turned on. To enable Ice Fishing mode, see the instructions below.

**Turn on Ice Fishing Mode**

If you have an ICE HELIX CHIRP model, proceed to *Display the Circular Flasher View*.

1. **Preparation:** Confirm your control head software is up to date. See [Update Software].
2. **Main Menu:** Press the MENU key twice. Select the **Sonar** tab.
3. Select Ice Fishing.
4. Press the RIGHT Cursor key.
   - The control head will automatically restart.
   - To return to Open Water mode, repeat step 2 and select Open Water.

**Display the Circular Flasher View**

1. Press and hold the VIEW key.
2. Select Sonar > Circular Flasher View.

**Select the Digital Depth Source (DI, CHIRP DI models only)**

If you connect an ice transducer to the HELIX DI G2, HELIX CHIRP DI G2, or HELIX CHIRP DI GPS G2/G2N control head, set the Digital Depth Source to 2D Element. See [Set up Sonar] for details.

1. **Main Menu [Advanced User Mode]:** Press the MENU key twice. Select the **Sonar** tab.
2. Select Digital Depth Source.
3. Select 2D Element.
**UNDERSTAND THE CIRCULAR FLASHER VIEW**

Like a traditional sonar view, the Circular Flasher View displays the sonar return intensity with different colors. The view is maximized with information you need for ice fishing, including the current depth, connected battery power percentage, and related menu settings.

Strong returns often result from rocky or hard bottoms (compacted sediment, rocks, fallen trees), while weaker returns often result from soft bottoms (sand, mud), vegetation, and small fish.

The colors used to represent high, medium, to low intensity returns are determined by the palette you choose [see Adjust Settings While you Fish: Change the Sonar Colors Palette].

---

Circular Flasher View (ICE HELIX 7 CHIRP)

- **Current depth reading**
- **Zoom range**
- **Zoom level**
- **Cone angle**
- **Percentage of power for connected battery**
- **CHIRP IR setting**

Related menu settings are displayed in the center of the circular flasher view and include the current depth range and lower range mode indicator (Auto [A] or Manual [M]), sonar color palette, and gain.
**Adjust Settings while you Fish**

The X-Press Menu provides menu options to adjust the sensitivity and range as you fish. The menus allow you to see more or less of the sonar returns from the transducer beams as you adjust each setting. Also, you can use key shortcuts on the views.

---

**Adjusting Settings from the X-Press Menu (ICE HELIX 7 CHIRP)**

---

**Adjust the Gain (Sensitivity)**

Gain (or Sensitivity, depending on your control head model) controls how much detail is shown on the view. To eliminate the clutter from the display that is sometimes present in murky or muddy water, decrease the gain. When operating in very clear water or greater depths, increase the gain to see weaker returns.

---

**Adjust the Gain using the X-Press Menu**

Use the following instructions to adjust the gain.

1. **Circular Flasher X-Press Menu:** With the Circular Flasher View displayed on-screen, press the MENU key once.
2. Select Gain.
3. Press the RIGHT or LEFT Cursor keys to increase or decrease the gain.

**KEY SHORTCUT:** In Sonar View, press the +ZOOM key to increase the gain and the –ZOOM key to decrease the gain.
**Adjust for Interference (CHIRP models only)**

If you are fishing near other ICE flashers or transducers, use CHIRP IR (Interference Rejection) to reduce interference or noise on the sonar display.

**Set the CHIRP Interference Rejection (CHIRP IR) using the X-Press Menu**

1. **Circular Flasher X-Press Menu:** With the Circular Flasher View displayed on-screen, press the MENU key once.
2. Select CHIRP IR.
3. Press the RIGHT or LEFT Cursor keys to adjust the setting.

**KEY SHORTCUT:** With the Circular Flasher View displayed on-screen, press the CHECK/INFO key to adjust the CHIRP IR setting.

**Set the Cone Angle (CHIRP models only)**

Use the following instructions to set the angle of the sonar beam. CHIRP IR must be turned off to set the Cone Angle.

1. **Circular Flasher X-Press Menu:** With the Circular Flasher View displayed on-screen, press the MENU key once.
2. Select Cone Angle.
3. Press the RIGHT or LEFT Cursor keys to adjust the setting.

<table>
<thead>
<tr>
<th>Cone Angle</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>15°</td>
<td>Select 15° for a narrowly focused down beam.</td>
</tr>
<tr>
<td>21°</td>
<td>Select 21° for a wide down beam and larger coverage area.</td>
</tr>
<tr>
<td>15°-21°</td>
<td>Select 15°-21° to use the full frequency range for your transducer.</td>
</tr>
</tbody>
</table>

**Set the Upper/Lower Range**

Upper Range and Lower Range control how much of the water column is displayed on the view. For example, if you are only interested in the area between 20 and 50 feet deep, set the Upper Range to 20 and the Lower Range to 50. The view will not display sonar returns outside of the set ranges, and greater detail for the selected range will be displayed.

1. **Circular Flasher X-Press Menu:** With the Circular Flasher View displayed on-screen, press the MENU key once.
2. Select Upper Range. Press the RIGHT or LEFT Cursor keys to adjust the setting.
3. Select Lower Range. Select Auto or set a specific depth (manual).

**Auto:** The Lower Range will be adjusted by the control head to follow the bottom automatically.

**Manual:** The control head locks onto the depth you select.

**NOTE:** There must be a difference of 10 feet between the upper and lower range settings.
**Change the Flasher Window Style**

The Flasher Window displays the depth and intensity of the sonar returns. You can change the display style for the sonar returns using the instructions below. You can also change the sonar colors used for sonar returns. For details, see *Change the Sonar Colors Palette*.

1. **Circular Flasher X-Press Menu**: With the Circular Flasher View displayed on-screen, press the MENU key once.
2. Select Flasher Style.
3. Select the type of Flasher Style to display.

<table>
<thead>
<tr>
<th>Color (Full)</th>
<th>Sonar returns are displayed in color, and they fill the width of the Flasher Window.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Color (A-Scope)</td>
<td>Sonar returns are displayed in color. The size of the displayed lines correspond with the intensity of the sonar returns from the transducer beam(s).</td>
</tr>
</tbody>
</table>

*Flasher Style Set to Color (A-Scope)*

The size of the sonar returns correspond with the intensity of the sonar returns from the transducer beam(s).
**Select a Range of the Palette (Contrast)**

Contrast allows you to choose a range of the Color Palette to display sonar returns. For details, see *Change the Sonar Colors Palette*.

When Contrast is set to 20 (default), the entire palette is used to display weak and strong sonar returns. As you increase the Contrast, fewer colors within the selected palette are used to display the sonar returns (whether weak or strong).

1. **Main Menu (Advanced User Mode):** Press the MENU key twice. Select the Sonar tab.
2. Select Contrast.
3. Press the RIGHT or LEFT Cursor keys to increase or decrease the contrast.

**Change the Sonar Colors Palette**

The X-Press Menu allows you to quickly change the display palette while you fish. The Color Palette menu shows a preview of the palette, and the weak to strong sonar return range is displayed from left to right.

1. **Circular Flasher X-Press Menu:** With the Circular Flasher View displayed on-screen, press the MENU key once.
2. Select Sonar Colors.
3. Select a palette.

**Turn on/off Jigging Mode (Side Imaging models only)**

If you have a Side Imaging model, you can use Jigging Mode to refine the sonar returns shown in the Sonar View. This setting is influenced by whether 2D CHIRP Mode is turned on or off. See *Set up Sonar* for more information.

1. **Circular Flasher X-Press Menu:** With a Sonar View displayed on-screen, press the MENU key once.
2. Select Jigging Mode.
3. Select On or Off.

| On | Turn on Jigging Mode if you’ve selected Medium or Medium/High Frequency in the 2D CHIRP Display Frequency menu (with 2D CHIRP Mode turned on), or if you’ve selected 83 kHz or 83/200 kHz in the 2D Display Frequency menu (with 2D CHIRP Mode turned off). When Jigging Mode is turned on, the sonar returns are refined on the view, and the chart speed slows down to show more detail. |
| Off | Turn off Jigging Mode if you’ve selected Low Frequency in the 2D CHIRP Display Frequency menu (with 2D CHIRP Mode turned on), or if you’ve selected 200 kHz in the 2D Display Frequency menu (with 2D CHIRP Mode turned off). Turn off Jigging Mode to display the sonar history at the selected chart speed and see coarser returns on the display. |

**Switch Frequencies (key shortcut)**

If the transducer includes more than one down beam frequency, use the CHECK/INFO key to quickly change the frequency used in the Circular Flasher View. For more information see *Set up Sonar*.

1. Press the CHECK/INFO key.
**Move the Depth Cursor**

Use the Depth Cursor to identify a depth on the Circular Flasher View.

**NOTE:** Ice Fishing Mode must be turned on to enable this feature (see Display the Circular Flasher View On-Screen).

1. **Activate:** Press the DOWN Cursor key, and the purple cursor line will display on the dial.
2. **Adjust the Cursor:** Press the UP or DOWN Cursor keys.
3. **EXIT:** Press the EXIT key.

**Circular Flasher View with Depth Cursor Displayed**

- Depth cursor setting
- Depth cursor (purple line)
**Zoom In/Out in Circular Flasher View**

The Zoom feature displays a 2x magnified view of the area you choose on the Circular Flasher View.

![NOTE: Ice Fishing Mode must be turned on to enable this feature (see Display the Circular Flasher View On-Screen).]

**ZOOM In/Out using the ZOOM Keys**

1. **Activate:** Press the +ZOOM key.
2. **Adjust the Zoom Range:** Press the RIGHT or LEFT Cursor keys to move the white zoom lines on the flasher dial.
3. **Close Zoom:** Press -ZOOM key.

**ZOOM In/Out using the Circular Flasher X-Press Menu**

If your control head model does not include ZOOM keys, you will use the Zoom Level menu.

1. **Circular Flasher X-Press Menu:** With the Circular Flasher View displayed on-screen, press the MENU key once.
2. **Select Zoom Level.**
3. **Select 2X.**
4. **Adjust the Zoom Range:** Press the RIGHT or LEFT Cursor keys to move the white zoom lines on the flasher dial.
5. **Close Zoom:** Press the MENU key. Select Zoom Level > 1X.
Magnifying Sonar Returns in the Circular Flasher View

Zoom range

Zoom view (2X magnification)

ZOOM In

Move the Zoom Range
Using Sonar Zoom View in Ice Fishing Mode

(ICE HELIX CHIRP and HELIX 5 and 7 G2/G2N Models Only)

Sonar Zoom View provides additional ways to view sonar data for ice fishing. To enable Ice Fishing mode, see Display the Circular Flasher View On-Screen: Turn on Ice Fishing Mode.

Display the Sonar Zoom View

1. Press and hold the VIEW key.
2. Select Sonar > Sonar Zoom View.

Sonar Zoom View (ICE HELIX 7 CHIRP)

- Active Cursor and Cursor Dialog Box (see Show the Cursor)
- Zoomed view
- Zoom preview, bottom range
- Full range
- RTS window (narrow)
**Show the Cursor**

To move the cursor in Sonar Zoom View, you must activate the cursor in the X-Press Menu.

1. **Sonar X-Press Menu:** With the Sonar Zoom View displayed on-screen, press the MENU key once.
2. Select Show Cursor.
3. Press the RIGHT Cursor key.

---

**Adjust the Zoom RTS Window**

The RTS Window plots the depth and intensity of a sonar return. It updates at the fastest rate possible for depth conditions and shows only the returns from the bottom, structure, and fish that are within the transducer beam. To customize the RTS Window display, see *Customize the Sonar View: Customize the RTS Window*.

In Sonar Zoom View, you can adjust the width of the RTS Zoom window. See below.

1. **Sonar X-Press Menu:** With the Sonar Zoom View displayed on-screen, press the MENU key once.
2. Select Zoom RTS Mode.
3. Press the RIGHT or LEFT Cursor keys to adjust the setting.

---

**Setting the RTS Window Width**
Display a Down Imaging View (Down Imaging and Side Imaging models only)

There are a variety of views available to display Down Imaging data. You can also customize the view by showing or hiding information [see Customize the Down Imaging View], and you can adjust the sonar settings to refine the information displayed on-screen [see Adjust Settings While you Fish]. The changes you make are applied to all Down Imaging views.

Display a Down Imaging View
1. Press and hold the VIEW key.
2. Select Sonar > Down Imaging View.

Display a Down Imaging Combo View
1. Press and hold the VIEW key.
2. To open a Down Imaging Combo View, select Sonar.
   To open a Chart Combo View (Down Imaging and Chart together), select Chart.
3. Select a view to display on-screen. Press the RIGHT Cursor key.

For more information, see the Sonar section.

For more information, see the Side Imaging section.

For more information, see the Sonar and Side Imaging sections.
NOTE: The available views are determined by your control head model and the installed transducer. For a complete list of the views available on your control head, press the MENU key twice, and select the Views tab. See each related section of the manual (Views, Sonar, Side Imaging, Navigation Overview, etc.) for more information.
Understand the Down Imaging View

The images you see on the Down Imaging display are produced using sonar technology. Each time the unit pings, a strip of data representing all the echoes received by the transducer are put together on the display to form the image that you see. Like traditional 2D Sonar, the sonar history scrolls left across the screen.

Down Imaging beams “illuminate” the bottom contour, structure, and fish. The beams are wide [side to side] but very thin from front to back.

Use the light and dark parts of the display to interpret the objects under your boat as follows:

**Dark shades** represent soft returns [mud, sand] or descending terrain.

**Light shades** represent denser terrain [timber, rocks] or rising terrain. A very hard bottom may appear as white on the display.

**White Streaks** or **Clouds** may represent fish on the display.

**Shadows** are not caused by light but by the lack of a sonar return. Objects standing on the bottom cause a sonar shadow to appear on the display. The longer the shadow, the taller the object. Fish may also cast shadows. You can use the shadow to interpret where the fish or object is located in relation to the bottom.
**Customize the Down Imaging View**

You can customize the Down Imaging views by showing or hiding information, such as depth lines, temperature graph, and digital readouts. You can also change the color palette.

**Show/Hide Depth Lines**

The depth lines show incremental marks between the upper and lower depth range. See *Adjust Settings While you Fish* for details. The Depth Lines menu is shared with the Sonar View, so turning them on or off will affect the Sonar Views and the Down Imaging Views.

1. **Main Menu (Advanced User Mode):** Press the MENU key twice. Select the **Sonar** tab.
2. Select Depth Lines.
3. Select On (show) or Off (hide).

**Show/Hide the Temperature Graph**

The temperature graph displays the temperature changes over the recent sonar history. A temperature input from the installed transducer or temp/speed accessory is required to enable this feature. The Temperature Graph menu is shared with the Sonar View, so turning it on or off will affect the Sonar Views and the Down Imaging Views.

1. **Main Menu:** Press the MENU key twice. Select the **Sonar** tab.
2. Select Temperature Graph.
3. Select On (show) or Off (hide).

---

*NOTE:* Digital readouts can be displayed as an overlay, or they can be displayed in data boxes [see *Views: Display Digital Readouts*].
Change the View Colors

The DI Colors menu changes the palette used to display sonar returns on the view.

Change the Down Imaging Colors Palette

1. Down Imaging X-Press Menu: With a Down Imaging View displayed on-screen, press the MENU key once.
2. Select DI Colors.
3. Select a palette.
Show/Hide the Frequency Label

The Frequency Label displays the currently selected frequencies. See *Set up Sonar*.

1. **Main Menu**: Press the MENU key twice. Select the **Sonar** tab.
2. Select Frequency Label.
3. Select On (show) or Off (hide).

*Down Imaging View with the Frequency Label Turned On*
Adjust Settings while you Fish

The X-Press Menu provides menu options to adjust the sensitivity and range as you fish. You can also control how fast the sonar history scrolls across the screen. The menus allow you to see more or less of the sonar returns from the transducer beams as you adjust each setting. Also, you can use key shortcuts on the view.

Adjusting Settings from the Down Imaging X-Press Menu

91 Down Imaging Sonar
**Adjust Sensitivity**

Sensitivity controls how much detail is shown on the view. You can adjust sensitivity from the X-Press Menu or the DI Enhance menu [see *Enhance the Down Imaging View*]. The sensitivity can also be adjusted using the +/− ZOOM keys.

**Decrease the sensitivity** to eliminate the clutter from the display that is sometimes present in murky or muddy water. When operating in very clear water or greater depths, **increase the sensitivity** to see weaker returns.

### Adjust the Sensitivity using the X-Press Menu

1. **Down Imaging X-Press Menu:** With a Down Imaging View displayed on-screen, press the MENU key once.
2. Select Down Sensitivity.
3. Press the RIGHT or LEFT Cursor keys to increase or decrease the sensitivity.

### Adjust the Sensitivity using the ZOOM Keys

If your control head includes +/-ZOOM keys, you can use them to adjust the sensitivity.

1. With a Sonar View displayed on-screen, press the +ZOOM key or −ZOOM key.

**Adjusting the Sensitivity using the +/-ZOOM Keys**

![Adjusting the Sensitivity using the +/-ZOOM Keys](image)

**Increase Sensitivity**

**Decrease Sensitivity**
Enhance the Down Imaging View

The DI Enhance menu allows you to adjust the sensitivity, contrast, and sharpness on the Down Imaging View. As you adjust each setting, the changes are displayed immediately on the view.

Enhance the Down Imaging View

1. **Down Imaging X-Press Menu:** With a Down Imaging View displayed on-screen, press the MENU key once.
2. Select DI Enhance. Press the RIGHT Cursor key.
3. Use the Cursor Control key to select each menu and adjust the setting.

<table>
<thead>

</tr>
<tr>
<td><strong>Contrast</strong></td>
<td>Adjust the Contrast setting to accent the light and dark parts of the Down Imaging data to provide greater definition. To intensify the strong returns, increase the contrast. To intensify the weak returns, decrease the contrast.</td>
</tr>
<tr>
<td><strong>Sharpness</strong></td>
<td>Turn on sharpness and select a filter level to sharpen the edges of the Down Imaging data.</td>
</tr>
</tbody>
</table>
**Set the Upper/Lower Range**

Upper Range and Lower Range control how much of the water column is displayed on the view. For example, if you are only interested in the area between 20 and 50 feet deep, set the Upper Range to 20 and the Lower Range to 50. The view will not display sonar returns outside of the set ranges, and greater detail for the selected range will be displayed.

1. **Down Imaging X-Press Menu [Advanced User Mode]:** With a Down Imaging View displayed on-screen, press the MENU key once.
2. Select Upper Range. Press the RIGHT or LEFT Cursor keys to adjust the setting.
3. Select Lower Range. Select Auto or set a specific depth (manual).
   - **Auto:** The Lower Range will be adjusted by the control head to follow the bottom automatically.
   - **Manual:** The control head locks onto the depth you select.

   **NOTE:** There must be a difference of 10 feet between the upper and lower range settings.

**Change the Chart Speed**

Chart Speed controls how fast the sonar history moves across the view and how much detail is shown.

1. **Down Imaging X-Press Menu:** With a Down Imaging View displayed on-screen, press the MENU key once.
2. Select Chart Speed.
3. Press the RIGHT or LEFT Cursor keys to adjust the setting.

**Change the DI Colors**

The Down Imaging X-Press Menu allows you to quickly change the display palette while you fish. See *Customize the Down Imaging View: Change the View Colors* for more information.

1. **Down Imaging X-Press Menu:** With a Down Imaging View displayed on-screen, press the MENU key once.
2. Select DI Colors.
3. Select a palette.

**Change the Imaging SwitchFire Mode**

Imaging SwitchFire controls how the sonar returns are displayed in the Down Imaging and Side Imaging Views.

1. **Main Menu:** Press the MENU key twice. Select the Sonar tab.
2. Select Imaging SwitchFire.
3. Select Clear Mode or Max Mode.
   - **Clear Mode:** Clutter is filtered, and sonar returns are interpreted to provide more details on-screen about the objects within the transducer beam(s).
   - **Max Mode:** The view shows the most sonar information available within the transducer beam(s).
Switch Frequencies

If the transducer includes more than one frequency for Down Imaging, use the CHECK/INFO key to quickly change the frequency used in the Down Imaging View. For more information see Sonar Overview and Set up Sonar.

1. With a Down Imaging View displayed on-screen, press the CHECK/INFO key.

Using the CHECK key to Switch Frequencies (HELIX 9 CHIRP DI GPS G2N)
**Freeze the Down Imaging View**

Press any arrow on the Cursor Control key, and the sonar history will freeze and the cursor will display on-screen. If you move the cursor over a sonar return, digital readouts for the cursor position are displayed on the view.

1. Press any arrow on the Cursor Control key.
2. Move the cursor over a sonar return.
3. Review the cursor position and depth information in the digital readouts.

**NOTE:** To mark a waypoint or start navigation to the cursor position, see *Navigation in Down Imaging Views.*

---

**Zoom In/Zoom Out using the X-Press Menu**

If your control head does not include ZOOM keys, you will use the X-Press menu to magnify a selected part of the view.

1. Use the Cursor Control key to move the cursor to a position on the view.
2. Press the MENU key once.
3. Select DI Zoom.
4. Press the RIGHT or LEFT Cursor keys to adjust the setting.
5. **Close:** Turn off DI Zoom.

---

**Zoom In/Zoom Out using the ZOOM Keys**

If your control head includes +/-ZOOM keys, use the instructions in this section to magnify the selected part of the view.

1. Use the Cursor Control key to move the cursor to a position on the view.
2. **Zoom In:** Press the +ZOOM key.
   
   **Zoom Out:** Press the −ZOOM key.
3. **Close:** Press the EXIT key.
Zooming into the Down Imaging History

Move the Cursor
ZOOM In
ZOOM Out
**NAVIGATION IN DOWN IMAGING VIEWS**

To mark waypoints and start navigation, the control head must have a GPS Fix from a connected or internal GPS receiver. See *Getting Started* for more information.

**Mark a Waypoint**

You can mark a waypoint at the boat position or the cursor position. Waypoints are saved to the Waypoint Management dialog box [see *Manage your Navigation Data*].

**Mark a Waypoint at the Boat Position**

1. Press the MARK key.

**Mark a Waypoint at the Cursor Position**

1. Use the Cursor Control key to move the cursor to a position on the view.
2. Press the MARK key twice.

![Marking a Waypoint at the Cursor Position](image)
**Navigate to a Position**

Use the instructions in this section to start navigation to a position in the view. See *Navigation Overview* for more information about these features.

**Navigate to the Cursor Position**

1. Use the Cursor Control key to move the cursor to a position on the view.
2. Press the GOTO key twice.

   When you press the GOTO key, a waypoint will be marked at the cursor position.

**Navigate to a Saved Position**

If you press the GOTO key, you can choose to start navigation from a list of saved waypoints and routes.

1. Press the GOTO key.
2. Select Nav Data. Press the RIGHT Cursor key.
3. Use the Cursor Control key to select a saved waypoint or route.
4. Press the RIGHT Cursor key to start navigation.

**Cancel Navigation**

1. Press the MENU key once.
DISPLAY A SIDE IMAGING VIEW ON-SCREEN

There are a variety of views available to display Side Imaging data. You can also customize the view by showing or hiding information [see Customize the Side Imaging View], and you can adjust the sonar settings to maximize the information displayed on-screen [see Adjust Settings While you Fish]. The changes you make are applied to all Side Imaging views.

Display a Side Imaging View

1. Press and hold the VIEW key.
2. Select Sonar > Side Imaging View.

Display a Side Imaging Combo View

1. Press and hold the VIEW key.
2. To open a Side Imaging Combo View, select Sonar.
   To open a Chart Combo View (Side Imaging and Chart together), select Chart.
3. Select a view to display on-screen. Press the RIGHT Cursor key.

Sonar > Side/Side Combo View
Sonar > Side/Sonar Combo View
Sonar > Down/Side Combo View

For more information, see
Adjust Settings While you Fish: Display Beams.
For more information, see the Sonar section.
For more information, see the Down Imaging section.
NOTE: The available views are determined by your control head model and the installed transducer. For a complete list of the views available on your control head, press the MENU key twice, and select the Views tab. See each related section of the manual (Views, Sonar, Down Imaging, Navigation Overview, etc.) for more information.
**UNDERSTAND THE SIDE IMAGING VIEW**

Side Imaging beams “illuminate” the bottom contour, structure, and fish. The side beam coverage is very thin from front to back, yet very wide from top to bottom. The bottom composition determines the intensity of the sonar return, and upward slopes that face the transducer reflect sonar better than downward slopes that face away from the transducer.

For Best Side Imaging Performance

- Boat Speed: trolling
- Straight line navigation
- Minimum turning time and wave turbulence

Use the light and dark parts of the display to interpret the objects on the view as follows:

- **Shadows**: The longer the shadow, the taller the object. Fish also cast shadows, and their distance from the bottom can be interpreted by their shadow.

- **Light Shades** represent denser terrain (possibly compacted sediment, timber, rocks) or rising terrain.

- **Water Column**: shows the relative depth of the water under the boat at any given time. Variations in the width of the water column show variations in the distance to the bottom as the boat passes over. See the illustration *Interpreting the Side Imaging View*.

- **White Streaks** or **Clouds** may represent fish on the display.

- **Dark Shades** represent soft returns (possibly sand or mud) or descending terrain.
To visualize how Side Imaging works, the Side Imaging View illustration can be folded down the middle and then folded again at the lowest point of the water column. The raised area reveals the water column with its relative depth of the water under the boat. In the Side Imaging View, variations in the width of the water column show variations in the distance to the bottom as the boat passes over. 

**NOTE:** See humminbird.com for tutorials and Side Imaging videos.
Customize the Side Imaging View

The settings in this section are optional. You can use the default settings for the view, or you can customize it with your preferences.

Show/Hide SI Range Lines

SI Range Lines divide each side beam range into equal sections on the Side Imaging View. Use the range lines to estimate the location of objects. You can show or hide range lines on the view.

- **Note:** The range numbers are estimated and should not be used for measurement. If SI Range Lines and Contour Mode are turned on, the SI Range Lines will remain on the display, but the individual range numbers will not be available.

1. **Main Menu:** Press the MENU key twice. Select the Sonar tab.
2. Select SI Range Lines.
3. Select On (show) or Off (hide).

Show/Hide Digital Readouts on the Side Imaging View

If you have Digital Readouts set to Boxes on all views, you can hide the digital readout boxes on the Side Imaging View exclusively. For details, see Views: Display Digital Readouts.

1. **Main Menu:** Press the MENU key twice. Select the Sonar tab.
2. Select SI Readouts.
3. Select On (show) or Off (hide).
Change the View Colors

The SI Colors menu changes the colors used to display sonar returns on the view.

1. **Side Imaging X-Press Menu:** With a Side Imaging View displayed on-screen, press the MENU key once.
2. Select SI Colors.
3. Select a palette.

*Side Imaging View with Palette 1 Displayed*
Show/Hide the Frequency Label

The Frequency Label displays the currently selected frequencies. See *Set up Sonar*.

1. **Main Menu**: Press the MENU key twice. Select the **Sonar** tab.
2. Select Frequency Label.
3. Select On (show) or Off (hide).

*Side Imaging View with the Frequency Label Turned On*
Adjust Settings while you Fish

The X-Press Menu provides menu options to adjust the sensitivity and range as you fish. You can also control how fast the sonar history scrolls down the screen. The menu options allow you to see more or less of the sonar returns from the transducer beams as you adjust each setting. Also, you can use key shortcuts on the view.

Adjust Sensitivity

Sensitivity controls how much detail is shown on the view. You can adjust sensitivity from the X-Press Menu or the Enhance menu (see Enhance the Side Imaging View). The sensitivity can also be adjusted using the +/- ZOOM keys.

Decrease the sensitivity to eliminate the clutter from the display that is sometimes present in murky or muddy water. When operating in very clear water or greater depths, increase the sensitivity to see weaker returns.

Adjust the Sensitivity using the X-Press Menu

1. Side Imaging X-Press Menu: With a Side Imaging View displayed on-screen, press the MENU key once.
2. Select SI Sensitivity.
3. Press the RIGHT or LEFT Cursor keys to increase or decrease the sensitivity.

Adjust the Sensitivity using the ZOOM Keys

If your control head includes +/-ZOOM keys, you can use them to adjust the sensitivity.

1. With a Sonar View displayed on-screen, press the +ZOOM key or -ZOOM key.
### Adjusting the Sensitivity using the +/- ZOOM Keys

Enhance the Side Imaging View

The SI Enhance menu allows you to adjust the sensitivity, contrast, and sharpness on the Side Imaging View. As you adjust each setting, the changes are displayed immediately on the view, so you can fine tune the display. You can also turn on/off the Contour Mode from this menu so the water column is displayed or hidden on the view.

Enhance the Side Imaging View

1. **Side Imaging X-Press Menu:** With a Side Imaging View displayed on-screen, press the MENU key once.
2. Select SI Enhance. Press the RIGHT Cursor key.
3. Use the Cursor Control key to select each menu and adjust the setting.
### Sensitivity
Sensitivity controls how much detail is shown on the view. **Decrease the sensitivity** to eliminate the clutter from the display that is sometimes present in murky or muddy water. When operating in very clear water or greater depths, **increase the sensitivity** to see weaker returns that may be of interest. This menu can also be adjusted from the Side Imaging X-Press Menu (SI Sensitivity).

### Contrast
Adjust the Contrast setting to accent the light and dark parts of the Side Imaging data to provide greater definition. To intensify the strong returns, increase the contrast. To intensify the weak returns, decrease the contrast.

### Sharpness
Turn on sharpness and select a filter level to sharpen the edges of the Side Imaging data.

### Contour Mode
Contour Mode controls how the water column is displayed in the Side Imaging Views. **When Contour Mode is turned off**, the water column is displayed on the view. The location of a target on the display is based on the slant range to the target.

**When Contour Mode is turned on**, the bottom is graphed at a constant point on the display, regardless of changes in depth. The Side Imaging beams are divided by a vertical line. The water column is removed from the view, which allows the display to show targets at their linear horizontal distance. The location of a target may be easier to interpret when the water column is removed.

**Contour Mode Off**
- The water column is displayed on the Side Imaging View.

**Contour Mode On**
- The water column is removed from the Side Imaging View.
Adjust the Side Imaging Range

SI Range sets the deepest range that will be displayed on the Side Imaging views. Choose a low range number to focus on a shorter distance of the water column and see greater detail on the view. Choose a higher range number to see farther into the water and see an overview of details on the screen.

1. Side Imaging X-Press Menu: With a Side Imaging View displayed on-screen, press the MENU key once.
2. Select SI Range.
   - Auto: The Range will be adjusted by the control head to follow the bottom automatically.
   - Manual: The control head locks onto the depth you select.

Side Imaging units default to the Side Imaging range setting if the SI Range is set deeper than the Max Depth. See Set up Sonar for more information.

Display Beams

Use SI Side to select which Side Imaging beam will be shown on the display.

Select Beams to Display on the View

1. Side Imaging X-Press Menu: With a Side Imaging View displayed on-screen, press the MENU key once.
2. Select SI Side.
3. Select a beam or both beams to display.
Select Beams to Display on the Side/Side Combo View

Use the Side/Side Combo View to focus on each side or one side.

1. Press and hold the VIEW key.
2. Select Sonar > Side/Side Combo View.
3. Press the RIGHT Cursor key.
4. X-Press Menu: Press the MENU key once.
5. Select Active Pane.
6. Select Upper or Lower.
7. Select SI Side.
8. Select a beam or both beams to display.

Change the Chart Speed

Chart Speed controls how fast the sonar history moves down the view and how much detail is shown.

1. Side Imaging X-Press Menu: With a Side Imaging View displayed on-screen, press the MENU key once.
2. Select Chart Speed.
3. Press the RIGHT or LEFT Cursor keys to adjust the setting.

Change the View Colors

The Side Imaging X-Press Menu allows you to quickly change the display palette while you fish. See Customize the Side Imaging View: Change the View Colors for more information.

1. Side Imaging X-Press Menu: With a Side Imaging View displayed on-screen, press the MENU key once.
2. Select SI Colors.
3. Select a palette.
**Change the Imaging SwitchFire Mode**

Imaging SwitchFire controls how the sonar returns are displayed in the Down Imaging and Side Imaging Views.

1. **Main Menu:** Press the MENU key twice. Select the **Sonar** tab.
2. Select Imaging SwitchFire.
3. Select Clear Mode or Max Mode.
   - **Clear Mode:** Clutter is filtered, and sonar returns are interpreted to provide more details on-screen about the objects within the transducer beam(s).
   - **Max Mode:** The view shows the most sonar information available within the transducer beam(s).

**Switch Frequencies (CHIRP MEGA SI, CHIRP MEGA SI+ models only)**

If the transducer includes more than one Side Imaging frequency, use the CHECK/INFO key to quickly change the frequency used in the Side Imaging View. For more information see **Sonar Overview** and **Set up Sonar**.

1. With a Side Imaging View displayed on-screen, press the CHECK/INFO key.

---

![Using the CHECK key to Switch Frequencies (CHIRP MEGA SI) (HELIX 9 CHIRP SI GPS G2N)](image-url)
**Review Side Imaging History and Zoom In/Out**

In addition to adjusting the sonar settings while you fish, you can freeze the sonar history, magnify sonar returns, and review position information.

---

**Freeze the Side Imaging View**

Press any arrow on the Cursor Control key, and the sonar history will freeze and the cursor will display on-screen. If you move the cursor over a sonar return, digital readouts for the cursor position are displayed on the view.

1. Press any arrow on the Cursor Control key.
2. Move the cursor over a sonar return.
3. Review the cursor position and depth information in the digital readouts.

**NOTE:** To mark a waypoint or start navigation to the cursor position, see *Navigation in Side Imaging Views.*

---

**Zoom In/Zoom Out**

To take a closer look, use the ZOOM keys to magnify the selected part of the view.

1. Use the Cursor Control key to move the cursor to a position on the view.
2. **Zoom In:** Press the +ZOOM key.
   
   **Zoom Out:** Press the -ZOOM key.
3. **Close:** Press the EXIT key.
**Zooming In/Out**

<table>

**Move the Cursor**

**ZOOM In**

**ZOOM Out**
**Navigation in Side Imaging Views**

To mark waypoints and start navigation, the control head must have a GPS Fix from a connected or internal GPS receiver. See *Getting Started* for more information.

**Turn on/off SI Navigation**

SI Navigation controls how the boat icon is displayed in Side Imaging Views. See *Navigate to a Position* for more information. If SI Navigation is turned on, an arrow icon indicates the direction the boat needs to turn to reach the next waypoint during navigation.

If SI Navigation is turned off, the boat icon will not change during navigation although you can still mark waypoints and start navigation from a Side Imaging View.

1. **Main Menu:** Press the MENU key twice. Select the **Nav** tab.
3. Select On or Off.

**Mark a Waypoint**

You can mark a waypoint at the boat position or the cursor position. Waypoints are saved to the Waypoint Management dialog box (see *Manage your Navigation Data*).

**Mark a Waypoint at the Boat Position**

1. Press the MARK key.

**Mark a Waypoint at the Cursor Position**

1. Use the Cursor Control key to move the cursor to a position on the view.
2. Press the MARK key twice.

**Navigate to a Position**

Use the instructions in this section to start navigation to a position in the view. See *Navigation Overview* for more information about these features.

**Navigate to the Cursor Position**

1. Use the Cursor Control key to move the cursor to a position on the view.
2. Press the GOTO key twice.
   
   When you press the GOTO key, a waypoint will be marked at the cursor position.

**Navigate to a Saved Position**

If you press the GOTO key, you can choose to start navigation from a list of saved waypoints and routes.

1. Press the GOTO key.
2. Select Nav Data. Press the RIGHT Cursor key.
3. Use the Cursor Control key to select a saved waypoint or route.
4. Press the RIGHT Cursor key to start navigation.
Navigating to a Waypoint

1. Press the MENU key once.

Cancel Navigation
1. Press the MENU key once.
**MANAGE SCREEN SNAPSHTOS AND RECORDINGS**

Snapshot and Recording View displays the saved screen snapshots and recordings from the installed microSD or SD card (separate purchase required). Use this view to review the snapshot and recording file details, start recording, and adjust the recording settings.

**NOTE:** Also, this feature can be helpful in troubleshooting any sonar-related issues. If you contact Humminbird Customer Service for sonar troubleshooting assistance, you may be asked to perform one of the tasks in this section. See *Email Files to Customer Service* for details.

**Display the Snapshot and Recording View**

To view the saved screen snapshots from the installed microSD or SD Card, open the Snapshot and Recording View. If Screen Snapshot Waypoint is turned on when the screen snapshot is taken, you can view the saved file from Chart View.

1. Press and hold the VIEW key.
2. Select System > Snapshot and Recording View.

**Enable Screen Snapshot and Recording**

To enable Screen Snapshot and Recording, a microSD or SD card must be installed in the control head. See *HELIX Control Head* for more information. If Screen Snapshot Waypoint is turned on, a waypoint will also be saved at the boat or cursor location when you take a screen snapshot. The waypoint is saved with the same file name as the screen snapshot.

**CAUTION!** On the microSD or SD card, you will see that a DAT (or a .TXT) file is created for every .PNG screen snapshot. This data file is required for viewing the screen snapshots from your control head, so don’t delete these files.

**Enable Screen Snapshot and Recording**

1. Install a microSD or SD card into the control head card slot. See *HELIX Control Head* for compatibility details.

**Enable Marking a Waypoint with each Screen Snapshot**

If Screen Snapshot Waypoint is turned on, a waypoint will also be saved at the boat or cursor location when you take a screen snapshot. The waypoint is saved with the same file name as the screen snapshot.

1. **Main Menu:** Press the MENU key twice. Select the Accessories tab.
2. Select Screen Snapshot Waypoint.
**Take Screen Snapshots**

**Screen Snapshots** are saved pictures of the view on the screen. The screen snapshot will include the menus, dialog boxes, warnings, and messages that were active when the screen snapshot was taken. If Screen Snapshot Waypoint is turned on, a waypoint will also be saved at the boat or cursor location when you take a screen snapshot.

![Waypoint S00079 Created]

**NOTE:** A microSD or SD card must be installed in the control head to use the Snapshot and Recording features. See **HELIX Control Head** for compatibility details.

1. From any view or cursor location you want to capture, press and hold the MARK key.
Manage Saved Screen Snapshots

Saved Screen Snapshots can be viewed from the Snapshot and Recording View. If Screen Snapshot Waypoint is turned on when the screen snapshot is taken, you can view the saved file from the Chart View.

**NOTE:** A microSD or SD card must be installed in the control head to use the Snapshot and Recording features. See **HELIX Control Head** for compatibility details.

Display a Saved Screen Snapshot from Snapshot and Recording View

1. Display the Snapshot and Recording View on-screen.
2. **Select a Snapshot:** Press the UP or DOWN Cursor keys to scroll through the saved files.
3. **Display:** Press the RIGHT Cursor key.
4. **Close:** Press the LEFT Cursor key.

---

**Screen Snapshot View**

- **Name:** S00077.PNG
- **Latitude:** N 34°14.410'
- **Longitude:** W 083°59.090'
- **Created:** 11:34:32 AM 06/14/08

**MicroSD or SD card storage (yellow = used space)**

---

**Scroll through the List**

**Display**
Display a Saved Screen Snapshot from Chart View

If Screen Snapshot Waypoint is turned on when the screen snapshot is taken, you can view the saved file from the Chart View [see Enable Marking a Waypoint with each Screen Snapshot].

1. Display a Chart View on-screen.
2. Select a Snapshot: Use the Cursor key to select a screen snapshot icon.
3. Display: Press the CHECK/INFO key.

Delete a Screen Snapshot

1. Display the Snapshot and Recording View on-screen.
2. Select a Snapshot: Press the UP or DOWN Cursor keys to scroll through the saved files.
3. Press the MENU key.
4. Select Delete Image. Press the RIGHT Cursor key.

Delete all Screen Snapshots

1. Display the Snapshot and Recording View on-screen.
2. Press the MENU key.
3. Select Delete All Images. Press the RIGHT Cursor key.
The Recording feature records active sonar information. When the recording is played back, the views that were active during the recording are available in Playback. You can play a saved recording from the Snapshot and Recording View.

**NOTE:** A microSD or SD card must be installed in the control head to use the Snapshot and Recording features. See HELIX Control Head for compatibility details.

### Start Recording
1. Display the Snapshot and Recording View on-screen.
2. Press the MENU key.
3. Select Start Recording. Press the RIGHT Cursor key.
   - **File Name:** A waypoint will also be created at the boat location, and the recording shares the same file name as the waypoint (.SON).
   - **Use Different Views:** To use different views on the control head and continue recording, press the EXIT key.
   - **Not Available:** Taking screen snapshots and playback mode are not available during recording.

### Adjust Pings Per Second
For maximum performance during recording, keep the Pings per Second setting on Auto. If there is limited memory on the installed microSD or SD card, use Pings Per Second to slow the ping rate. However, the recording will capture less sonar detail at a slower ping rate.

1. Display the Snapshot and Recording View on-screen.
2. Press the MENU key.
3. Select Pings Per Second.
4. Press the RIGHT or LEFT Cursor keys to adjust the setting.

### Stop Recording
1. **X-Press Menu:** From any view, press the MENU key once.
2. Select Stop Recording. Press the RIGHT Cursor key.
Play a Recording

1. Display the Snapshot and Recording View on-screen.
2. **Select a Recording**: Press the UP or DOWN Cursor keys to scroll through the saved files.
3. **Start Playback**: Press the RIGHT Cursor key.

   **Navigation** is cancelled during playback.

   **Use Different Views**: To use different views on the control head and continue playback, press the EXIT key.

   **Adjust Sonar**: Use the X-Press Menu to adjust sonar settings during playback. You can also use the cursor.

   **Mark Waypoints**: Press the MARK key to mark waypoints during playback.

---

**Selecting a Recording to Play**

![Screen Snapshot View](image)

- **Name**: R00005.SON
- **Current Ping**: 0 mS
- **Average Ping**: 58 mS
- **Remaining**: 2:18-13.5MB
- **Latitude**: N 34°13.412'
- **Longitude**: W 083°58.509'
- **Created**: 7:02:17 PM 12/31/-31

---

**Start Playback**
**Adjust Playback Speed**

1. **X-Press Menu**: From any view, press the MENU key once.
2. Select Playback Speed.
3. Press the RIGHT or LEFT keys to adjust playback speed or pause.

**Stop Playback**

1. **X-Press Menu**: From any view, press the MENU key once.
2. Select Stop Playback. Press the RIGHT Cursor key.

**Delete a Recording**

1. Display the Snapshot and Recording View on-screen.
2. **Select a Recording**: Press the UP or DOWN Cursor keys to scroll through the saved files.
3. Press the MENU key.
4. Select Delete Recording. Press the RIGHT Cursor key.

**Delete all Saved Recordings**

1. Display the Snapshot and Recording View on-screen.
2. Press the MENU key.
3. Select Delete All Recordings. Press the RIGHT Cursor key.
Email Files to Customer Service

If you’re working with Humminbird Customer Service to troubleshoot a sonar-related issue, they may ask you to send a screen snapshot or recording to them for review. Use the instructions in this section to email a saved screen snapshot or recording to Humminbird Customer Service. For more information, see humminbird.com.

Email a Saved Screen Snapshot

1. Install the SD or microSD card (and adapter) with the saved screen snapshots and recordings into your personal computer.

   **CAUTION!** On the microSD or SD card, you will see that a DAT (or a .TXT) file is created for every .PNG screen snapshot. This data file is required for viewing the screen snapshots from your control head, so don’t delete these files. See HELIX Control Head for compatibility details.

2. Open your email account and compose a new message.

   If Customer Service has provided a customer number, include it in the subject line.

3. Attach the screen snapshot files to the message. For each screen snapshot, attach the Sxxxxx.PNG file.

   **Folder:** Screen Snapshots are saved in the SNAPSHOT folder on the microSD or SD card.

   **File Names:** The .PNG file and .DAT file for each screen snapshot have the same name. Unless you have edited the name, screen snapshots start with S.

4. Repeat step 3 for each screen snapshot.

5. Send the email to Humminbird Customer Service.

   **NOTE:** If the attached files are large, you may need to use win-zip or a similar program to compress the files and send them via email.

Email a Saved Recording

1. Install the microSD or SD card adapter with the saved screen snapshots and recordings into your personal computer.

   **CAUTION!** On the microSD or SD card, you will see that a DAT [or a .TXT] file is created for every recording folder. This data file is required for viewing the recordings on your control head, so don’t delete these files. See HELIX Control Head for compatibility details.

2. Open your email account and compose a new message.

   If Customer Service has provided a service number, include it in the subject line.

3. Attach the Rxxxxx.DAT file for the recording to the message.

   **Folder:** Recordings are saved in the RECORD folder on the microSD or SD card.

4. Attach all the files in the Rxxxxx folder to the message. Open the RECORD folder, and open the folder with the Recording name.

   **Folder:** Recordings are saved in the RECORD folder on the microSD or SD card. Unless you have edited the name, recordings start with R. Open the Rxxxxx folder for the recording. For example, to send the files for the R00001 recording, open the R00001 folder.

   **File Names:** Attach all the .SON files and .IDX files in the recording folder.

5. Repeat step 3 and 4 for each recording.

6. Send the email to Humminbird Customer Service.

   **NOTE:** If the attached files are large, you may need to use win-zip or a similar program to compress the files and send them via email.
To enable the chart and navigation features, the control head must have a GPS Fix from an internal or external GPS receiver [see Getting Started to check the sensor reception]. Some of these features also require a compass/heading sensor to be connected to the control head.

The selected map source also influences the menu system. When you change the map source, the menu options for the chart views change, allowing you to add navigation data, shading, or alarms. See Select a Map Source for details.

When the boat is stationary, it is drawn as a circle.
When the boat is in motion, it changes to a boat shape, pointed in the direction of motion.
**DISPLAY A CHART VIEW ON-SCREEN**

There are a variety of views available to display charts and navigation. The views can be customized and displayed as a Combo View.

**Display a Chart View or Bird’s Eye View**

Bird’s Eye View is only available when Contour XD or a Navionics map card is selected as the map source.

1. Press and hold the VIEW key.
2. Select Chart > Chart View or Chart Instrument View.

   **OR**

   Select Chart > Bird’s Eye View.

---

For more information, see
*Customize the Chart Instrument View.*

For more information, see
*Customize the Bird’s Eye View.*
Display a Chart Combo View

You can select a variety of Chart Combo Views or Chart/Sonar Combo Views.

1. Press and hold the VIEW key.
2. Select Chart.
3. Select a view to display on-screen. Press the RIGHT Cursor key.

**Chart > Chart/Bird’s Eye Combo View** (with Contour XD or Navionics only)

For more information, see Customize the Bird’s Eye View.

**Chart > Chart/Chart Combo View** (Map Source: Contour XD)

**Chart > Chart/BE Instrument View** (with Contour XD or Navionics only)

For more information, see Customize the Chart Instrument View and Customize the Bird’s Eye View.

**Chart > Chart/Sonar Combo View** (Map Source: Contour XD)

For more information, see the Sonar section.

**Chart > Chart/Down Combo View** (Map Source: Contour XD)

For more information, see the Down Imaging section.

**Chart > Chart/Side Combo View** (Map Source: Contour XD)

For more information, see the Side Imaging section.

**Chart > Chart/Sonar/Down Combo View** (Map Source: Contour XD)

For more information, see the Sonar and Down Imaging sections.

**Chart > Chart/Sonar/Side Combo View** (Map Source: Contour XD)

For more information, see the Sonar and Side Imaging sections.

**Chart > Chart/Sonar/Down Combo View** (Map Source: Contour XD)

For more information, see the Sonar and Down Imaging sections.

**Chart Overview**
**Select a Map Source**

The HELIX control head includes built-in maps, including the Humminbird Basemap and Contour XD. You can also install a microSD or SD map card with additional chart information for a particular location (separate purchase required). See HELIX Control Head for compatibility details.

### Install a microSD or SD Map Card

When you install a microSD or SD map card, the control head automatically chooses the best map to display. You can also change the map source manually. If your control head has two cards installed, you can choose which map source you want to use (HELIX 8, 9, 10, 12 only).

1. Install a microSD or SD map card into the control head card slot. See HELIX Control Head for compatibility details.

   **NOTE:** Do not leave the card slot cover open. The slot cover should always be closed to prevent water damage to the unit.

### Change the Map Source

When you install a microSD or SD map card, the map source is changed automatically to match the microSD or SD map card map source. You can also change the map source manually.

When you change the map source, the available views and menus for the chart views also change, allowing you to add navigation data, shading, alarms, and more.

1. **Main Menu:** Press the MENU key twice. Select the **Chart** tab.
2. Select Map Source.
3. Select the installed map card location or a built-in map.
   - **Auto:** The best available map will be selected automatically.

### Change Map Options

#### Change the Map Coordinate System (optional, Contour XD and Navionics map cards only)

Use Map Datum to change the map coordinate system used by the control head to match those of a paper map. Almost all electronic charts use the WGS84 Map Datum and most likely do not require a setting change. (Default = WGS84)

1. **Main Menu [Advanced User Mode]:** Press the MENU key twice. Select the **Chart** tab.
2. Select Map Datum.
3. Press the RIGHT or LEFT Cursor keys to change the setting.
Apply an Offset to the Map (optional, Contour XD and Navionics map cards only)

Use Set Map Offset to move the chart position on-screen and correct a position error in the cartography. This setting applies to all charts, not just the chart that requires correction.

**NOTE:** This feature is not available with Humminbird LakeMaster map cards.

1. Display a Chart View on-screen.
2. Use the Cursor Control key to move the cursor to the position where the map offset will be applied.
3. **Main Menu [Advanced User Mode]:** Press the MENU key twice. Select the Chart tab.
4. Select Set Map Offset.
5. Press the RIGHT Cursor key.
6. Follow the on-screen prompts.

**Clear Map Offset:** Select Main Menu [Advanced User Mode] > Chart tab > Clear Map Offset.

Select a New Map (optional, Contour XD and Navionics map cards only)

If the installed map card includes additional maps, use the following instructions to display map borders and select a different map.

1. **Main Menu:** Press the MENU key twice. Select the Chart tab.
2. Select Map Borders.
3. Select MMC/SD Only or All Visible.
4. Display a Chart View on-screen.
5. Use the Cursor Control key to move the cursor within the dotted lines of a map border.
6. Press the +ZOOM key repeatedly to display the map details.

See Customize the Chart View: Customize the Chart Detail Level.

Change the Simulation Position (optional)

Simulator mode allows you to save menu settings and navigation data while you learn to use your control head. To start simulation mode, see Getting Started. To change the simulation position shown on the Chart View, use the following instructions.

Simulation mode is not intended for on the water use. If you are on the water, use Normal mode. See Getting Started for details.

1. Display a Chart View on-screen.
2. Use the Cursor Control key to move the cursor to a position on the view.
3. **Main Menu [Advanced User Mode]:** Press the MENU key twice. Select the Chart tab.
4. Select Set Simulation Position.
5. Press the RIGHT Cursor key.

The boat icon will move to the new position.

**Clear the Track:** Press the MENU key once. Select Clear Current Track.
Set up Humminbird ChartSelect

ChartSelect allows you to purchase a Humminbird chart online and download it to a blank microSD or SD Card. Visit chartselect.humminbird.com for more information and to download the ChartSelect and FishSmart User Guide.

To display purchased ChartSelect charts and/or overlays, see Display Chart Overlays.

Encrypt a microSD or SD Card

Use the Encrypt SD Card menu to prepare a blank microSD or SD card for ChartSelect. See HELIX Control Head for compatibility details.

⚠️ WARNING! Do not use this menu with a microSD or SD map card installed. You must use a blank microSD or SD card with this menu. See the ChartSelect and FishSmart User Guide before proceeding.

1. Main Menu: Press the MENU key twice. Select the Setup tab.
2. Select Encrypt SD Card.
3. Press the RIGHT Cursor key.
**Set up Humminbird LakeMaster**

When a Humminbird LakeMaster map card is installed and selected as the map source, additional menus are added to the menu system. The menu options are determined by the map card you purchased.

**Compatible Map Sources:** Humminbird LakeMaster, LakeMaster PLUS, ZeroLine Map Card, AUTOCHART PC, etc. Visit our Web site at humminbird.com for compatibility details and updates.

NOTE: A Humminbird LakeMaster map card must be installed and selected as the map source to enable this feature [see Change the Map Source].

To display purchased ChartSelect charts and/or overlays, see *Display Chart Overlays*.

**Set the Water Level Offset**

When you start your trip for the day, it is important to note if the water level is higher or lower than normal. For example, if you know the lake is down 3 feet, set the Water Level Offset to -3.

1. **Main Menu:** Press the MENU key twice. Select the HB Chart tab.
2. Select Water Level Offset.
3. Press the RIGHT or LEFT Cursor keys to adjust the setting.

   - **If the water level is higher than normal,** set a (+) positive amount.
   - **If the water level is lower than normal,** set a (-) negative amount.
   - **If the water level has not changed (normal),** set Water Level Offset to (0) zero.

**NOTE:** For additional LakeMaster map card menus, see *Display Humminbird LakeMaster Contour Lines and Depth Ranges* in this manual. For additional features related to your LakeMaster map card, visit our Web site at humminbird.com to download the accessory guide.
**Set up Navionics**

When a Navionics map card is installed and selected as the map source, additional menus are added to the menu system. The menu options are determined by the map card you purchased, and they are available in the Chart tab [see *Customize the Chart View*] and/or the Platinum tab.

**Compatible Map Sources:** Navionics+, Navionics Gold, HotMaps, HotMaps Premium, and Platinum+. Visit our Web site at [humminbird.com](http://humminbird.com) for compatibility details and updates.

### Selecting the Navionics Platinum Tab

![Selecting the Navionics Platinum Tab](image)

**NOTE:** A Navionics map card must be installed and selected as the map source to enable these features [see *Change the Map Source*]. For details and additional features related to your Navionics map card, see your Navionics map card user guide.
Nav aids on Bird’s Eye View allows you to add navigational aids to the Bird’s Eye View, such as lights or buoys. The available settings are determined by the installed map card and the selected map source.

**Show/Hide Nav aids**

1. **Main Menu:** Press the MENU key twice. Select the Chart tab.
2. Select Nav aids on Bird’s Eye View.
3. Select Visible or Hidden.

**Show/Hide the Bird’s Eye Outline**

If you use the Chart/Bird’s Eye View, you can display a line on the Chart View that shows the portion of the view that is used in the Bird’s Eye View.

1. **Main Menu:** Press the MENU key twice. Select the Nav tab.
2. Select 3D View Outline.
3. Select Visible or Hidden.
**Customize the Chart Instrument View**

The Chart Instrument View displays a digital compass and XTE (Cross Track Error) graphic on the Chart View. If a compass is not installed, the COG (Course Over Ground) provides the data source for the digital compass.

The Chart Instrument View shares the same menu settings as the Chart View. For customization information, see *Customize the Chart View*.

---

**Chart Instrument View**

- **Digital Compass**: COG or connected compass
- **North Up Indicator**: N-up
- **Map Scale**: 1000ft
- **Cursor**: Digital Readouts
- **Digital Readouts Set to Overlay**: 29.5ft, 5.6mph, 319°t
- **Distance**: 3.38nm
- **Bearing**: 319°t

**NOTE:** Digital readouts can be displayed as an overlay, or they can be displayed in data boxes (see *Views: Display Digital Readouts*).
CUSTOMIZE THE CHART VIEW

The settings in this section are optional. You can use the default settings for the chart appearance and map source, or you can customize the Chart View.

NOTE: Digital readouts can be displayed as an overlay, or they can be displayed in data boxes [see Views: Display Digital Readouts].

Change the Background Color

The Background menu changes the color of the background on the view. This menu also changes the background color for the Bird’s Eye View.

1. Press the POWER key.
2. Select Background.
3. Select a color.

Show/Hide the North Up Indicator Icon

The North Up Indicator displays the direction of True North. The icon also displays the chart orientation, and it will change as the orientation and the data source change. To set the Chart Orientation, see Change the Chart Orientation and Motion Mode.

1. Main Menu: Press the MENU key twice. Select the Nav tab.
2. Select North Up Indicator.
3. Select Off [hidden] or On [visible].
**Show/Hide the Course Projection Line**

The course projection line is an arrow or line extending from the bow of the boat icon. It projects the current course and shows where the boat will go if you continue on your present course.

1. **Main Menu:** Press the MENU key twice. Select the **Nav** tab.
2. Select Course Projection Line.
3. Select a display setting.

<table>
<thead>
<tr>
<th>Display Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hidden</td>
<td>The Course Projection line will not be displayed.</td>
</tr>
<tr>
<td>Standard</td>
<td>arrow</td>
</tr>
<tr>
<td>Single Vector</td>
<td>line</td>
</tr>
<tr>
<td>COG/SOG</td>
<td>A line with tick marks will be displayed at set intervals from the boat. The tick marks are based on the speed calculation.</td>
</tr>
</tbody>
</table>

**Show/Hide Latitude/Longitude Lines**

Use the following instructions to show or hide latitude and longitude lines on the Chart View.

1. **Main Menu:** Press the MENU key twice. Select the **Chart** tab.
2. Select Lat/Lon Grid.
3. Select Visible or Hidden.

**Adjust the Depth Shading**

Shaded Depth allows you to change the depth used for shading on the Chart View. The available settings are determined by the installed map card and selected map source.

1. **Main Menu:** Press the MENU key twice. Select the **Chart** tab.
2. Select Shaded Depth.
3. Press the RIGHT or LEFT Cursor keys to adjust the setting.
Customize the Chart Detail Level

Use the following instructions to add or hide chart details and navaids on the Chart View and the Bird’s Eye View.

### Select a Chart Detail Level

Chart Detail Level allows you to add details and layers to the chart views. The available settings are determined by the installed map card and selected map source.

1. **Main Menu**: Press the MENU key twice. Select the Chart tab.
2. Select Chart Detail Level.
3. Press the RIGHT or LEFT Cursor keys to select one of the following:

<table>
<thead>
<tr>
<th>Level</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Basic</td>
<td>shows land areas, ports, obstructions, and restricted areas</td>
</tr>
<tr>
<td>Navigation</td>
<td>In addition to the Basic level, Navigation shows navaids, landmarks, ferryways, and navigation routes.</td>
</tr>
<tr>
<td>Underwater</td>
<td>In addition to the Basic and Navigation information, Underwater shows depth contours, fishing areas, underwater wrecks, tides, and currents.</td>
</tr>
<tr>
<td>Custom [Advanced User Mode]</td>
<td>Select Custom to select specific chart detail layers. You can show or hide chart layers such as navigation canals, boundaries, restricted areas, coastline, bridges, and more. See Select Custom Chart Layers.</td>
</tr>
</tbody>
</table>
Select Custom Chart Layers
1. **Main Menu (Advanced User Mode):** Press the MENU key twice. Select the Chart tab.
2. Select Chart Detail Level.
3. Select Custom.
4. Press the DOWN Cursor key.
5. Select Custom Chart Layers. Press the RIGHT Cursor key.
6. Use the Cursor key to select a layer and turn it on [visible] or off [hidden].

Simplify the Chart Detail Level
Use Chart Declutter to remove all chart layers except for land outlines, waypoints, routes, and tracks. The chart will clear for 10 seconds, and then it will refresh to its previous display settings.

1. **Chart X-Press Menu:** With a Chart View displayed on-screen, press the MENU key once.
2. Select Chart Declutter.
3. Press the RIGHT Cursor key.

Show/Hide Map Borders
The dotted lines of a map border indicate an area that contains a different map. See *Select a Map Source: Select a New Map* for details. The available settings are determined by the installed map card and selected map source.

1. **Main Menu:** Press the MENU key twice. Select the Chart tab.
2. Select Map Borders.
3. Select Hidden, MMC/SD only, or All Visible.

Show/Hide Spot Soundings
Spot Soundings are depth measurements shown on the chart. The available settings are determined by the installed map card and selected map source.

1. **Main Menu:** Press the MENU key twice. Select the Chart tab.
2. Select Spot Soundings.
3. Select Visible or Hidden.

Increase the Text Size
Turn on Easy View Text to increase the size of the text displayed on the chart view. The available settings are determined by the installed map card and selected map source.

1. **Main Menu:** Press the MENU key twice. Select the Chart tab.
2. Select Easy View Text.
3. Select On or Off.
If you purchased a Humminbird LakeMaster PLUS map card or ChartSelect lake maps (that are saved to an encrypted SD card), you can select a base layer and add overlays to the Chart View to add more detail to your map.

The available settings are determined by the installed map card and selected map source. The LakeMaster map card or SD card with ChartSelect chart layers must be selected as the map source. See Select a Map Source: Select a New Map for details.

**NOTE:** Overlays cannot be used when Humminbird Basemap or ContourXD is selected as the map source.

### Display/Hide a Base Layer

Use the following instructions to change the Base Layer for the Chart View. The selected Base Layer will also be applied to the left window of the Chart/Chart Combo View and the Chart window in Chart Combo Views.

1. **Main Menu:** Press the MENU key twice. Select the HB Chart tab.
2. Select Base Layer. Press the RIGHT Cursor key.
3. Select 2D Map or Aerial.
   
   To remove the selected Base Layer, select Base/Overlay Reset.

### Display/Hide Overlays

Use the following instructions to select a chart overlay for the Chart View. The selected Base Layer will also be applied to the left window of the Chart/Chart Combo View and the Chart window in Chart Combo Views.

1. **Main Menu:** Press the MENU key twice. Select the HB Chart tab.
2. Select Overlay Options. Press the RIGHT Cursor key.
3. Select Map Overlay.
4. Select 2D Map or Aerial.
   
   To remove the selected overlay, select Off.

### Adjust the Overlay Transparency

Use the following instructions to adjust the transparency of the displayed overlay.

1. **Main Menu:** Press the MENU key twice. Select the HB Chart tab.
2. Select Overlay Options.
3. Select Overlay Transparency.
Chart/Chart Combo View with Base Layer (set to 2D) and Overlay (set to Aerial)

The selected Base Layer will be applied to the left window.
When you install a LakeMaster Map Card or LakeMaster PLUS Map Card, menu options are added to the HB Chart Menu tab. You can display or hide contour lines, highlight shallow water, and highlight a depth range on the map.

**NOTE:** A Humminbird LakeMaster map card must be installed and selected as the map source to enable these features. For details and additional features related to your LakeMaster map card, visit our Web site at humminbird.com to download the accessory guide.

---

**Adjusting the LakeMaster Display Settings**

- **Depth highlight & depth highlight range** (green)
- **Shallow water highlight** (red)
- **Contour line**
- **Depth label** (depth of contour)
- **Depth colors**

---

See More of Contour Lines and Depth Colors
**Show/Hide Contour Lines**
Display or hide the water contour lines in the Chart View. This feature is also affected by the Water Level Offset setting. See *Select a Map Source: Set up Humminbird LakeMaster.*

1. **Main Menu:** Press the MENU key twice. Select the **HB Chart** tab.
2. Select Contour Lines.
3. Select Hidden or Visible.

**Turn on Depth Colors**
Set the depth shading in the Chart View to Off or shaded.

1. **Main Menu:** Press the MENU key twice. Select the **HB Chart** tab.
2. Select Depth Colors.
3. Press the RIGHT or LEFT Cursor keys to adjust the setting.

**Highlight a Depth Range**
Depth Highlight allows you to identify a depth in the Chart View. You can also adjust the range on each side of the depth using Depth Highlight Range. The depth range you set is highlighted in green on the chart.

For example, if you know a certain fish is holding at 18 to 20 feet, you can set the Depth Highlight to 19 feet and the Depth Highlight Range to +/- 1 foot. The view will show a green band from 18 to 20 feet.

1. **Main Menu:** Press the MENU key twice. Select the **HB Chart** tab.
2. Select Depth Highlight.
3. Press the RIGHT or LEFT Cursor keys to select a depth.
4. To highlight the range on both sides of the selected depth, press the DOWN Cursor key. Select Depth Highlight Range.
5. Press the RIGHT or LEFT Cursor keys to select a range.

**Highlight a Shallow Water Range**
When the depth is equal to or less than the amount you set, it will be highlighted in red on the Chart View.

For example, if your boat has a draft of 3 feet, set the Shallow Water Highlight to 3 feet, and a red band from 0 to 3 feet will be shown on the map.

1. **Main Menu:** Press the MENU key twice. Select the **HB Chart** tab.
2. Select Shallow Water Highlight.
3. Press the RIGHT or LEFT Cursor keys to select a depth.
CHANGE THE CHART ORIENTATION AND MOTION MODE

The Chart View pans automatically so the boat is always centered on the view. The settings in this section allow you to change the chart orientation, zoom the view automatically, set the north reference, and see more or less of the view based on the speed or range setting.

Set the Chart Orientation

Set the Chart Orientation

1. **Main Menu:** Press the MENU key twice. Select the Nav tab.
2. Select Chart Orientation.
3. Select an orientation to apply to the chart.

<table>
<thead>
<tr>
<th>Orientation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>North-Up</td>
<td>The chart is oriented with North up on the display, and the boat rotates according to its heading or COG (Course Over Ground).</td>
</tr>
<tr>
<td>Head-Up</td>
<td>The boat’s current heading points up, and the chart rotates around the boat icon so that it always points up on the view. The heading is provided by the connected compass/heading sensor. If a compass is not connected, the boat will be oriented according to COG (Course Over Ground).</td>
</tr>
<tr>
<td>Course-up</td>
<td>During navigation, the intended course or route leg is shown at the top of the view. Objects ahead of the boat are drawn above the boat. When the boat is not navigating, the current heading is displayed.</td>
</tr>
</tbody>
</table>

**NOTE:** The North Up Indicator will change as the orientation and data source change. To display the North Up Indicator, see Customize the Chart View.
**Set the Bearing North Reference**

North Reference allows you to have the bearing displayed as True North or Magnetic North.

1. **Main Menu**: Press the MENU key twice. Select the Nav tab.
2. Select North Reference.
3. Select True North or Magnetic North.

**Turn on/off Auto Zoom**

Turn on Auto Zoom to zoom the Chart View automatically based on the speed of the boat. As the boat’s speed increases, the chart range will increase.

![NOTE: The settings in this section do not apply to the Bird’s Eye View.]

1. **Main Menu (Advanced User Mode)**: Press the MENU key twice. Select the Chart tab.
2. Select Auto Zoom.
3. Select On or Off.

**Zoom In/Out**: If Auto Zoom is turned on, you can press the +/- ZOOM keys to see more or less of the view, and Auto Zoom will resume after 20 seconds. To use only the +/- ZOOM keys to adjust the chart range, turn off Auto Zoom.

**Turn on/off Auto Range**

Turn on Auto Range to set the chart scale to the lowest range so that only the boat icon and the next waypoint in the route are shown. If Auto Range is turned on, Auto Zoom will be turned off.

![NOTE: The settings in this section do not apply to the Bird’s Eye View.]

1. **Main Menu (Advanced User Mode)**: Press the MENU key twice. Select the Chart tab.
2. Select Auto Range.
3. Select On or Off.

**Zoom In/Out**: If Auto Range is turned on, you can press the +/- ZOOM keys to see more or less of the view, and Auto Range will pause. To resume using Auto Range, press and hold the +/- ZOOM keys.

**Turn on Vessel Offset**

Vessel Offset allows you to see more of the Chart View based on the speed of the boat. Vessel Offset works with Offset Speed. When the boat is moving below the Offset Speed setting, the boat icon will be displayed in the center of the view. When the boat is moving at or above the Offset Speed setting, the boat icon will move to the edge of the view so more of the Chart View is shown.

1. **Main Menu (Advanced User Mode)**: Press the MENU key twice. Select the Chart tab.
2. Select Vessel Offset.
4. Select Offset Speed.
5. Press the RIGHT or LEFT Cursor keys to adjust the setting.
NAVIGATION OVERVIEW

Your Humminbird control head allows you to mark waypoints, create a route, and start navigating. Waypoints, routes, and tracks can be managed on-screen so you can save your favorites, edit names, and easily return to your favorite destinations.

There are many ways to start navigation or edit navigation data with your Humminbird control head. The instructions in this section review navigation features on the chart views. To use navigation features from the Waypoint Management dialog box, see Manage your Navigation Data.

Moving the Cursor and Zooming in Chart View

When the boat is stationary, it is drawn as a circle.
When the boat is in motion, it changes to a boat shape, pointed in the direction of motion.
Shifting the Eye Point and Zooming in Bird’s Eye View

Move the Eye Point

Navigation Overview
**Navigation Alarms Overview**

When an alarm is turned on, an alert will sound or display on the control head to indicate the threshold has been exceeded. When you set the Off Course Alarm, Arrival Alarm, and Drift Alarm, the limits are shown on the Chart View.

**Turn on Alarms and Adjust Settings**

1. **Main Menu:** Press the MENU key twice. Select the Alarms tab.
2. Select an alarm menu. Press the RIGHT or LEFT Cursor keys to adjust the threshold.

<table>
<thead>
<tr>
<th>Alarm Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off Course Alarm</td>
<td>Sets how far the boat can move off course during navigation before an alarm will be triggered. GPS required.</td>
</tr>
<tr>
<td>Arrival Alarm</td>
<td>Sets how close the boat must be to the destination waypoint before the alarm will be triggered. GPS required.</td>
</tr>
<tr>
<td>Drift Alarm</td>
<td>Sets how far the boat can move from its anchored position outside the drift alarm perimeter before an alarm will be triggered. GPS required.</td>
</tr>
</tbody>
</table>
MAN OVERBOARD (MOB) NAVIGATION

As soon as you know that you have a man overboard (MOB), activate Man Overboard navigation to maximize the chances for a successful rescue. Man Overboard navigation marks the approximate point where the person went overboard and starts continuous navigation toward the Man Overboard waypoint.

Activate Man Overboard Navigation

1. Press and hold the GOTO/MOB key until Man Overboard Navigation is activated.
When Man Overboard is activated, any current navigation will be cancelled and the current route will be discarded without notification. Man Overboard navigation will begin immediately, and you will see the following on the screen:

**Chart View:** The view will switch to Chart View automatically.

**Man Overboard Waypoint:** A waypoint is created at the boat’s current position, regardless of whether the chart cursor is active or not.

**Continuous Navigation:** The control head will start continuous navigation toward the Man Overboard waypoint.

**Auto Zoom:** The screen magnifies to show the Man Overboard waypoint and the boat on the screen.

### Cancel Man Overboard Navigation

1. Press the MENU key.
2. Select Cancel MOB Navigation.
Waypoints are saved latitude/longitude positions. They mark a position of interest such as your favorite fishing area, structure, or marker buoy. The control head saves the position and allows you to edit the waypoint name, icon, and more (see Manage your Navigation Data). You can save 2,750 waypoints to the control head.

### Customize Waypoint Display Settings

You can use the waypoint settings provided by your control head, or you can customize the waypoints shown on the view. You can also edit waypoints from the Chart View or from the Waypoint Management dialog box (see Manage your Navigation Data).

### Change New Waypoint Settings

You can customize waypoint settings for all new waypoints. To edit waypoints after they’ve been marked, see Edit a Waypoint in the Chart View or Manage your Navigation Data.

1. **Main Menu**: Press the MENU key twice. Select the **Nav** tab.
2. **Select Waypoint Settings**. Press the RIGHT Cursor key.
3. Use the Cursor Control key to set the following:

<table>
<thead>
<tr>
<th>Icon Category</th>
<th>Select a category to assign to new waypoints [All, Geometry, Alerts, Supplies, Navigation, etc.]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Default Waypoint Icon</td>
<td>Select an icon for all new waypoints. To see the most icon options, set the Icon Category to All.</td>
</tr>
<tr>
<td>New Waypoint Icon</td>
<td>Select <strong>Default</strong>, and the system will apply your settings to new waypoints. If you choose <strong>Select</strong>, each time you mark a waypoint (see Mark Waypoints), you can change the waypoint icon and category. See <strong>Mark and Edit Waypoints (on-the-go)</strong> in this section for details.</td>
</tr>
</tbody>
</table>

4. **Save**: Select Save. Press the RIGHT Cursor key.

### Show/Hide Casting Rings

Use Casting Rings to display a circle at a set distance around each waypoint in the Chart View. Casting rings are not applied to decluttered waypoints (see Declutter Waypoints).

1. **Main Menu**: Press the MENU key twice. Select the **Nav** tab.
2. **Select Casting Rings**.
3. Use the RIGHT or LEFT Cursor keys to set how far the casting rings will be displayed from the waypoints.
   - **Hide**: Select Off to hide the casting rings.
**Show/Hide Waypoint Proximity Flags**

Waypoint flags show the distance from the boat (or active cursor) to each waypoint. If set to visible, the waypoint flags for the ten closest waypoints to the boat or cursor will be shown on the Chart View.

1. **Main Menu [Advanced User Mode]**: Press the MENU key twice. Select the **Nav** tab.
2. Select Waypoint Proximity Flags.
3. Select Hidden or Visible.

**NOTE:** Waypoint Proximity Flags are also influenced by the zoom level and boat speed. The flags are displayed if the chart range is less than .5 sm and the boat is traveling less than 15 mph.

**Declutter Waypoints**

Use Waypoint Decluttering to control how the waypoint icon and name are displayed.

1. **Main Menu [Advanced User Mode]**: Press the MENU key twice. Select the **Nav** tab.
2. Select Waypoint Decluttering.
3. Select On or Off.

<table>
<thead>
<tr>
<th>On</th>
<th>If waypoints are displayed close together, the names will be shortened, and the icons will be displayed as small black icons. To see a decluttered waypoint at full size, select it with the cursor, or press the +ZOOM key repeatedly.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td>Waypoint names and icons will be displayed at regular size.</td>
</tr>
</tbody>
</table>

**NOTE:** To increase the text size, see *Customize the Chart View: Increase the Text Size.*
Mark Waypoints

Waypoints can be marked at the boat position or cursor position. To edit the waypoint, see *Edit a Waypoint in the Chart View* or *Manage your Navigation Data*.

Mark a Waypoint at the Boat Position

1. Press the MARK key.

Mark a Waypoint at the Cursor Position

1. Use the Cursor Control key to move the cursor to a position on the chart.
2. Press the MARK key twice.
Select a Waypoint in the Chart View

You can select a saved waypoint using the menu system or using the cursor on the Chart View.

Select a Saved Waypoint on the Chart View

1. Use the Cursor Control key to move the cursor to a waypoint on the Chart View.
   - **Edit**: Press the MENU key. Select the waypoint from the menu. Press the RIGHT Cursor key. Select Edit.
   - **More Info**: Press the CHECK/INFO key.
   - **Start Navigation**: Press the GOTO key twice.

2. **Exit Cursor**: Press the EXIT key.

Select the Last Saved Waypoint

1. Press the MENU key.
2. Select the waypoint name from the X-Press Menu.
3. Press the RIGHT Cursor key.
4. Select a menu from the waypoint menu.

Search and Select a Saved Waypoint

Use these instructions to search quickly for a waypoint, which is helpful if you cannot locate it on the Chart View.

1. **Chart X-Press Menu**: With a Chart View displayed on-screen, press the MENU key once.
2. Select Cursor to Waypoint. Press the RIGHT Cursor key.
3. Use the Cursor Control key to sort the list.
4. Select the waypoint name from the menu. Press the RIGHT Cursor key.
5. Press the EXIT key once.
6. The cursor will select the waypoint on the Chart View.
   - **Edit**: Press the MENU key. Select the waypoint from the menu. Press the RIGHT Cursor key. Select Edit.
   - **More Info**: Press the CHECK/INFO key.
   - **Start Navigation**: Press the GOTO key twice.
**Edit a Waypoint**

You can edit a waypoint as you mark it or after it is saved. The instructions in this section show you how to edit a waypoint in the Chart View. To edit a waypoint or a group of waypoints from the Waypoint Management dialog box, see *Manage your Navigation Data*.

**Mark and Edit Waypoints (on-the-go)**

Use the instructions in this section to edit a waypoint as soon as you mark it.

1. **Setup:** See *Change New Waypoint Settings*. Set the New Waypoint Icon menu to *Select*.
2. Press the MARK key.

   **OR**

   Use the Cursor Control key to move the cursor to a position. Press the MARK key twice.
3. **Edit:** When you mark a waypoint, the Waypoint Settings menu will display so you can edit the waypoint.

   **No Changes:** To proceed without making changes, press the MARK key (again).

**Edit a Waypoint in the Chart View**

Use these instructions to edit a waypoint from the Chart View. You can also edit waypoints in the Waypoint Management dialog box (see *Manage your Navigation Data*).

1. Use the Cursor Control key to move the cursor to a waypoint on the Chart View.
2. Press the MENU key.
3. Select the waypoint name from the X-Press Menu. Press the RIGHT Cursor key.
4. Select Edit. Press the RIGHT Cursor key.
5. Use the Edit Waypoint menu to edit the waypoint name, icon, and more (see *Manage your Navigation Data* for more information).
6. **Save**: Select Save. Press the RIGHT Cursor key.
7. **Close**: Press the EXIT key.

**Change the Waypoint Position in the Chart View**

1. Use the Cursor Control key to move the cursor to a waypoint on the Chart View.
2. Press the MENU key.
3. Select the waypoint name from the X-Press Menu. Press the RIGHT Cursor key.
4. Select Edit. Press the RIGHT Cursor key.
5. Select the latitude position. Press the RIGHT Cursor key.
6. Use the Cursor Control key to enter a new position.
7. **Save**: Press the CHECK/INFO key.
8. Repeat steps 5 through 7 to change the longitude position.
9. **Close**: Press the EXIT key.
10. **Save**: Select Save. Press the RIGHT Cursor key.

**Show/Hide a Waypoint Target**

Use the instructions in this section to display a target around a selected waypoint.

**Display a Target**

1. Use the Cursor Control key to move the cursor to a waypoint on the Chart View.
2. Press the MENU key.
3. Select the waypoint name from the X-Press Menu. Press the RIGHT Cursor key.
4. Select Target. Press the RIGHT Cursor key.
Remove a Target
1. **Chart X-Press Menu:** With a Chart View displayed on-screen, press the MENU key once.

2. Select Remove Target. Press the RIGHT Cursor key.

**Show/Hide a Waypoint Trolling Grid**

Use the instructions in this section to display a trolling grid on a selected waypoint.

**Display a Trolling Grid**
1. Use the Cursor Control key to move the cursor to a waypoint on the Chart View.

2. Press the MENU key.

3. Select the waypoint name from the X-Press menu. Press the RIGHT Cursor key.

4. Select Grid. Press the RIGHT Cursor key.

**Adjust the Trolling Grid Rotation**
1. **Main Menu:** Press the MENU key twice. Select the **Nav** tab.

2. Select Trolling Grid Rotation.

3. Press the RIGHT or LEFT Cursor keys to adjust the setting.

**Remove a Trolling Grid**
1. **Chart X-Press Menu:** With a Chart View displayed on-screen, press the MENU key once.

2. Select Remove Grid. Press the RIGHT Cursor key.
Delete a Waypoint in the Chart View

Use the following instructions to select a waypoint and delete it.

1. Use the Cursor Control key to move the cursor to a waypoint on the Chart View.
2. Press the MENU key.
3. Select the waypoint name from the X-Press Menu. Press the RIGHT Cursor key.
4. Select Delete. Press the RIGHT Cursor key.

Navigate to a Waypoint or Position

1. Use the Cursor Control key to move the cursor to a waypoint or position on the chart.
2. Press the GOTO key twice.

**NOTE:** If you are starting navigation to the cursor position, a waypoint will be marked when you press the GOTO key.
**Navigate to a Saved Position**

If you press the GOTO key, you can choose to start navigation from a list of saved waypoints and routes.

1. Press the GOTO key.
2. Select Nav Data. Press the RIGHT Cursor key.
3. Use the Cursor Control key to select a saved waypoint or route.
4. Press the RIGHT Cursor key to start navigation.

**Navigate Continuously Around a Waypoint**

Continuous Navigation Mode allows you to continue to navigate and fish around a selected waypoint, even if you pass over it multiple times.

1. **Main Menu**: Press the MENU key twice. Select the **Nav** tab.
2. Select Continuous Navigation Mode.
4. Press the EXIT key repeatedly until the menu system is closed.
5. Use the Cursor Control key to move the cursor to a waypoint.
6. Press the GOTO key twice.
**Routes**

Routes link two or more waypoints together to create a path for navigation. A route represents your intended navigation and shows the shortest path from each data point to the next. The distance between each waypoint is a route leg. You can save 47 routes (with 50 waypoints each) to the control head.

⚠️ **WARNING!** You should always be aware of your surroundings and watch for any potential obstacles.

**Create a Route and Start Navigation**

Use the instructions in this section to connect waypoints and start navigation immediately. To create a route from the Waypoint Management dialog box, see *Manage your Navigation Data*.

1. Use the Cursor Control key to move the cursor to a waypoint or position on the chart.
2. Press the GOTO key twice.
3. Repeat steps 1 and 2 to add more waypoints to the route.

---

**Creating and Navigating a Route**

![Waypoint WP100006 already in the current route](image.png)

- **1st waypoint**
- **2nd waypoint**
- **2nd route leg**
- **current track**
- **course projection line**
- **chart orientation**
- **north up indicator**
- **route start point**

**Move the Cursor**

**Press Twice to Start Navigation**
Save the Current Route

A route must have at least two waypoints to be saved as a route.

1. **Chart X-Press Menu:** With a Chart View displayed on-screen, press the MENU key once.
2. Select Save Current Route. Press the RIGHT Cursor key.
3. Follow the on-screen prompts to save or discard the route.

Change the Route During Navigation

The X-Press Menu allows you to make changes to the route while you are navigating it.

**Skipping a Waypoint During Navigation**

![Skipping a Waypoint During Navigation](image)

**Skip a Waypoint**

1. **Chart X-Press Menu:** With a Chart View or Bird’s Eye View displayed on-screen, press the GOTO key once.
2. Select Skip Next Waypoint.
3. Press the RIGHT Cursor key.

**Change the Route Order**

The route must be saved before you can change the travel order (see *Save the Current Route*).

1. **Chart X-Press Menu:** With a Chart View or Bird’s Eye View displayed on-screen, press the MENU key once.
2. Select the route name. Press the RIGHT Cursor key.
3. Select Travel Forward or Travel Reverse.
4. Press the RIGHT Cursor key.
**Reset XTE (Cross Track Error)**

Use Reset XTE to recalculate the cross track error (XTE) from the boat’s current position to the next waypoint in the route.

For example, if you’ve deviated from a route to navigate around an island, select Reset XTE to update the control head’s course calculations from the current boat position instead of from the previous waypoint in the route.

1. **Chart X-Press Menu:** With a Chart View or Bird’s Eye View displayed on-screen, press the GOTO key once.
2. Select Reset XTE.
3. Press the RIGHT Cursor key.

**Cancel Navigation**

1. **Chart X-Press Menu:** With a Chart View displayed on-screen, press the MENU key once.
3. Follow the on-screen prompts to cancel navigation and save the route.

**Start Navigation on a Saved Route**

Use the cursor to select a waypoint in a saved route, and you can start navigation to it. You can also choose the order of navigation.

**Start Navigation on a Saved Route**

1. Use the Cursor Control key to move the cursor to a waypoint on a route.
   - If you select the first waypoint in the route, the route will turn red.
2. Press the GOTO key.
3. Select a travel order.

<table>
<thead>
<tr>
<th>Go To Point</th>
<th>Start navigation to the selected waypoint only.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Forward from Point</td>
<td>Start navigation to the selected waypoint and continue traveling the route forward from there.</td>
</tr>
<tr>
<td>Reverse from Point</td>
<td>Start navigation to the selected waypoint and travel the route in reverse from there.</td>
</tr>
<tr>
<td>Travel Forward</td>
<td>Start navigation to the first waypoint in the route and continue traveling the route forward from there.</td>
</tr>
<tr>
<td>Travel Reverse</td>
<td>Start navigation to the last waypoint in the route and travel the route in reverse from there.</td>
</tr>
</tbody>
</table>
Navigate to a Saved Position

If you press the GOTO key, you can choose to start navigation from a list of saved waypoints and routes.

1. Press the GOTO key.
2. Select Nav Data. Press the RIGHT Cursor key.
3. Use the Cursor Control key to select a saved waypoint or route.
4. Press the RIGHT Cursor key to start navigation.
Edit a Saved Route

You can edit the route name and display it or hide it on the Chart View. To edit routes from the Waypoint Management dialog box, see Manage your Navigation Data.

1. Use the Cursor Control key to move the cursor to a waypoint on the route. Press the MENU key.
   OR
   If the route was saved recently, you don’t have to select it first. Press the MENU key.
2. Select the route name from the X-Press Menu. Press the RIGHT Cursor key.
3. Select Edit. Press the RIGHT Cursor key.
4. Use the Cursor Control key to change the route name.
   Visibility: Select Visible or Hidden.
5. Save: Select Save. Press the RIGHT Cursor key.

Delete a Saved Route

You can delete a route from the Chart View or the Waypoint Management dialog box. To delete a route from the Waypoint Management dialog box, see Manage your Navigation Data.

1. Use the Cursor Control key to move the cursor to a waypoint on the route. Press the MENU key.
   OR
   If the route was saved recently, you don’t have to select it first. Press the MENU key.
2. Select the route name from the X-Press Menu. Press the RIGHT Cursor key.
3. Select Delete. Press the RIGHT Cursor key.
4. Follow the on-screen prompts to delete the route.
A track is a collection of track points that contains the boat’s detailed position history at set intervals. The Current Track shows the position history since the control head was powered on. You can clear the Current Track or save it at any time. To change the track point interval, edit saved tracks, and create track settings, see *Manage your Navigation Data*. You can save 50 tracks (each with 20,000 track points) to the control head.

**Change New Track Settings**

You can use the track settings provided by your control head, or you can customize the tracks shown on the view. You can also edit tracks from the Chart View or from the Waypoint Management dialog box (see *Manage your Navigation Data*).

**Set the Default Track Appearance**

Use the instructions in this section to customize settings for all new tracks. To edit tracks after they’ve been saved, see *Edit the Current Track* and *Manage your Navigation Data*.

1. **Main Menu**: Press the MENU key twice. Select the *Nav* tab.
2. Select Saved Track Defaults. Press the RIGHT Cursor key.

### Changing the Current Track Appearance

- **Visibility**: Hidden or visible
- **Style**: To display the color options, select a line style.
- **Color**: Save

![Current Track settings](chart-view-current-track-displayed.png)
3. Use the Cursor Control key to change the following:

| Visibility | To show all tracks on the chart, select Visible. To hide tracks, select Hidden. If you choose Hidden, the control head continues to save trackpoints, but the track will not be displayed on the view. |
| Style | Select a line style (dotted, line, etc.) for all new tracks. |
| Color | If you select a line style, you can also select the line color. |

4. Save: Select Save. Press the RIGHT Cursor key.

**Change the Trackpoint Interval and Trackpoint Min Distance**

Trackpoint Interval and Track Min (minimum) Distance work together to add a trackpoint to the current track. During slow travel or drift, setting both Trackpoint Interval and Track Min Distance to small values increases the track resolution. Setting the menus to higher values will cause the track to extend back further in time, but it will be less detailed.

1. **Main Menu (Advanced User Mode):** Press the MENU key twice. Select the Nav tab.
2. Select Trackpoint Interval.
3. Press the RIGHT or LEFT Cursor keys to adjust the setting.
4. Select Track Min Distance.
5. Press the RIGHT or LEFT Cursor keys to adjust the setting.

**Save the Current Track**

Use the following instructions to save the current track and start a new track.

1. **Chart X-Press Menu:** With a Chart View displayed on-screen, press the MENU key once.
2. Select Save Current Track. Press the RIGHT Cursor key.
3. Follow the on-screen prompts to save or discard the track.

**NOTE:** It is important to save the track before powering off the control head.

**Edit the Current Track**

Use the following instructions to edit the current track. To edit a saved track, see *Manage your Navigation Data*.

1. **Main Menu:** Press the MENU key twice. Select the Nav tab.
2. Select Current Track. Press the RIGHT Cursor key.
3. Select Appearance.
4. Use the Cursor Control key to change the visibility, style, and color.
   - See *Change New Track Settings* for details.
5. **Save:** Select Save. Press the RIGHT Cursor key.
**Clear the Current Track**

Use the following instructions to clear the current track on the view and start a new track at the present boat position.

1. **Chart X-Press Menu:** With a Chart View displayed on-screen, press the MENU key once.
2. Select Clear Current Track.
3. Press the RIGHT Cursor key.

**Show/Hide the Current Track**

The current track is shown on the Chart View automatically. To hide or show the current track, use the following instructions. To show or hide a saved track, see *Manage your Navigation Data*.

1. **Main Menu:** Press the MENU key twice. Select the **Nav** tab.
2. Select Current Track. Press the RIGHT Cursor key.
3. Select Appearance.
4. Select Visibility.
5. Select Hidden or Visible.
6. **Save:** Select Save. Press the RIGHT Cursor key.

**Stop Tracking**

Use the instructions in this section to turn off tracking. If you turn off tracking, the unit will not save trackpoints.

1. **Main Menu:** Press the MENU key twice. Select the **Nav** tab.
2. Select Current Track. Press the RIGHT Cursor key.
3. Select Stop Tracking. Press the RIGHT Cursor key.

To start tracking, select the Nav tab > Current Track > Start Tracking.
There are many ways to search the area for ports, tide stations, and current stations. You can also search for information based on the cursor position. The search options and the search area distance are determined by the installed map card and selected map source.

**Search by Nearest Port, Tide Station, or Current Station**

The control head must have a separate-purchase map card installed to enable the features in this section.

1. Press the CHECK/INFO key.
2. Select Nearest Port, Nearest Tide Station, or Nearest Current Station.
3. Press the RIGHT Cursor key.

**Search by Cursor Position**

1. Use the Cursor Control key to move the cursor to a waypoint or position on the chart.
2. Press the CHECK/INFO key.

---

**Chart Info: Tide Station**

| Latitude: | N 25°46.196' |
| Longitude: | W 080°07.902' |
| Land area: | TIDE STATION: MIAMI HARBOR ENTRANCE |
| Latitude: | N 25°46.200' |

**Chart Info: Cursor Position**

| Latitude: | N 34°15.527' |
| Longitude: | W 083°57.256' |
| Depth area (40-60 ft): Administration area (Named) "UNITED STATES" (national). Administration area (Named) |
### Search for Contour Depth

1. Use the Cursor Control key to move the cursor to a contour on the chart.
2. Press the CHECK/INFO key.

### Search for a Lake

**Use this menu to display a lake other than your current location.** The lake map displayed on the Chart View is based on the GPS latitude/longitude position and the Humminbird LakeMaster map card installed in the control head. GPS reception is required for the correct lake to be displayed.

The **Lake List** menu option allows you to display a different lake from the installed map card. When you select a lake, the cursor will move to the lake so you can see it on the Chart View. Then, you can mark waypoints, press the GOTO key to start navigation toward a waypoint, or press the CHECK/INFO key for more information.

**No GPS Reception:** If you don’t have a GPS Fix, you can view the lake in Simulator mode. When you power on the control head, press the MENU key. Select Simulator from the Start-Up Options Menu. You can mark waypoints and routes and save them in Simulator mode.

![NOTE: A Humminbird LakeMaster map card must be installed to enable this feature.]

**Search for a Lake**

1. **Main Menu:** Press the MENU key twice. Select the **HB Chart** tab.
2. Select Lake List.
3. Press the RIGHT Cursor key.

**Sort By:** Select the Sort By field, and press the RIGHT or LEFT Cursor keys to select a sort option for the list. You can sort alphabetically, identify the high-definition lakes (Hi-Def) on your card, etc.

**Scroll:** Press the UP or DOWN Cursor keys to scroll through the list. As each lake is highlighted, you can view information about the lake in the box displayed on the screen.

**Cursor To:** Select a lake on the list. Press the RIGHT Cursor key.

#### Selecting a Lake to Display

![Select Lake to Move Cursor To](image)
MANAGE YOUR NAVIGATION DATA

Your control head allows you to start navigation or edit your navigation data from the Chart View. You can also start navigation or edit navigation data from the Waypoint Management dialog box. The instructions in this section apply to the Waypoint Management dialog box.

Overview

Open the Waypoint Management Dialog Box

1. **Main Menu:** Press the MENU key twice. Select the **Nav** tab.
2. Select Waypoints, Routes, Tracks.
3. Press the RIGHT Cursor key.

Sort

You can sort your saved navigation data alphabetically or by newest/oldest date, distance, or icon.

1. Press the EXIT key.
2. Select Sort By.
3. Press the RIGHT or LEFT Cursor keys to select a sort setting.

Select a File

Use these instructions to select an individual waypoint, route, track, or group. Then, use the submenu to apply settings or actions to the selected file.

1. Press the DOWN or UP Cursor keys to select a waypoint, route, track, or group.
2. **Open the Submenu:** Press the RIGHT Cursor key.

#### Default Group: Home

**Scroll through the List**

**Open a Menu**

**Go Back**
**Jump to the Top**

The Options menu, and other important actions, are located at the top of the Waypoint Management dialog box. Use these instructions to quickly select Options or jump to the top.

1. Press the EXIT key.
**Manage Waypoints**

When you press the MARK key and create a new waypoint, an alphanumeric name (beginning with WP) is assigned to the waypoint. ICE HELIX CHIRP models also use alphanumeric names, but they begin with IC. You can use the Waypoint Management dialog box to edit the saved waypoint or create a new waypoint. You can also select a waypoint icon and category for all new waypoints.

**Open the Waypoint Submenu**

1. Select a waypoint from the Waypoint Management dialog box. Press the RIGHT Cursor key.
2. Select one of the following menu options:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Edit</strong></td>
<td>Opens the Edit Waypoint menu. See <em>Edit a Saved Waypoint</em> for details.</td>
</tr>
<tr>
<td><strong>Delete</strong></td>
<td>Deletes the waypoint. To remove the waypoint from the group, choose Selected. To delete the waypoint from all groups, choose All Instances. See <em>Delete a Waypoint</em> for details.</td>
</tr>
<tr>
<td><strong>Duplicate</strong></td>
<td>Creates a copy of the waypoint and adds it to a new group or route [see <em>Search and Organize</em>].</td>
</tr>
<tr>
<td><strong>Save As</strong></td>
<td>Creates a new waypoint [based on the selected waypoint] and opens a menu so you can change the new waypoint’s name. See <em>Search and Organize</em> for details.</td>
</tr>
<tr>
<td><strong>Move</strong></td>
<td>Moves the waypoint from the selected group to a different group [see <em>Search and Organize</em>].</td>
</tr>
<tr>
<td><strong>Cursor To</strong></td>
<td>Moves the cursor to the selected waypoint in the Chart View [see <em>Navigation Overview: Waypoints</em>].</td>
</tr>
<tr>
<td><strong>Go To</strong></td>
<td>Starts navigation to the selected waypoint [see <em>Navigation Overview: Waypoints</em>].</td>
</tr>
<tr>
<td><strong>Target</strong></td>
<td>Displays a target on the selected waypoint in the Chart View [see <em>Navigation Overview: Waypoints</em>].</td>
</tr>
<tr>
<td><strong>Grid</strong></td>
<td>Displays a grid on the selected waypoint in the Chart View [see <em>Navigation Overview: Waypoints</em>].</td>
</tr>
</tbody>
</table>
Edit a Saved Waypoint

1. Select a waypoint. Press the RIGHT Cursor key.
2. Select Edit. Press the RIGHT Cursor key.
3. Use the Cursor Control key to edit the available fields.

<table>
<thead>
<tr>
<th>Name</th>
<th>Select the file name, and press the RIGHT Cursor key. See the illustration Changing the Waypoint Name.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Icon Category</td>
<td>Select All to view all available icons. [All, Geometry, Alerts, Supplies, Navigation, Recreation, Fish, Environment]</td>
</tr>
<tr>
<td>Icon</td>
<td>The available icons are determined by the category selected in Icon Category.</td>
</tr>
<tr>
<td>Visibility</td>
<td>To show the waypoint icon on the Chart View, select Visible. To hide it, select Hidden.</td>
</tr>
<tr>
<td>Latitude</td>
<td>To move from space to space, press the RIGHT or LEFT Cursor keys. To change the letter or number, press the UP or DOWN Cursor keys.</td>
</tr>
</tbody>
</table>

4. **Save:** Select Save. Press the RIGHT Cursor key.
Create a New Waypoint

Use the following instructions to create a new waypoint and add your own settings. To mark a waypoint in Chart View, see Navigation Overview: Waypoints.

1. **Open a Group or Route:** Select a group or route (where you want to save the new waypoint). Press the RIGHT Cursor key. Home is the highest level group, or the main directory, in the Waypoint Management dialog box.

2. Select Open. Press the RIGHT Cursor key.

3. Select Options > New > New Waypoint.

4. **Create New Waypoint:** Use the Cursor Control key to set the available fields. See Edit a Saved Waypoint for details.

5. **Save:** Select Save. Press the RIGHT Cursor key.
Set the Waypoint Icon Default

Use the following instructions to set the waypoint icon category and the waypoint icon for all new waypoints.

NOTE: If the Waypoint Management dialog box is open, press the EXIT key to close the dialog box, and proceed with the following instructions.

1. **Main Menu:** Press the MENU key twice. Select the **Nav** tab.
2. Select Waypoint Settings. Press the RIGHT Cursor key.
3. Use the Cursor Control key to set your new waypoint preferences.

<table>
<thead>
<tr>
<th>Icon Category</th>
<th>Select All to view all available icons. [All, Geometry, Alerts, Supplies, Navigation, Recreation, Fish, Environment]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Default Waypoint Icon</td>
<td>The available icons are determined by the category selected in Icon Category.</td>
</tr>
</tbody>
</table>
| New Waypoint Icon   | **Default:** When you mark a waypoint, the waypoint will be marked using the settings.  
                        **Select:** Each time you mark a waypoint, you will be prompted to change the waypoint icon and category. To accept the current settings, press the MARK key again. See *Waypoints: Mark and Edit Waypoints [on-the-go]* in the Navigation section. |

4. **Save:** Select Save. Press the RIGHT Cursor key.

Delete a Waypoint

1. Select a waypoint. Press the RIGHT Cursor key.
2. Select Delete. Press the RIGHT Cursor key.
3. To remove the waypoint from the group, choose Selected.
   - To delete the waypoint from all groups, choose All Instances.
4. Follow the on-screen prompts to delete the waypoint.
### Manage Routes

You can edit your saved routes, and you can also create new routes from scratch using your saved waypoints. Route names are alphanumeric and begin with RT.

### Open the Route Submenu

1. Select a route from the Waypoint Management dialog box. Press the RIGHT Cursor key.
2. Select one of the following menu options:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Open</td>
<td>Displays the saved waypoints in the route. You can change the waypoint order from this menu (see <em>Change the Waypoint Order in a Route</em>).</td>
</tr>
<tr>
<td>Travel</td>
<td>Starts navigation on the selected route in forward or reverse (see <em>Travel a Saved Route</em>).</td>
</tr>
<tr>
<td>Add/Remove</td>
<td>Copies waypoints into the route or deletes waypoints from the route. See <em>Add Waypoints to a Route</em> and <em>Delete a Waypoint from a Route</em>.</td>
</tr>
<tr>
<td>Edit</td>
<td>Opens the Edit Route menu. See <em>Edit a Saved Route</em> for details.</td>
</tr>
<tr>
<td>Delete</td>
<td>Deletes the route. To delete the route from the selected group, choose Selected. To delete the route from all groups, choose All Instances. See <em>Delete a Route</em> for details.</td>
</tr>
<tr>
<td>Duplicate</td>
<td>Creates a copy of the route and adds it to a new group (see <em>Search and Organize</em>).</td>
</tr>
<tr>
<td>Save As</td>
<td>Creates a new route (based on the selected route) and opens a dialog box so you can change the new route’s name (see <em>Search and Organize</em>).</td>
</tr>
<tr>
<td>Move</td>
<td>Moves the route from the selected group to a different group (see <em>Search and Organize</em>).</td>
</tr>
<tr>
<td>Info</td>
<td>Opens the Route Info box and displays the waypoints in the route. To change the waypoints in a route, see <em>Add Waypoints to a Route</em> and <em>Delete a Waypoint from a Route</em>.</td>
</tr>
</tbody>
</table>
Open a Saved Route

1. Select a route. Press the RIGHT Cursor key.
2. Select Open. Press the RIGHT Cursor key.

Review Route Distance Information

Use the instructions in this section to open a saved route and review the distance and bearing from each waypoint to the next.

1. Select a route. Press the RIGHT Cursor key.
2. Select Info. Press the RIGHT Cursor key.
Travel a Saved Route
1. Select a route. Press the RIGHT Cursor key.
2. Select Travel. Press the RIGHT Cursor key.
3. Select Forward or Reverse. Press the RIGHT Cursor key.

Navigation begins immediately. The Waypoint Management dialog box will close so you can see the route on the Chart View.

Edit a Saved Route
You can customize a route name, add or remove waypoints, and change the travel order for navigation.

To add waypoints to the route, or delete waypoints from the route, see Add Waypoints to a Route and Delete a Waypoint from a Route.

To change the travel order in a route, see Change the Waypoint Order in a Route.

1. Select a route. Press the RIGHT Cursor key.
2. Select Edit. Press the RIGHT Cursor key.
3. Use the Cursor Control key to edit the available fields.

<table>
<thead>
<tr>
<th>Name</th>
<th>Select the file name, and press the RIGHT Cursor key. See the illustration Changing the Route Name.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Visibility</td>
<td>To show the route on the Chart View, select Visible. To hide it, select Hidden.</td>
</tr>
</tbody>
</table>

4. Save: Select Save. Press the RIGHT Cursor key.

Changing the Route Name

Move from Space to Space  Select a Letter, Number, or Symbol  Save

179 Manage Routes
Create a New Route

1. **Open a Group**: Select a group [where you want to save the new route]. Press the RIGHT Cursor key.
   
   Home is the highest level group, or the main directory, in the Waypoint Management dialog box.

2. Select Options > New > New Route.

3. **Create New Route**: Use the Cursor Control key to edit the available fields.

<table>
<thead>
<tr>
<th>Name</th>
<th>Select the item name, and press the RIGHT Cursor key. See the illustration <em>Changing the Route Name</em>.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Visibility</td>
<td>To show the route on the Chart View, select Visible. To hide it, select Hidden.</td>
</tr>
</tbody>
</table>

4. **Plan Route**: Select Plan Route. Press the RIGHT Cursor key.

   The New Route menu closes so you can select waypoints to add to the route.

   ![Selecting Plan Route](image)

5. **Add Waypoints**: Press the UP or DOWN Cursor keys to scroll through the available waypoints.

   To add a selected waypoint to the route, press the RIGHT Cursor key.

   Repeat as needed. See the illustration *Adding Waypoints to a Route*.

6. **Save**: Press the EXIT key to select Save. Press the RIGHT Cursor key.
Adding Waypoints to a Route

When you add a waypoint to a route, it is a copy. If you make changes to the copy, the changes will be made to all copies.

1. Select a route. Press the RIGHT Cursor key.

2. Select Add/Remove. Press the RIGHT Cursor key. The menu will close.

3. Press the UP or DOWN Cursor keys to choose a waypoint. Press the RIGHT Cursor key to add it to the route.

4. **Save**: Press the EXIT key to select Save. Press the RIGHT Cursor key.

---

Add Waypoints to a Route
When you add a waypoint to a route, it is a copy. If you make changes to the copy, the changes will be made to all copies.

1. Select a route. Press the RIGHT Cursor key.

2. Select Add/Remove. Press the RIGHT Cursor key.

   The menu will close.

3. Press the UP or DOWN Cursor keys to choose a waypoint. Press the RIGHT Cursor key to add it to the route.

4. **Save**: Press the EXIT key to select Save. Press the RIGHT Cursor key.
Delete a Waypoint from a Route
1. Select a route. Press the RIGHT Cursor key.
2. Select Open. Press the RIGHT Cursor key.
3. Select a waypoint in the route. Press the RIGHT Cursor key.
4. Select Delete. Press the RIGHT Cursor key.
5. To remove the waypoint from the group, choose Selected.
   To delete the waypoint from all groups, choose All Instances.
6. Follow the on-screen prompts to delete the waypoint.

Change the Waypoint Order in a Route
1. Select a route. Press the RIGHT Cursor key.
2. Select Open. Press the RIGHT Cursor key.
3a. Select Reverse, and press the RIGHT Cursor key. This will quickly reverse the order of the route.
   OR
3b. Choose a Waypoint in the route, and press the RIGHT Cursor key.
   Select Reorder, and press the RIGHT Cursor key.
   To move the waypoint up or down in the route order, press the UP or DOWN Cursor keys.
   See the illustration Changing the Route Order (Moving a Waypoint).
4. Press the EXIT key to select Save.
   Press the RIGHT Cursor key.

Delete a Route
1. Select a route. Press the RIGHT Cursor key.
2. Select Delete. Press the RIGHT Cursor key.
3. To remove the route from the group, choose Selected.
   To delete the route from all groups, choose All Instances.

</tr>
<tr>
<td>Color</td>
<td>Select a color. The Color field is available if you’ve selected a solid line in the Style field.</td>
</tr>
</tbody>
</table>

4. **Save**: Select Save. Press the RIGHT Cursor key.

**Delete a Saved Track**

1. Select a track. Press the RIGHT Cursor key.
2. Select Delete. Press the RIGHT Cursor key.
3. To remove the track from the group, choose Selected.
   - To delete the track from all groups, choose All Instances.
Manage Groups

Use groups to organize your waypoints, routes, and tracks in one set. Some anglers prefer to group their navigation items by trip, fish-type, body of water, or time of day. New group names are alphanumeric and begin with GP, and you can edit the name.

**NOTE:** Groups and sub-groups use storage. The storage limit of your waypoints and routes may vary due to the complexity of your Waypoint Management directory.

Open the Group Submenu

1. Select a group from the Waypoint Management dialog box. Press the RIGHT Cursor key.
2. Select one of the following menu options:

<table>
<thead>
<tr>
<th>Open</th>
<th>Displays the saved waypoints, routes, and tracks in the group.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add/Remove</td>
<td>Copies waypoints, routes, and tracks into the group or deletes files from the group [see Add/Remove Navigation Items].</td>
</tr>
<tr>
<td>Edit</td>
<td>Opens the Edit Group menu. See Edit a Group for details.</td>
</tr>
<tr>
<td>Delete</td>
<td>Deletes the group [see Delete a Group].</td>
</tr>
<tr>
<td>Move</td>
<td>Moves the group from one location to another [see Search and Organize].</td>
</tr>
</tbody>
</table>
Set a Group as the Default Directory
To save all your new waypoints, routes, and tracks to a designated group, use the following steps:

1. Select a group. Press the RIGHT Cursor key.
2. Select Open. Press the RIGHT Cursor key.
3. Select Options > Set as Default.

Create a New Group

1. Select a Save Location: Use the Cursor Control key to choose where you want to save the new group.
   - Home is the highest level group, or the main directory. You can also add a subgroup to an existing group. The current group is where the new data will be saved.
3. Use the Cursor Control key to set the available fields.
4. Add Items: Select Add Items, and press the RIGHT Cursor key.
   - The New Group dialog box will close so you can select items from the Waypoint Management dialog box. You can also leave the group empty and add to it later.
   - Press the UP or DOWN Cursor keys to choose a waypoint, route, or track, and press the RIGHT Cursor key to add it to the group.
   - Repeat as needed. See the illustration Adding Items to a Group.
5. Save: Press the EXIT key to select Save. Press the RIGHT Cursor key.

NOTE: When you add an item to a group, it is a copy. If you make changes to the copy, the changes will be made to all copies. For example, if you change the waypoint icon for a waypoint that is saved in more than one group, the icon will change in all the groups where the waypoint is saved.
Add/Remove Navigation Items

1. Select a group. Press the RIGHT Cursor key.

2. Select Add/Remove. Press the RIGHT Cursor key.
   The menu will close.

3. Add: Press the UP or DOWN Cursor keys to choose a waypoint, route, or track. Press the RIGHT Cursor key to add it to the group.
   Remove: Select an item in the group. Press the RIGHT Cursor key to delete it.

4. Repeat step 3 as needed. You can add or remove items from any other group in the Waypoint Management dialog box.

5. Save: Press the EXIT key to select Save. Press the RIGHT Cursor key.

   **NOTE:** When you add an item to a group, it is a copy. If you make changes to a copy, the changes will be made to all copies.
Edit a Group

1. Select a group. Press the RIGHT Cursor key.
2. Select Edit. Press the RIGHT Cursor key.
3. Use the Cursor Control key to edit the available fields.

<table>
<thead>
<tr>
<th>Name</th>
<th>Select the file name, and press the RIGHT Cursor key. See the illustration Changing the Group Name.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Visibility</td>
<td>To show the group on the Chart View, select Visible. To hide it, select Hidden.</td>
</tr>
</tbody>
</table>

4. Save: Select Save. Press the RIGHT Cursor key.

Delete a Group

1. Select a group. Press the RIGHT Cursor key.
2. Select Delete. Press the RIGHT Cursor key.
3. Follow the on-screen prompts to confirm.
Search and Organize

The Waypoint Management dialog box allows you to move your waypoints, routes, and tracks into a designated group, make copies, and search for information. You can also organize your navigation items in HumminbirdPC [see Import/Export Navigation Data], and visit our Web site at humminbird.com for details.

Search By

Search By allows you to search the items in the Waypoint Management dialog box by Name, Distance, Date, Icon, or Icon Category.

1. Select Options. Press the RIGHT Cursor key.
2. Select Search By.
3. Select a search category. Press the RIGHT Cursor key.
4. Use the Cursor Control key to enter your search criteria in the dialog box.
5. Select Enter. Press the RIGHT Cursor key to start the search.

Duplicate or Move

Use the following instructions to move or duplicate a waypoint, route, or track. Groups can be moved, but they cannot be duplicated.

NOTE: When you make changes to a copied item, the changes are applied to all copies. To make a copy and set the item apart from its copies, use Save As [see Create a Copy and Save as a New Item].

1. Select a waypoint, route, track, or group. Press the RIGHT Cursor key.
2. Select Move or Duplicate.
   - Duplicate: To create a copy of the waypoint, route, or track so that it appears in more than one group, select Duplicate.
   - Move: To delete the group, waypoint, route, or track from one group and transfer it to another group, select Move.
3. Use the Cursor Control key to select the destination group or route (waypoints only).
4. Press the EXIT key to select Paste here. Press the RIGHT Cursor key to confirm the change.
Create a Copy and Save as a New Item

Use the instructions in this section to copy a waypoint, route, or track and save it as a separate item. The new item retains the properties from the original, but it will not be affected by changes to the original.

1. Select a waypoint, route, or track. Press the RIGHT Cursor key.
2. Select Save As. Press the RIGHT Cursor key.
3. Use the Cursor Control key to name the new item.
4. 
   **Save**: Select Save. Press the RIGHT Cursor key.
Import/Export Navigation Data

Import Navigation Data
Use the following instructions to import waypoints, routes, tracks, and groups into your Humminbird control head. The control head will import Humminbird navigation data from an installed microSD or SD card. See HELIX Control Head for compatibility details.

If the navigation data is from another source or format, it must be converted (using HumminbirdPC) before you can import it. Visit our Web site at humminbird.com for details.

WARNING! Do NOT import navigation data from unknown sources into your Humminbird control head without first converting the data to the correct format using HumminbirdPC. Importing corrupted data can cause the unit to malfunction, which can result in lost navigation data.

1. Install a loaded microSD or SD card into the control head.
2. Follow the on-screen prompts to confirm or cancel the import.

Export ALL Navigation Items
Export your navigation items to an unlocked, installed microSD or SD card (separate purchase required) and then view them in HumminbirdPC. Visit our Web site at humminbird.com for details.

1. Select Options > Select All and... > Export.
2. Follow the on-screen prompts to confirm or cancel the export.

Export Selected Navigation Items
You can also select individual navigation items and export them to an unlocked, installed microSD or SD card. See HELIX Control Head for compatibility details.

1. From a selected group, select Options > Select Multiple and... > Export.
2. Select Items: Press the UP or DOWN Cursor keys to scroll through the waypoints, routes, and tracks. Press the RIGHT Cursor key to select an item. Repeat as needed.
3. Confirm Export: Press the EXIT key to select Export Selected.
   Press the RIGHT Cursor key. Follow the on-screen prompts to confirm or cancel the export.

Delete all Navigation Data and Reset
Use Format Nav Directories to delete ALL navigation data (waypoints, routes, tracks, and groups) and reset the navigation data directory in the Waypoint Management dialog box. You may need to reset the navigation directory if you’ve imported corrupted navigation data from an unknown source, which can cause the unit to malfunction.

CAUTION! Use this menu with caution! Contact Humminbird Customer Service before using this menu option.

NOTE: It is important to back up your control head’s data files periodically. Data files should also be saved to your PC before restoring the unit’s defaults or updating the software. See Manage your Navigation Data: Import/Export Navigation Data.

1. Main Menu: Press the MENU key twice. Select the Setup tab.
2. Select Format Nav Directories.
3. Press the RIGHT Cursor key.
4. Follow the on-screen prompts to confirm the deletion.
AutoChart Live Overview

AutoChart Live uses data from an installed GPS receiver and 2D transducer (down beam, DualBeamPLUS) to create detailed depth maps of your favorite waters.

Map Source: Humminbird LakeMaster or Navionics

Storage: AutoChart Live saves 8 hours of mapping data on your control head. After 8 hours of data has been collected, you can erase the data and continue mapping, or you can purchase a ZeroLine Map Card for unlimited mapping.

ZeroLine Map Card: To purchase a ZeroLine Map Card and download the accessory guide, visit our Web site at humminbird.com.

Plan Your Map

Before getting started, consider the areas where you want to create a map. Review the following tips to plan your map:

General Tips

• Start with your favorite fishing hot spots. It is not recommended to record survey data of an entire lake, as it will require a lot of time to map and might include areas you don’t want.

• Take a different route to and from each fishing spot every trip. You may discover new and interesting areas to map.

• Start a new track or recording when you start for the day. Record new data every trip to create new maps or improve existing maps.

• Navigate the boat at a consistent speed when recording data.

• See the illustration below for instruction on how to navigate your boat while recording survey data.

Mapping a Specific Area or Object in Detail

• Navigate the boat across the area rather than alongside.

• Turn the boat where the area and/or object is out of range of the transducer beam[s].

• Try to reduce the measurement time, so as to reduce the error due to possible GPS variations.

Mapping an Entire Lake

• Follow a plan.

• Follow the maximum gradient of the sea floor (up or down).

• Keep a steady speed. For optimal performance, 0 to 8 mph is recommended.

• Turn the boat where the bottom is flat if possible.

Navigating the Boat to Record Survey Data

Navigate your boat in a zig-zag pattern, first in one direction and then in the other.
1. **Prepare the Control Head for Mapping**

When you start your mapping for the day, it is important to note if the water level is higher or lower than usual. It is also important to use your 2D transducer beams exclusively.

### Set the Map Source

AutoChart Live can be used when a Humminbird LakeMaster or Navionics map card is installed and selected as the map source. When you install a map card, the map source is changed automatically to match the microSD or SD card map source. You can also change the map source manually. If your control head has two cards installed, you can choose which map source you want to use (HELIX 8, 9, 10, 12 only).

1. **Main Menu:** Press the MENU key twice. Select the **Chart** tab.
2. Select **Map Source**.
3. Select the installed Humminbird LakeMaster or Navionics map card location or a built-in map.

### Confirm the 2D Transducer and Turn off Additional Transducers

To record your custom map, you must have a reliable and accurate digital depth from a pinging 2D transducer. You can use your Humminbird DualBeam PLUS transducer (83/200 kHz), Side Imaging transducer with 2D (down beam) capabilities, or a CHIRP transducer with 2D (down beam) capabilities.

**When you are recording your map, you should have only one 2D transducer pinging on your boat.** If you have other 2D transducers pinging on remote control heads, you should turn them off. Down Imaging and Side Imaging beams can operate at the same time. You do not need to turn them off.

1. **Main Menu:** Press the MENU key twice. Select the **Sonar** tab.
2. Select **Connected Transducer**.
3. Confirm the transducer connected to the control head is selected.
4. If there are additional control heads on your boat with a 2D transducer, confirm that they are not pinging while you are mapping. There should be only one 2D transducer pinging on your boat during the recording process.
Confirm Digital Depth and GPS Fix

1. Display a Chart View on-screen.

2. **Confirm Digital Depth**: Confirm the depth digital readout is displayed.
   It may take a moment for depth to be displayed.

3. **Confirm GPS Fix**: Confirm the speed digital readout is displayed.

   **NOTE**: Digital readouts can be displayed as an overlay, or they can be displayed in data boxes [see Views: Display Digital Readouts].

Adjust the Water Level Offset

When you start your mapping for the day, it is important to note if the water level is higher or lower than usual. For example, if you know the lake is down 3 feet, set the Water Level Offset to -3.

1. **Main Menu**: Press the MENU key twice. Select the HB Chart tab.

2. Select Water Level Offset.

3. Use the RIGHT or LEFT Cursor keys to adjust the setting.

   **If the water level is higher than normal**, set a positive amount.

   **If the water level is lower than normal**, set a negative amount.

   **If the water level has not changed [normal]**, turn off Water Level Offset.
**Display the Current Track (optional)**

It is helpful to display the current track so you can see where the boat has already traveled while you’re recording the map.

1. **Main Menu:** Press the MENU key twice. Select the **Nav** tab.
2. Select Current Track. Press the RIGHT Cursor key.
3. Select Appearance. Press the RIGHT Cursor key.
4. Select Visibility. Press the RIGHT or LEFT Cursor key to select Visible.
5. **Save:** Select Save. Press the RIGHT Cursor key.

**Start a Sonar Recording for AutoChart PC (optional)**

If you are planning to use AutoChart PC, start a sonar recording before you start recording your custom map.

1. Install a microSD or SD card into the control head card slot.
   See *HELIX Control Head* for compatibility details.
2. Press and hold the VIEW key.
3. Select System > Snapshot and Recording View.
4. Press the MENU key.
5. Select Start Recording. Press the RIGHT Cursor key.

**File Name:** A waypoint will also be created at the boat location, and the recording shares the same file name as the waypoint (.SON).

**Use Different Views:** To use different views on the control head and continue recording, press the EXIT key.

**Not Available:** Taking screen snapshots and playback mode are not available during recording.

**NOTE:** For more information, see *Manage Screen Snapshots and Recordings*. Also, visit our Web site at humminbird.com to purchase AutoChart PC and download the manual.
2. Record your Custom Map

1. **Preparation:** Before you start mapping for the day, confirm that the control head is set up as shown in the section *Prepare the Control Head for Mapping.*

2. **Chart X-Press Menu:** With a Chart View displayed on-screen, press the MENU key once.

4. Select Record.

5. Select On.

   **Display:** Select AutoChart Live. Select Visible.

   **Zoom In:** Press the +ZOOM key to see the depth data on the Chart View.

6. Navigate your boat in a zig-zag pattern, first in one direction and then in the other. For optimal performance, maintain a consistent speed between 0 and 8 mph. See *Plan your Map* for details.

---

Starting an AutoChart Live Recording

- **AutoChart Live**
  - **Record**
    - **On**
  - **Visible**
  - **AC Live Transparency**
  - **AC Live Options**
  - **Show Raw Data**
  - **Bottom Layer**
  - **Hidden**
  - **AC Live Color Bar**
  - **Internal**

- **Heading line** (green line)
- **Current track** (red line)
- **Depth map in progress**
- **Depth scale** (AC Live Color Bar)
**3. Stop Recording**

Use the instructions in this section to stop recording. Your map is automatically saved to the control head (internal) or to the ZeroLine Map Card if it is installed.

1. **Chart X-Press Menu:** With a Chart View displayed on-screen, press the MENU key once.
2. Select AutoChart Live. Press the RIGHT Cursor key.
3. Select Record.
4. Select Off.

If you do not have a ZeroLine Map Card installed, and the control head storage [8 hours] is reached, the control head will provide a dialog box to Confirm or Clear Data. To save your map and turn off recording, select Confirm. To erase your map and start over, select Clear Data.

**Correct Data**

If you see an irregularity in the data (such as lost depth), it can be deleted. Recording must be turned off while you correct the data.

1. **Chart X-Press Menu:** With a Chart View displayed on-screen, press the MENU key once.
2. Select AutoChart Live. Press the RIGHT Cursor key.
3. Select Show Raw Data. Press the RIGHT Cursor key.
4. Press the +ZOOM key to see individual data points.
5. Move the cursor over a data point.
6. From the AutoChart Live menu, select Delete. Press the RIGHT Cursor key.

**Selecting a Data Point**

![Selecting a Data Point](image)
**Open the AutoChart Live Menu**

You will use the AutoChart Live menu for all settings. Some of the menu options in this section may be displayed in other parts of the menu system so that you can access them quickly. No matter where you make the change, the control head will update the setting across the system.

1. **Chart X-Press Menu:** With a Chart View displayed on-screen, press the MENU key once.
2. Select AutoChart Live. Press the RIGHT Cursor key.

**Display the AutoChart Live Map**

You can make changes to the AutoChart Live map during recording or after you’ve saved your map. You can also view bottom hardness or vegetation data, and you can customize how the data is displayed.

**Show/Hide the AutoChart Live Map**

The custom map can be displayed or hidden while you are recording or after the map is saved. You can also adjust the transparency.

**Show the AutoChart Live Map**

1. From the AutoChart Live menu, select AutoChart Live.
2. Select Visible.

**Hide the AutoChart Live Map**

1. From the AutoChart Live menu, select AutoChart Live.
2. Select Hidden.
Adjust the Transparency

1. From the AutoChart Live menu, select AC Live Transparency.
2. Press the RIGHT or LEFT Cursor keys to adjust the setting.

Display the AC Live Color Bar

The AC Live Color bar allows you to display the palette icon for AutoChart Live or Bottom Type. See the illustrations Chart View with AutoChart Live Map Displayed and Chart/Chart Combo View.

You can use this icon to see the selected palette and, from left to right, the AutoChart Live depth range (low to high), Bottom Hardness range (soft to hard), or Vegetation range (soft to hard).

Show/Hide the AC Live Color Bar

1. From the AutoChart Live menu, select AC Live Color Bar.
2. Select a display bar.

Display AutoChart Live and Bottom Layer in Chart/Chart Combo View

You can also use the Chart/Chart Combo View to display AutoChart Live and Bottom Layer data at the same time. Use the X-Press Menu to make adjustments to each pane. See Views: Combo Views for more information.

Display the Chart/Chart Combo View

1. Press and hold the VIEW key.
2. Select Chart > Chart/Chart Combo View.
CUSTOMIZE THE AUTOCHART LIVE MAP DISPLAY SETTINGS

Use the AutoChart Live Options menu to adjust the depth range, contour interval, and map position. You can also change the color palette and shading.

Open the AutoChart Live Options Menu

You will use the AutoChart Live Options menu for all display settings.

1. Chart X-Press Menu: With a Chart View displayed on-screen, press the MENU key once.
2. Select AutoChart Live. Press the RIGHT Cursor key.
3. Select AC Live Options. Press the RIGHT Cursor key.

Adjust the Depth Range

You can adjust the range of data shown on the chart by changing the minimum range and maximum range on the display. The range you select affects how the depth colors are displayed. For related color or shading options, see Change the Display Colors.

1. From the AutoChart Live Options menu, select Min Range.
2. Press the RIGHT or LEFT Cursor keys to adjust the setting.
3. Select Max Range.
4. Press the RIGHT or LEFT Cursor keys to adjust the setting.

NOTE: Use the AC Live Color Bar icon to see the selected palette and, from left to right, the AutoChart Live depth range (low to high), Bottom Hardness range (soft to hard), or Vegetation range (soft to hard).
**Change the Display Colors**

Use the following instructions to change the color palette used to display the AutoChart Live map.

**NOTE:** Use the AC Live Color Bar icon to see the selected palette and, from left to right, the AutoChart Live depth range (low to high), Bottom Hardness range (soft to hard), or Vegetation range (soft to hard).
Show/Hide Depth Colors
Use the following instructions to show or hide the depth colors. If you hide the depth colors, the contours will be shown on the display.

1. From the AutoChart Live Options menu, select Depth Colors.
2. Select On [visible] or Off [hidden].

Change the Color Palette
The Color Palette menu changes the colors used to display the AutoChart Live map. The color range is shown in the AC Live Color bar and is affected by the Min Range and Max Range settings. See Adjust the Depth Range for more information.

1. From the Auto Chart Live Options menu, select Color Palette.
2. Select a palette.

Change the Highlight Color
If you’ve set the Depth Highlight and Depth Highlight Range in the HB Chart tab, and it is not easy to see with the AutoChart Live color palette you’ve selected, you can change the Highlight Color. See Display Humminbird LakeMaster Contour Lines and Depth Ranges for more information.

1. From the AutoChart Live Options menu, select Highlight Color.
2. Select a color.

Change the Shallow Color
If you’ve set the Shallow Water Highlight in the HB Chart tab, and it is not easy to see with the AutoChart Live color palette you’ve selected, you can change the Shallow Color. See Display Humminbird LakeMaster Contour Lines and Depth Ranges for more information.

1. From the AutoChart Live Options menu, select Shallow Color.
2. Select a color.
**Display Contour Lines and Adjust the Contour Interval**

You can display or hide the contour lines on the map, and you can adjust the distance between each contour line. Contour Interval is also affected by the Water Level Offset setting.

**Display the Contour Lines and Adjust the Contour Interval**

1. From the AutoChart Live Options menu, select Contour Lines.
2. Select Visible.
3. Select Contour Intervals.
4. Press the RIGHT or LEFT Cursor keys to adjust the setting.

**Change the Contour Lines Color**

1. From the AutoChart Live Options menu, select Contour Colors.
2. Select a color.
Add Settings with Chart Options

You can also add adjustments to your custom map using the HB Chart menu. For example, if Humminbird is set as the map source, you can add Depth Colors, Shallow Water, etc. to your AutoChart Live map. See *Display Humminbird LakeMaster Contour Lines and Depth Ranges*.

If Navionics is set as the map source, you can display Contours and Shading on your AutoChart Live map. See *Customize the Chart View* for more information.

![Adding Shallow Water Settings to the Map](image)

*Adding Shallow Water Settings to the Map (Map Source: Humminbird LakeMaster)*

Change the Water Level Offset

When you start your mapping for the day, it is important to note if the water level is higher or lower than usual. See *Prepare the Control Head for Mapping* for more information.

1. **Main Menu**: Press the MENU key twice. Select the **HB Chart** tab.

2. Select Water Level Offset.

3. Use the RIGHT or LEFT Cursor keys to adjust the setting.
   - **If the water level is higher than normal**, set a positive amount.
   - **If the water level is lower than normal**, set a negative amount.
   - **If the water level has not changed (normal)**, turn off Water Level Offset.
CUSTOMIZE THE BOTTOM HARDNESS DISPLAY SETTINGS

The Bottom Layer is displayed on top of the AutoChart Live map and can be displayed as bottom hardness or vegetation. Bottom Hardness shows strong sonar returns resulting from compacted sediment, rocks, fallen trees, etc.

Show/Hide Bottom Hardness

Show Bottom Hardness
1. From the AutoChart Live menu, select Bottom Layer.
2. Select Visible.
3. Select Bottom Type.
4. Select Bottom Hardness.

Hide Bottom Hardness
1. From the AutoChart Live menu, select Bottom Layer.
2. Select Hidden.
**Adjust the Gain Offset**

Use Gain Offset to tune the bottom hardness display. For example, if you’re fishing a lake where most of the lake has a hard bottom, reduce the gain so only the hardest bottom is displayed.

1. From the AutoChart Live menu, select Hardness Options.
   - Press the RIGHT Cursor key.
2. Select Gain Offset.
3. Press the RIGHT or LEFT Cursor keys to adjust the setting.

**Adjust the Bottom Hardness Transparency**

The bottom layer is displayed on top of the AutoChart Live map, and you can adjust the transparency to see different layers on the view.

1. From the AutoChart Live menu, select Hardness Transparency.
2. Press the RIGHT or LEFT Cursor keys to adjust the setting.
Adjust the Hardness Range

You can adjust the range of bottom hardness shown on the chart by changing the minimum range and maximum range on the display. The range you select affects how the bottom hardness colors are displayed. The range is displayed in the AC Live Color Bar with Bottom Hardness selected.

1. From the AutoChart Live menu, select Hardness Options.
   - Press the RIGHT Cursor key.
2. Select Min Hardness.
3. Press the RIGHT or LEFT Cursor keys to adjust the setting.
4. Select Max Hardness.
5. Press the RIGHT or LEFT Cursor keys to adjust the setting.

NOTE: Use the AC Live Color Bar icon to see the selected palette and, from left to right, the AutoChart Live depth range (low to high), Bottom Hardness range (soft to hard), or Vegetation range (soft to hard).
Use the following instructions to change the color palette used to display Bottom Hardness.

**Change the Bottom Hardness Colors**

1. From the AutoChart Live menu, select Hardness Options.
   - Press the RIGHT Cursor key.
2. Select Hardness Color.
3. Select a palette.

**NOTE:** Use the AC Live Color Bar icon to see the selected palette and, from left to right, the AutoChart Live depth range (low to high), Bottom Hardness range (soft to hard), or Vegetation range (soft to hard).

**Change the Hardness Colors**

The Hardness Color menu changes the colors used to display bottom hardness on the view. The color range is shown in the AC Live Color bar and is affected by the Min Hardness and Max Hardness settings. See *Adjust the Hardness Range* for more information.

1. From the AutoChart Live menu, select Hardness Options.
   - Press the RIGHT Cursor key.
2. Select Hardness Color.
3. Select a palette.
**CUSTOMIZE THE VEGETATION DISPLAY SETTINGS**

The Bottom Layer is displayed on top of the AutoChart Live map and can be displayed as bottom hardness or vegetation. Vegetation shows the sonar returns interpreted as vegetation on the Chart View.

### Show/Hide Vegetation

**Show Vegetation**

1. From the AutoChart Live menu, select Bottom Layer.
2. Select Visible.
3. Select Bottom Type.
4. Select Vegetation.

**Hide Vegetation**

1. From the AutoChart Live menu, select Bottom Layer.
2. Select Hidden.
**Adjust the Gain Offset**

Use Gain Offset to tune the vegetation display. Vegetation will vary with the lake, season, or environment you are fishing, and you should adjust the Gain Offset as needed.

1. From the AutoChart Live menu, select Vegetation Options.
   - Press the RIGHT Cursor key.
2. Select Gain Offset.
3. Press the RIGHT or LEFT Cursor keys to adjust the setting.

**Adjust the Vegetation Transparency**

The bottom layer is displayed on top of the AutoChart Live map, and you can adjust the transparency to see different layers on the view.

1. From the AutoChart Live menu, select Vegetation Transparency.
2. Press the RIGHT or LEFT Cursor keys to adjust the setting.
**Adjust the Vegetation Range**

You can adjust the range of vegetation shown on the chart by changing the minimum range and maximum range on the display. The range you select affects how the vegetation colors are displayed.

1. From the AutoChart Live menu, select Vegetation Options.
   - Press the RIGHT Cursor key.
2. Select Min Vegetation.
3. Press the RIGHT or LEFT Cursor keys to adjust the setting.
4. Select Max Vegetation.
5. Press the RIGHT or LEFT Cursor keys to adjust the setting.

**NOTE:** Use the AC Live Color Bar icon to see the selected palette and, from left to right, the AutoChart Live depth range [low to high], Bottom Hardness range [soft to hard], or Vegetation range [soft to hard].
**Change the Vegetation Colors**

Use the following instructions to change the color palette used to display vegetation.

![Changing the Vegetation Colors](image)

**NOTE:** Use the AC Live Color Bar icon to see the selected palette and, from left to right, the AutoChart Live depth range (low to high), Bottom Hardness range (soft to hard), or Vegetation range (soft to hard).

**Change the Vegetation Colors**

The Vegetation Color menu changes the colors used to display vegetation on the view. The color range is shown in the AC Live Color bar and is affected by the Min Vegetation and Max Vegetation settings. See *Adjust the Vegetation Range* for more information.

1. From the AutoChart Live menu, select Vegetation Options.
   - Press the RIGHT Cursor key.
2. Select Vegetation Color.
3. Select a palette.
Select an Installed GPS Receiver

The GPS Receiver Override menu is available when more than one GPS receiver is installed and detected by the control head. If GPS Receiver Override is set to Auto, the control head will select a GPS receiver automatically. To manually select a GPS receiver, follow the instructions in this section.

**NOTE:** If the control head is connected to an Ethernet network, this menu is not available. In this situation, use the Network Source Setup dialog box to select a GPS source. For more information, download the Ethernet manual from our Web site at humminbird.com.

1. **Main Menu (Advanced User Mode):** Press the MENU key twice. Select the **Nav** tab.
2. Select GPS Receiver Override.
3. Select a GPS installation location.

Set the GPS Output Frequency

GPS Output controls the frequency at which data from the GPS Receiver is sent to the control head. Select 10 Hz to receive the most GPS updates on the display.

1. **Main Menu (Advanced User Mode):** Press the MENU key twice. Select the **Setup** tab.
2. Select GPS Output.
3. Press the RIGHT or LEFT Cursor keys to select a setting.

Turn on/off GPS GLONASS

Use the following instructions to use GLONASS.

1. **Main Menu (Advanced User Mode):** Press the MENU key twice. Select the **Setup** tab.
2. Select GPS GLONASS.
3. Select On or Off.
Turn on/off NMEA 0183 Output

NMEA Output should be turned on if you connect the NMEA Output wires of an accessory GPS receiver (external) or heading sensor cable to another NMEA-compatible device, such as an autopilot. See the accessory guide for details. Accessory guides can be downloaded from our Web site at humminbird.com.

1. **Main Menu (Advanced User Mode):** Press the MENU key twice. Select the **Setup** tab.
2. Select NMEA 0183 Output.
3. Select On or Off.

If NMEA 0183 Output is turned on, the following sentences are output:

<table>
<thead>
<tr>
<th>Message</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>APB</td>
<td>Heading/Track Controller [Autopilot] Sentence &quot;B&quot; [navigation only]</td>
</tr>
<tr>
<td>BWR</td>
<td>Bearing &amp; Distance to Waypoint - Rhumb Line [navigation only]</td>
</tr>
<tr>
<td>DPT</td>
<td>Depth</td>
</tr>
<tr>
<td>GGA</td>
<td>Global Positioning System Fix Data</td>
</tr>
<tr>
<td>GLL</td>
<td>Geographical Position - Latitude/Longitude</td>
</tr>
<tr>
<td>MTW</td>
<td>Water Temperature</td>
</tr>
<tr>
<td>RMB</td>
<td>Recommended Minimum Navigation Info [navigation only]</td>
</tr>
<tr>
<td>RMC</td>
<td>Recommended Minimum Specification GNSS Data</td>
</tr>
<tr>
<td>VTG</td>
<td>Track Made Good &amp; Ground Speed</td>
</tr>
<tr>
<td>ZDA</td>
<td>Time &amp; Date</td>
</tr>
</tbody>
</table>

Configure the NMEA Talker ID

Use the following instructions to change the NMEA 0183 Talker ID to match the NMEA 0183 installed accessory.

1. **Main Menu (Advanced User Mode):** Press the MENU key twice. Select the **Setup** tab.
2. Select Configure NMEA Talker ID.
**Start the Timer**

1. **Main Menu:** Press the MENU key twice. Select the **Alarms** tab.
2. Select Timer Setup. Press the RIGHT Cursor key.
3. Use the Cursor Control key to set the hours, minutes, and seconds.
4. To start the Timer immediately, select Start. Press the RIGHT Cursor key.
   To save your settings and start the Timer at a later time, select Save. Press the RIGHT Cursor key.

   ![NOTE: The Timer can be displayed as a digital readout. See Views: Display Digital Readouts.]

**Change the Display Language**

The available languages are determined by your Humminbird model.

![WARNING! Do NOT enable Asian Mode if you do not require Asian languages. Before you select Asian Mode, contact Customer Service for important information.]

1. **Main Menu:** Press the MENU key twice. Select the **Setup** tab.
2. Select Language.
3. Press the RIGHT or LEFT Cursor keys to select a language.

**Change Digital Readout Formats**

Use the following instructions to customize the format for the digital readouts displayed on the control head. See **Views: Display Digital Readouts** for more information.

**Change the Digits Format**

If you have Digital Readouts set to Boxes, you can change how the numbers are displayed.

1. **Main Menu [Advanced User Mode]:** Press the MENU key twice. Select the **Setup** tab.
2. Select Digits Format.
3. Press the RIGHT or LEFT Cursor keys to select a format.

**Change Units of Measurement**

1. **Main Menu:** Press the MENU key twice. Select the **Setup** tab.
2. Select Units - Depth, Units - Distance, Units - Speed, etc., and select each unit setting as you prefer.
3. **Close:** Press the EXIT key.

   ![NOTE: The Units - Temp menu is only available in an international model.]
Apply an Offset to a Digital Readout

Use the following instructions to adjust the digital readout by the offset amount entered.

1. **Main Menu [Advanced User Mode]:** Press the MENU key twice. Select the Setup tab.
2. Select one of the following menus. Use the RIGHT or LEFT Cursor keys to adjust the offset.

<table>
<thead>
<tr>
<th>Depth Offset</th>
<th>Adjusts the depth digital readout by the amount entered. To read the depth from the waterline, enter a positive vertical measurement. To read the depth from the keel, enter a negative amount.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Temp. Offset</td>
<td>Adjusts the temperature digital readout by the amount entered.</td>
</tr>
<tr>
<td>Speed Calibration</td>
<td>Adjusts the speed digital readout by the amount entered. Speed paddlewheel accessory required.</td>
</tr>
</tbody>
</table>

Change the Latitude/Longitude Format

1. **Main Menu [Advanced User Mode]:** Press the MENU key twice. Select the Setup tab.
2. Select Position Format.
3. Press the RIGHT or LEFT Cursor keys to select a format.

Change the Time and Date Format

1. **Main Menu [Advanced User Mode]:** Press the MENU key twice. Select the Setup tab.
2. Select one of the following menus. Press the RIGHT or LEFT Cursor keys to select a format.

<table>
<thead>
<tr>
<th>Local Time Zone</th>
<th>Select your time zone.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Daylight Saving Time</td>
<td>To add one hour to the time displayed in the local time zone, select On.</td>
</tr>
<tr>
<td>Time Format</td>
<td>Select a time format. International models only.</td>
</tr>
<tr>
<td>Date Format</td>
<td>Select a date format. International models only.</td>
</tr>
</tbody>
</table>

**Turn off Demonstration Mode**

The control head will start demonstration mode if a start up mode is not selected when the unit is first turned on (see **Getting Started**). If the screen is displaying tips, menus, and views automatically, it is in Demonstration mode. Use the following instructions to turn off Demonstration mode.

**NOTE:** Menu settings cannot be saved in Demonstration mode.

1. **Main Menu:** Press the MENU key twice. Select the Setup tab.
2. Select Demonstration.
**Adjust the Backlight**

1. Press the POWER key.
2. Select Light.
3. Adjust the Backlight setting from Dim to 10 (brightest).

**Start Standby Mode**

To conserve power while the control head is not in-use, start Standby mode.

1. Press the POWER key.
2. Select Standby.
3. Press the RIGHT Cursor key.
4. **Turn off**: Press the POWER key.

**Restore System Defaults**

Use the following instructions to reset ALL menu settings to the factory defaults.

⚠️ **CAUTION!** Use this menu with caution!

1. **Main Menu**: Press the MENU key twice. Select the **Setup** tab.
2. Select Restore Defaults.
3. Press the RIGHT Cursor key.
4. Follow the on-screen prompts to confirm the reset.
Register your product at humminbird.com so that you will receive the latest Humminbird news and software updates for your Humminbird model. You can also download HumminbirdPC, which allows you to manage your waypoints, routes, and tracks on your personal computer.

If your control head model does not include a microSD or SD card slot, you can use HumminbirdPC to update the control head software. Visit humminbird.com for details.

**NOTE:** It is important to back up your control head’s data files (waypoints, routes, tracks, groups, recordings, etc.) periodically. Data files should also be saved to your PC before restoring the unit’s defaults or updating the software. See Manage your Navigation Data: Import/Export Navigation Data and Manage Screen Snapshots and Recordings for more information. Also, contact Humminbird Customer Service with any questions.

Required Equipment: Personal computer with Internet access, and a formatted microSD or SD card. See HELIX Control Head for compatibility details.

Register your Humminbird Products

Register your Humminbird product and sign up to receive the latest Humminbird news, including software updates and new product announcements.

1. Go to our Web site at humminbird.com and click Support > Register your Product.
2. Follow the on-screen instructions to register your product.

Update the Control Head Software

Use the following instructions to download software updates from humminbird.com.

1. Install a formatted microSD or SD card into the slot on your PC.
2. Download: Click Support > Software Updates. The available software updates are listed as Downloads under each product.
   - Under Downloads, click the file name. Confirm the file name is for your control head model.
   - Read the instructions in the dialog box and select Download.
   - Follow the on-screen prompts to save the software file to the microSD or SD card.
3. Install the microSD or SD card with the updated software file into the control head card slot.
4. Power On: The control head will recognize the new software and run through a series of prompts to confirm the software installation.
Your control head is designed to provide years of trouble-free use with very little maintenance. Use the following procedures to ensure your Humminbird continues to deliver top performance.

**Control Head Maintenance**

It is important to consider the following precautions when using your Humminbird control head:

- Chemicals, such as those found in bug spray and sunscreen, may cause permanent damage to the control head screen. Such damage is not covered by the warranty.
- NEVER leave the control head in a closed car or trunk. The high temperatures generated in hot weather can damage the electronics.
- When the control head is not in use, cover the unit with the control head cover.
- Repairs should be performed only by an authorized technician.

Use the following information to keep the control head and screen clean.

- **Screen**: To clean the control head screen, use a mild soap (such as a non-abrasive liquid hand soap) and warm water. Wipe the screen dry with a soft cloth. Be careful to avoid scratching the screen. If water spots remain, use a solution of water and vinegar.
  - **WARNING!** Do not use a chemical glass cleaner on the screen. Chemicals in the solution may cause cracking in the lens of the unit.
  - **NOTE**: Do not wipe the screen while dirt or grease is on the screen.

- **Control Head**: If the control head comes into contact with salt spray, wipe the affected surfaces with a cloth dampened with fresh water.

**Transducer Maintenance**

Use the following information to maintain the transducer operation.

- If your boat remains in the water for long periods of time, algae and other marine growth can reduce the effectiveness of the transducer. Periodically clean the face of the transducer with a mild, marine-safe and plastic-safe soap or solution.
  - **NOTE**: To clean the transducer, you may need to pivot the transducer up in the bracket.

- If your boat remains out of the water for a long period of time, it may take some time to wet the transducer when it is returned to the water. Small air bubbles can climb to the surface of the transducer and interfere with proper operation. These bubbles dissipate with time, or you can wipe the face of the transducer with your fingers after the transducer is in the water.
Troubleshooting

Before contacting Humminbird Customer Service, please read the following section. Taking the time to review these troubleshooting guidelines may allow you to solve a performance problem yourself, and therefore avoid sending your unit back for repair.

**Control Head Doesn’t Power Up**
If your control head doesn’t power up, use the installation guide to confirm the following:

- the power cable is properly connected to the control head
- the power cable is wired correctly, with red to positive battery terminal and black to negative terminal or ground
- the fuse is operational
- the battery voltage of the power connector is at least 12.2 Volts

Correct any known problems, including removing corrosion from the battery terminals or wiring, or replacing the battery if necessary. Also, visit humminbird.com to download our Power Troubleshooting Guide.

**Control Head Doesn’t Detect the Connected Transducer**
A connected and functioning transducer will automatically be detected by the control head. The control head will default to the transducer that was included with your unit and automatically select sonar settings based on the transducer’s capabilities. If, when you power up the control head, it does not automatically select sonar settings or display sonar data, even though a transducer is already connected, this means that the control head is not detecting the transducer. Perform the following troubleshooting tasks:

- Using the transducer installation guide, check to make sure that the transducer cable is securely connected to the control head. Reconnect if necessary, and power up the unit again to see if this fixes the problem.
- Replace the non-functioning transducer with a known good transducer if available and power up the control head again.
- Check the transducer cable. Replace the transducer if the cable is damaged or corroded.

**Control Head Doesn’t Detect a Connected Accessory**
A connected and functioning accessory will automatically be detected by the control head. If you connected an accessory to the control head and the accessory is not detected by the control head, try the following:

- Check to make sure that the accessory cable is securely connected to the control head. Reconnect the cable, if necessary.
- Confirm the accessory is connected to a stable and reliable power source.
- **Entire System Restart**: Power off all control heads and connected equipment. Wait 10 seconds, and then power on all equipment.
# Display Problems

There are several main conditions or sources of possible interference that may cause problems with the quality of the information displayed on the control head. Look in the following table for some symptoms of display problems and possible solutions:

<table>
<thead>
<tr>
<th>Display Problems</th>
<th>Possible Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>The control head loses power at high speeds.</td>
<td>If the power output of your boat’s engine is unregulated, the control head may be protecting itself using its over-voltage protection feature. Make sure the input voltage does not exceed 20 Volts.</td>
</tr>
<tr>
<td>When the boat moves at higher speeds, the bottom disappears or suddenly weakens, or the display contains gaps.</td>
<td>The transducer position may need to be adjusted. A mix of air and water flowing around the transducer [cavitation] may be interfering with the interpretation of sonar data. See the transducer installation guide for instructions to adjust the transducer position. Electrical noise from the boat’s engine may be interfering with sonar reception. See <em>Finding the Cause of Noise</em> for more information.</td>
</tr>
<tr>
<td>There are no fish detected, even when you know they are in the water under the boat, or sonar readings seem weak or faulty.</td>
<td>Sonar readings may be affected if the transducer is not positioned correctly [such as mounted at an angle, not straight down], or there is some kind of mechanical interference, either because it is mounted inside a hull that is too thick for proper sonar transmission, the bond between the transducer and the hull is not airtight, or because the transducer is dirty. See the transducer installation guide to adjust the transducer position, and make sure the transducer is clean. Low battery voltage may be affecting the power of signal transmission. Electrical noise from the boat’s engine may be interfering with sonar reception. See <em>Finding the Cause of Noise</em> for more information.</td>
</tr>
</tbody>
</table>

# Finding the Cause of Noise

Electrical noise usually affects the display with many black dots at high speeds, and high sensitivity readings. See the table below for possible sources that can cause noise or interference.

<table>
<thead>
<tr>
<th>Possible Source of Noise</th>
<th>Isolation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Other electronic devices</td>
<td>Turn off any nearby electronic devices to see if the problem goes away, then turn them on one at a time to see if the noise re-appears.</td>
</tr>
<tr>
<td>The boat’s engine</td>
<td>To determine whether the boat’s engine is the source of the noise, increase the RPMs while the boat is in neutral and stationary to see if the noise increases proportionately. If the noise appears when you rev the engine, the problem could be the spark plugs, alternator, or tachometer wiring. Replace the spark plugs with resistor plugs, install an alternator filter, or route the control head power and transducer cables away from the engine wiring.</td>
</tr>
<tr>
<td>Cavitation from the boat’s propeller</td>
<td>Turbulence created by the propeller can cause noise. Confirm the transducer has been properly installed according to its specific mounting requirements [see the transducer installation guide for details]. Also, make sure that the water flows smoothly over the face of the transducer at all times.</td>
</tr>
</tbody>
</table>

**NOTE:** Humminbird verifies maximum stated depth in saltwater conditions, but actual depth performance may vary due to transducer installation, water type, thermal layers, bottom composition, and slope.

**NOTE:** Product specifications and features are subject to change without notice.
HELIX 5 CHIRP GPS G2

Control Head
- Display Size (diagonal): 5 inches [127 mm]
- Pixel Matrix: WVGA 480 x 800
- Display Type: TFT Color
- Backlight: LED
- Communication: NMEA 0183
- Power Input: 10 to 20 VDC
- Current Draw: 600 mA
- IPX Rating: IPX7 Waterproof/Submersible @ 1 m for 30 minutes

CHIRP DualBeam PLUS Transducer
- XNT 9 20 T (includes built-in temperature probe)
  - Operating Frequency: 200 kHz, 83 kHz
  - Depth Capability: 1500 ft [457 m]
  - Area of Coverage: 60°@-10 dB in 83 kHz, 20°@-10 dB in 200 kHz
  - Power Output [MAX]: 500 Watts (RMS), 4000 Watts (Peak to Peak)

**NOTE:** Humminbird verifies maximum stated depth in saltwater conditions, but actual depth performance may vary due to transducer installation, water type, thermal layers, bottom composition, and slope.

**NOTE:** Product specifications and features are subject to change without notice.

**NOTE:** Humminbird verifies maximum stated depth in saltwater conditions, but actual depth performance may vary due to transducer installation, water type, thermal layers, bottom composition, and slope.

**NOTE:** Product specifications and features are subject to change without notice.
# HELIX 7 CHIRP MEGA SI GPS G3

## Control Head
- **Display Size [diagonal]**: 7 inches [178 mm]
- **Pixel Matrix**: WVGA 480V x 800H
- **Display Type**: TFT Color
- **Backlight**: LED
- **Communication**: NMEA 0183
- **Power Input**: 10 to 20 VDC
- **Current Draw**: 850 mA
- **IPX Rating**: IPX7 Waterproof/Submersible @ 1 m for 30 minutes

## CHIRP MEGA Side Imaging Transducer
### XNT 9 HW MSI 150 T [includes built-in temperature probe]

### Side Imaging
- **Operating Frequency**: 455 kHz, MEGA
- **Depth Capability**
  - 455 kHz: 480 ft [146 m]
  - MEGA: 250 ft [76 m]
- **Area of Coverage**
  - 455 kHz: 75° @ -10 dB in 455 kHz
  - MEGA: 75° @ -10 dB in MEGA kHz
- **Power Output [MAX]**: 500 Watts [RMS], 4000 Watts [Peak to Peak]

### Down Imaging
- **Operating Frequency**: 455 kHz, MEGA
- **Depth Capability**
  - 455 kHz: 125 ft [38 m]
  - MEGA: 75 ft [23 m]
- **Area of Coverage**
  - 455 kHz: 75° @ -10 dB in 455 kHz
  - MEGA: 75° @ -10 dB in MEGA kHz
- **Power Output [MAX]**: 500 Watts [RMS], 4000 Watts [Peak to Peak]

### Dual Spectrum
- **Default Operating Frequency**: 150 kHz - 220 kHz
- **Depth Capability**: 1000 ft [305 m]

- 800 kHz: 45° @ -10 dB in 800 kHz
- MEGA: 75° @ -10 dB in MEGA kHz
Power Output (MAX) .......................................................... 500 Watts (RMS), 4000 Watts (Peak to Peak)

Dual Spectrum

Default Operating Frequency .......................................................... 150 kHz - 220 kHz
Depth Capability .............................................................. 1000 ft [305 m]
Area of Coverage ..............................................................
- Full: 42°@-10 dB in 150-220 kHz
- Wide: 42°@-10 dB in 140-200 kHz
- Narrow: 25°@-10 dB in 180-240 kHz
Power Output (MAX) .......................................................... 500 Watts (RMS), 4000 Watts (Peak to Peak)

NOTE: Humminbird verifies maximum stated depth in saltwater conditions, but actual depth performance may vary due to transducer installation, water type, thermal layers, bottom composition, and slope.

NOTE: Product specifications and features are subject to change without notice.
### HELIX 9 CHIRP MEGA SI+GPS G3N

**Control Head**

- Display Size (diagonal): 9 inches (228.6 mm)
- Pixel Matrix: WVGA 480V x 800H
- Display Type: TFT Color
- Backlight: LED
- Communication: NMEA 0183, Ethernet
- Power Input: 10 to 20 VDC
- Current Draw: 1.9 A
- IPX Rating: IPX7 Waterproof/Submersible @ 1 m for 30 minutes
- Bluetooth Frequency Range: 2402 to 2480 MHz
- Bluetooth Output Power: 10 dBm Typical

**CHIRP MEGA Side Imaging+ Transducer**

**XM 9 HW MSI T** *(includes built-in temperature probe)*

#### Side Imaging

- Operating Frequency: 455 kHz, 800 kHz, MEGA
- Depth Capability:
  - **455 kHz**: 800 ft (244 m)
  - **800 kHz**: 250 ft (76 m)
  - **MEGA**: 400 ft (122 m)
- Area of Coverage:
  - **455 kHz**: 86° @ -10 dB in 455 kHz
  - **800 kHz**: 86° @ -10 dB in 800 kHz
  - **MEGA**: 86° @ -10 dB in MEGA kHz
- Power Output (MAX): 500 Watts (RMS), 4000 Watts (Peak to Peak)

#### Down Imaging

- Operating Frequency: 455 kHz, 800 kHz, MEGA
- Depth Capability:
  - **455 kHz**: 400 ft (122 m)
  - **800 kHz**: 125 ft (38 m)
  - **MEGA**: 200 ft (61 m)
- Area of Coverage:
  - **455 kHz**: 75° @ -10 dB in 455 kHz
  - **800 kHz**: 45° @ -10 dB in 800 kHz
  - **MEGA**: 75° @ -10 dB in MEGA kHz
- Power Output (MAX): 500 Watts (RMS), 4000 Watts (Peak to Peak)
## Dual Spectrum

- **Default Operating Frequency**: 150 kHz - 220 kHz
- **Depth Capability**: 1000 ft (305 m)
- **Area of Coverage**:
  - **Full**: 42°@-10 dB in 150-220 kHz
  - **Wide**: 42°@-10 dB in 140-200 kHz
  - **Narrow**: 25°@-10 dB in 180-240 kHz
- **Power Output [MAX]**: 500 Watts [RMS], 4000 Watts [Peak to Peak]

**NOTE:** Humminbird verifies maximum stated depth in saltwater conditions, but actual depth performance may vary due to transducer installation, water type, thermal layers, bottom composition, and slope.

**NOTE:** Product specifications and features are subject to change without notice.

### HELIX 10 CHIRP GPS G2N

#### Control Head
- **Display Size [diagonal]:** 10.1 inches (256.5 mm)
- **Pixel Matrix:** WSVGA 600V x 1024H
- **Display Type:** TFT Color
- **Backlight:** LED
- **Communication:** NMEA 0183, Ethernet
- **Power Input:** 10 to 20 VDC
- **Current Draw:** 1.5 A
- **IPX Rating:** IPX7 Waterproof/Submersible @ 1 m for 30 minutes
- **Bluetooth Frequency Range:** 2402 to 2480 MHz
- **Bluetooth Output Power:** 10 dBm Typical

#### CHIRP DualBeam PLUS Transducer
**XNT 9 20 T [includes built-in temperature probe]**
- **Operating Frequency:** 200 kHz, 83 kHz
- **Depth Capability:** 1500 ft [457 m]
- **Area of Coverage:** 60°@-10 dB in 83 kHz, 20°@-10 dB in 200 kHz
- **Power Output [MAX]:** 500 Watts (RMS), 4000 Watts [Peak to Peak]

**NOTE:** Humminbird verifies maximum stated depth in saltwater conditions, but actual depth performance may vary due to transducer installation, water type, thermal layers, bottom composition, and slope.

**NOTE:** Product specifications and features are subject to change without notice.
**Control Head**

- **Display Size [diagonal]**: 10.1 inches (256.5 mm)
- **Pixel Matrix**: WSVGA 600V x 1024H
- **Display Type**: TFT Color
- **Backlight**: LED
- **Communication**: NMEA 0183, Ethernet
- **Power Input**: 10 to 20 VDC
- **Current Draw**: 2.7 A
- **IPX Rating**: IPX7 Waterproof/Submersible @ 1 m for 30 minutes
- **Bluetooth Frequency Range**: 2402 to 2480 MHz
- **Bluetooth Output Power**: 10 dBm Typical

**CHIRP Down Imaging Transducer**

**XNT 9 DI T** [includes built-in temperature probe]

**Down Imaging**

- **Operating Frequency**: 455 kHz, 800 kHz
- **Depth Capability**: 350 ft (107 m)
- **Area of Coverage**: 75° @ -10 dB in 455 kHz, 45° @ -10 dB in 800 kHz
- **Power Output [MAX]**: 500 Watts [RMS], 4000 Watts [Peak to Peak]

**DualBeam PLUS**

- **Operating Frequency**: 200 kHz, 455 kHz
- **Depth Capability**: 600 ft (183 m)
- **Area of Coverage**: 28° @ -10 dB in 200 kHz, 16° @ -10 dB in 455 kHz
- **Power Output [MAX]**: 500 Watts [RMS], 4000 Watts [Peak to Peak]

**NOTE**: Humminbird verifies maximum stated depth in saltwater conditions, but actual depth performance may vary due to transducer installation, water type, thermal layers, bottom composition, and slope.

**NOTE**: Product specifications and features are subject to change without notice.
HELIX 10 CHIRP DI GPS G2N (CHIRP MEGA DI)

Control Head
- Display Size [diagonal] 10.1 inches (256.5 mm)
- Pixel Matrix WSVGA 600V x 1024H
- Display Type TFT Color
- Backlight LED
- Communication NMEA 0183, Ethernet
- Power Input 10 to 20 VDC
- Current Draw 2.7 A
- IPX Rating IPX7 Waterproof/Submersible @ 1 m for 30 minutes
- Bluetooth Frequency Range 2402 to 2480 MHz
- Bluetooth Output Power 10 dBm Typical

CHIRP MEGA Down Imaging Transducer
XM 9 MDI T [includes built-in temperature probe]

Down Imaging
- Operating Frequency 455 kHz, 800 kHz, MEGA

- Communication ......................................................... NMEA 0183, Ethernet
- Power Input ........................................................... 10 to 20 VDC
- Current Draw ......................................................... 3.3 A
- IPX Rating ............................................................. IPX7 Waterproof/Submersible @ 1 m for 30 minutes
- Bluetooth Frequency Range ........................................ 2402 to 2480 MHz
- Bluetooth Output Power ............................................. 10 dBm Typical

**Dual Spectrum 2D CHIRP Transducer**
**XNT 9 HW T** [includes built-in temperature probe]
- Default Operating Frequency ....................................... 150 kHz - 220 kHz
- Depth Capability ...................................................... 1000 ft [305 m]
- Area of Coverage .....................................................
  - **Full:** 42°@-10 dB in 150-220 kHz
  - **Wide:** 42°@-10 dB in 140-200 kHz
  - **Narrow:** 25°@-10 dB in 180-240 kHz

- Power Output [MAX] .................................................. 500 Watts [RMS], 4000 Watts [Peak to Peak]

**NOTE:** Humminbird verifies maximum stated depth in saltwater conditions, but actual depth performance may vary due to transducer installation, water type, thermal layers, bottom composition, and slope.

**NOTE:** Product specifications and features are subject to change without notice.
HELIX 12 CHIRP MEGA DI+ GPS G3N

Control Head

Display Size (diagonal) ........................................... 12.1 inches (307.3 mm)
Pixel Matrix .................................................. WXGA 800V x 1280H
Display Type .................................................. TFT Color
Backlight .................................................. LED
Communication ................................................. NMEA 0183, Ethernet
Power Input .................................................. 10 to 20 VDC
Current Draw .................................................. 3.3 A
IPX Rating .................................................. IPX7 Waterproof/Submersible @ 1 m for 30 minutes
Bluetooth Frequency Range .................................. 2402 to 2480 MHz
Bluetooth Output Power ..................................... 10 dBm Typical

CHIRP MEGA Down Imaging+ Transducer

XM 9 HW MDI T [includes built-in temperature probe]

Down Imaging

Operating Frequency ............................................ 455 kHz, 800 kHz, MEGA
Depth Capability ............................................
455 kHz: 400 ft [122 m]
800 kHz: 125 ft [38 m]
MEGA: 200 ft [61 m]
Area of Coverage ............................................
455 kHz: 75° @ -10 dB in 455 kHz
800 kHz: 45° @ -10 dB in 800 kHz
MEGA: 75° @ -10 dB in MEGA kHz
Power Output (MAX) ............................................ 500 Watts (RMS), 4000 Watts (Peak to Peak)

Dual Spectrum

Default Operating Frequency .................................. 150 kHz - 220 kHz
Depth Capability ............................................ 1000 ft [305 m]
Area of Coverage ............................................
Full: 42°@-10 dB in 150-220 kHz
Wide: 42°@-10 dB in 140-200 kHz
Narrow: 25°@-10 dB in 180-240 kHz
Power Output (MAX) ............................................ 500 Watts (RMS), 4000 Watts (Peak to Peak)

NOTE: Humminbird verifies maximum stated depth in saltwater conditions, but actual depth performance may vary due to transducer installation, water type, thermal layers, bottom composition, and slope.

NOTE: Product specifications and features are subject to change without notice.

STATEMENTS AND ACKNOWLEDGEMENTS

ENVIRONMENTAL COMPLIANCE STATEMENT: It is the intention of Johnson Outdoors Marine Electronics, Inc. to be a responsible corporate citizen, operating in compliance with known and applicable environmental regulations, and a good neighbor in the communities where we make or sell our products.

WEEE compliance may not be required in your location for electrical & electronic equipment (EEE), nor may it be required for EEE designed and intended as fixed or temporary installation in transportation vehicles such as automobiles, aircraft, and boats. In some European Union member states, these vehicles are considered outside of the scope of the Directive, and EEE for those applications can be considered excluded from the WEEE Directive requirement.

This symbol (WEEE wheelie bin) on product indicates the product must not be disposed of with other household refuse. It must be disposed of and collected for recycling and recovery of waste EEE. Johnson Outdoors Marine Electronics, Inc. will mark all EEE products in accordance with the WEEE Directive. It is our goal to comply in the collection, treatment, recovery, and environmentally sound disposal of those products; however, these requirements do vary within European Union member states. For more information about where you should dispose of your waste equipment for recycling and recovery and/or your European Union member state requirements, please contact your dealer or distributor from which your product was purchased.

Linux Operating System

NOTE: This product uses the Linux operating system. This portion of the software is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version. This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. Humminbird
678 Humminbird Lane
Eufaula, AL 36027

*NOTE: A copy of the Linux operating system is not required to upgrade your fishing system. The Humminbird application software and control head include a separate service warranty. Please see humminbird.com and the separate warranty card included with your unit for details.
FCC Notice

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: [1] this device may not cause harmful interference, and [2] this device must accept any interference received, including interference that may cause undesired operation.

CAUTION! This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

RF Exposure Compliance: This device has been evaluated and found compliant in accordance with EU EN 62479:2010 and EN 62311:2008 for human RF exposure.

This product has been so constructed that the product complies with the requirement of Article 10[2] as it can be operated in at least one Member State as examined and the product is compliant with Article 10[10] as it has no restrictions on putting into service in all EU member states.

EU Declaration of Conformity: Hereby, Humminbird declares that this device is in compliance with the essential requirements and other relevant provisions of Directive 2014/53/EU. The declaration of conformity may be consulted at https://www.humminbird.com/Category/Support/FAQ/EU_DoC/.

Class B Device (Broadcasting and communication equipment for home)

This equipment is home use (Class B) electromagnetic wave suitability equipment and to be used at home and it can be used in all areas.

End User License Agreement

This Hydrographic Database is the proprietary and confidential property of Johnson Outdoors Marine Electronics. Unauthorized use, including the copying of this Hydrographic Database, is expressly prohibited. BY USING THE PRODUCT YOU ARE AGREEING TO BE BOUND BY ALL THE TERMS AND CONDITIONS OF THE JOHNSON OUTDOORS (“LICENSOR”) LICENSE AGREEMENT (“AGREEMENT”) WHICH IS PROVIDED WITH THIS LAKEMASTER DIGITAL MAP PRODUCT (“LICENSED PRODUCT”) INCLUDING, WITHOUT LIMITATION, THE USE RESTRICTIONS, WARRANTY DISCLAIMER AND LIMITATIONS OF LIABILITY SET FORTH HEREIN. Under the Agreement, you have a limited, non-exclusive, personal license to use the data contained on the media in this package, on a GPS mapping device for supplemental navigation reference purposes. Licensor and its third-party suppliers retain all rights to the Licensed Product not expressly granted by the Agreement. You are responsible for using official government charts and prudent navigation for safe travel. The Licensed Product and the accompanying documentation are copyrighted works of authorship and contain valuable secret and confidential information proprietary to Licensor and its third-party suppliers who retain the ownership of the information and all copyrights and other proprietary rights therein. You agree to exercise reasonable efforts to protect their proprietary interests. You may NOT modify, adapt, translate, reverse engineer, decompile, disassemble, sub license, rent, lease, or sell any portion of the Data. You may NOT create derivative works based upon the Data. You may NOT place the Data onto a server so that it is accessible via a public network such as the Internet.

Licensor and its third-party suppliers do not warrant the Licensed Product will meet your requirements or that its operation will be uninterrupted or error-free. In no event will Lakemaster or its suppliers be liable to you for any consequential or incidental damages. Some states or jurisdictions do not allow the exclusion or limitation of consequential or incidental damages, so the above limitations may not apply to you.
