Breaker Accessories

The term breaker accessories refer to any of a number of parts that enhance the functionality or appearance of our breakers. These can be something as simple as a breaker boot or cover, or something more complex such as a lockout slide. Our breaker accessories include other useful items as well such as Phillips head screw sets, breaker guards, and even bare bus bars. All of these items work to better the performance of a breaker. Although our breaker accessories are designed to work with breakers, some are specific to "A" frame breakers or "C" frame breakers.

Function

Breaker accessories enhance the functionality of various switch bodies

Types of Accessories

 Breaker Lock Outs

 Adapter Plates

 Handle Boots

EL-DBLBOOT	Clear, Mounts Front Panel, "ON/OFF"	"C" Series Dbl. Pole

PHILLIPS HEAD SCREWS

PART NUMBER	DESCRIPTION	FOR USE WITH
EGF-6-32-375	Black, Pan/Phillips-head, 3/8" long	"A" or "C" Series Breakers
EGF-6-32-3125	Black, Pan/Phillips-head, 5/16" long	"A" or "C" Series Breakers

SERIES "A" BREAKER ACCESSORIES

PART NUMBER	DESCRIPTION	
EG6-GUARD	Fits all "A" Frame Breakers. Mounts on the surface of the panel with two (2) 6-32 x 3/8" screws, which are included. Protects critical function circuits from being accidentally switched off at the breaker.	
EG-SLIDE	Fits all Double Pole "A" Frame circuit breakers. AC Lockout slides allow only one breaker to be activated at a time. EG-SLIDE uses circuit breaker mounting screw holes, no special modifications required.	
EG-EL	Pacer Group's Adapter Plate, "A" Frame to "C" Frame Cutout is a simple method to make an A-frame breaker fit into a C-frame cutout. By using our Adapter Plate, "A" Frame to "C" Frame Cutout you can quickly and easily fit an A-frame breaker into a cutout hole of a C-frame breaker.	
EBB-B	Tin plated copper bus bar is designed for "A" frame panel mount breakers. Bus will link the line side of the breakers instead of wire jumpers. Holes are 3/4" on center and are for #8 or #10 screws.
